ZONE 29 COMMENCES ORE PRODUCTION

The Directors of View Resources Limited ("View") are pleased to announce the first ore production from its Zone 29 nickel mine in Kambalda. The initial ore has been mined from the 1303 ore drive with an ore width of approximately 1.5 metres of massive nickel sulphide grading 12.4% Ni. The initial exposure was particularly pleasing given that the ore body model indicated an ore width of 2.0 metres grading 3% Ni.

The Zone 29 decline was commenced in March 2004. Production rates are planned to progressively increase until the mine reaches full production rate of approximately 4000 tonnes per month in December 2004.

The first ore delivery from Zone 29 will be made to WMC's Kambalda concentrator later this month.

Yours faithfully

Derek Lenartowicz
Managing Director

Note: In accordance with Listing Rule 5.10 of the Australian Stock Exchange Limited, the geological information in this announcement has been compiled by View Resources Limited Managing Director, Derek Lenartowicz (mining engineer) and the Company's Chief Geologist, Geoff Chapman who is a member of the Australian Institute of Mining and Metallurgy.
