

FUTURE
METALS

PGM Project Developer with Ni-Cu-PGE Discovery Potential

ASX | AIM: FME

Investor Presentation | February 2023

Disclaimer

This Presentation has been prepared as a summary only and does not contain all information about Future Metals NL ("Future" or "FME" or the Company) assets and liabilities, financial position and performance, profits and losses, prospects and rights and liabilities. The information in this Presentation and made to you verbally is subject to updating, completion, revision, further verification and amendment without notice.

The information contained in this Presentation or subsequently provided to the Recipient of this Presentation whether orally or in writing by or on behalf of FME or its employees, agents or consultants is provided to the Recipients on the terms and conditions set out in this notice. The purpose of this Presentation is to provide Recipients with Information relating to FME. The Presentation has been prepared by FME and each Recipient must make his/her own independent assessment and investigation of FME and its business and assets and should not rely on any statement or the adequacy and accuracy of any Information contained in this Presentation.

FME makes no representation or warranty (express or implied) as to the accuracy, reliability or completeness of the Information FME and its directors, employees, agents and consultants shall have no liability (including liability to any person by reason of negligence or negligent misstatement) for any statements, opinions, information or matters (express or implied) arising out of, contained in or derived from, or for any omissions from the Presentation, except liability under statute that cannot be excluded.

The performance and operations of FME may be influenced by a number of factors, many of which are outside the control of FME. No representation or warranty, express or implied, is made by FME or any of its directors, officers, employees, advisers or agents that any intentions, expectations or plans will be achieved either totally or partially or that any particular rate of return will be achieved. This Presentation does not constitute in any way an offer or invitation to subscribe for securities in FME pursuant to the Corporations Act.

Statements regarding FME's plans with respect to its mineral properties are forward looking statements. There can be no assurance that FME's plans for development and or sale of its mineral properties will proceed as currently expected. There can also be no assurance that FME will be able to confirm the presence of mineral deposits, that any mineralisation will prove to be economic or that a mine will successfully be developed on any of FME's mineral properties.

The information in this report that relates to Exploration Results is based on, and fairly represents, information compiled by Mr Shane Hibbird, who is a Member of the Australasian Institute of Geoscientists. Mr Hibbird is a consultant of the Company and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a competent person as defined in the 2012 Edition of the "Australasian Code for reporting of Exploration Results, Exploration Targets, Mineral Resources and Ore Reserves" (JORC Code). Mr Hibbird consents to the inclusion in this report of the matters based upon his information in the form and context in which it appears.

The information in this announcement that relates to Metallurgical Results is based on, and fairly represents, information compiled by Mr Grant Harding, a Competent Person who is a Member of the Australian Institute of Mining and Metallurgy. Mr Harding is a consulting metallurgist of Independent Metallurgical Operations Pty Ltd (IMO), a specialist metallurgical consultancy. Mr Harding has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a competent person as defined in the 2012 Edition of the "Australasian Code for reporting of Exploration Results, Exploration Targets, Mineral Resources and Ore Reserves" (JORC Code). Mr Harding consents to the inclusion in this announcement of the matters based upon his information in the form and context in which it appears.

The information in this announcement that relates to Mineral Resources is based on, and fairly represents, information compiled by Mr Brian Wolfe, who is a Member of the Australian Institute of Geoscientists. Mr Wolfe is an external consultant to the Company and is a full time employee of International Resource Solutions Pty Ltd, a specialist geoscience consultancy. Mr Wolfe has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a competent person as defined in the 2012 Edition of the "Australasian Code for reporting of Exploration Results, Exploration Targets, Mineral Resources and Ore Reserves" (JORC Code). Mr Wolfe consents to the inclusion in this announcement of the matters based upon his information in the form and context in which it appears.

References may have been made in this announcement to certain past ASX announcements, including references regarding exploration results. For full details, refer to the referenced ASX announcement on the said date. The Company confirms that it is not aware of any new information or data that materially affects the information included in these earlier market announcements.

Metals for a Sustainable Future

Panton hosts the perfect suite of metals to support the growing demand from manufacturers of catalytic convertors, hydrogen electrolyzers and fuel cells, and batteries.

Development Optionality

High-grade & bulk tonnage support staged development pathway.

Ni-Cu-PGE

Discovery Potential

Large sulphide system being uncovered around existing Resource in previously untested prospective zones.

Top Tier Jurisdiction

Significant opportunity for diversification of PGM supply away from Russia and South Africa.

Project Delivery De-Risked

Metallurgical solution in place. Capitalising on significant sunk cost of prior owners and technical progress to build Australia's first PGM operation

Corporate Overview

BOARD OF DIRECTORS

Justin Tremain (Non-Executive Chairman)

- Experienced company director with extensive expertise across the mineral resources sector
- Current MD of West African gold explorer Turaco Gold (ASX:TCG), Non-Executive Director of Caspin Resources (ASX:CPN)

Allan Mulligan (Non-Executive Director)

- Experienced mining engineer and company director
- +35yrs experience in mining operations, mine start-up and construction of large-scale platinum and gold mines
- Previously technical oversight role at Panton in early 2000's

Elizabeth Henson (Non-Executive Director)

- Experienced board representative with expertise in governance and finance
- PriceWaterhouseCoopers senior international private tax partner and director based in London

Robert Mosig (Non-Executive Director)

- Experienced geologist with +30yrs
- Experience in platinum group metals, gold and diamond exploration
- Involved in early exploration of Panton

MANAGEMENT TEAM

Jardee Kininmonth (Managing Director and CEO)

- Experienced corporate finance and mining professional
- Prior roles at mining private equity fund EMR Capital, and Galaxy Resources
- Multi-commodity experience, with extensive experience in managing cross-functional teams and working with projects across the mining life cycle.

Andrew Shepherd (GM - Project Development)

- Qualified mining professional with +25yrs experience
- Previously manager of technical services at St Barbara
- Planning, development and implementation of complex, global, multi-discipline mining projects

Barbara Duggan (Principal Geologist)

- Geologist with +20yrs experience in mineral exploration
- Extensive experience in Australia and Canada with a focus on nickel sulphide and magmatic hydrothermal mineral systems specialising in integrated mineral systems targeting at a district to deposit scale

Shane Hibbird (Exploration Manager)

- Geologist +30yrs exploration experience covering PGMs, gold, base metals, coal, oil and gas, mineral sands and other industrial minerals throughout Australia and Asia
- Senior geologist for Platinum Australia during resource drill-out of Panton

Dr Jon Hronsky (Senior Exploration Advisor)

- +35yrs experience in global mineral exploration with a focus on magmatic layered intrusives
- Targeting work led to discovery of West Musgrave nickel sulfide province
- Consultant to major mining companies for past 15 years – previously head of generative exploration at BHP and global geoscience leader for WMC Resources

Hydrogen Applications Expected to Fuel Future PGM Demand

Traditional Demand

* Source: Johnson Matthey PGM Market Report May 2022

- Industrial applications are expected to increase – i.e., Pt use in Chinese glass production
- World Platinum Investment Council expects investment (bullion and coin) forecast to swing to a net demand position
- Other demand includes 333koz relating to pollution control

Demand for platinum from hydrogen based applications is expected to grow by 100% in 2023* as government initiatives supporting the clean energy transition drive significant investment in the hydrogen and fuel cell industry:

- US Inflation Reduction Act of 2022 ("IRA")
- EU set to take similar measures

* Source: Metals Focus

PGM Intensity

(g per vehicle)

ICE

Hybrid

Fuel Cell

ICE and hybrid vehicles require 3-7g of PGM while Fuel Cell vehicles require up to 25g

Hydrogen (Fuel Cell) Economy

~25g of PGM/ vehicle

~30g of PGM/ vehicle

* Source: "Strategy Update", Anglo American Platinum, 22 February 2021 & Future Metals analysis

TOYOTA

CEO says "silent majority" question whether the automotive industry should limit itself to one option (EVs)

HYUNDAI

Europe President and CEO says "we need both technologies (battery and fuel cells...maybe its not going to be so easy to have the electricity grid that can support everyone having EVs. That's the advantage of hydrogen"

CEO says hybrid models should have a greater role in the transition to zero-emission vehicles. "Forcing a transition to electric vehicles, which are more expensive than fossil-fuel or hybrid equivalents, will make car ownership unaffordable for many"

Supply Concentrated in Russia and South Africa

1. PGMs are a scarce metal

Ex- South Africa PGMs are much less abundant than metals such as lithium & copper

* Source: Underlying data for charts are sourced from the annual United States Geological Survey Mineral Commodity Summary Publications and based on Future Metals analysis of this data

2. Supply is highly concentrated to Russia and South Africa

3. South Africa supply environment is challenged due to power availability, labour relations, deepening mines and aging infrastructure

Location and Infrastructure

A Well Serviced and Active Mining Region

Port Facilities

Hydropower

Multiple Mining Operations

Sealed Airstrip

Great Northern Highway

Mineral Resource Estimate

MRE consists of high-grade reef and surrounding bulk mineralisation

- **129Mt** @ 1.20g/t PGM_{3E}, 0.19% Ni, and 154ppm Co (**1.66g/t PdEq¹**)
- Containing 5.0Moz PGM_{3E}, 239kt Ni, and 20kt Co (6.9Moz PdEq¹)

High-grade reef portion

- **25Mt @ 3.57g/t PGM_{3E}**, 0.24% Ni, and 192ppm Co (3.86g/t PdEq¹);
- Containing 2.9Moz PGM_{3E}, 60kt Ni, and 5kt Co (3.2Moz PdEq¹);
- MRE covers only 5.1km of 12km of mapped outcropping chromite reefs
- Bulk (open pit) mineralisation reported to a depth of ~150m, high-grade up to ~800m

Significant growth potential along strike and at depth for higher grade and lower grade mineralisation

¹ Refer appendix for palladium equivalent (PdEq) calculation

Project Delivery Strategy

Supplying sustainable Platinum-Group-Metals from a stable mining jurisdiction

Ore Sorting to Unlock Panton

Ore sorting to drive increased mining inventory, improved metallurgical performance and decreased capex

- High recoveries of chromite ore leading to improved feed grade for milling, reducing opex and capex
- Unlocks previously subeconomic mining stopes due to dilution
- 'Cleans' ore ahead of flotation, removing significant gangue which inhibits flotation conditions

Green Metals Production

- **Scoping activities underway with Lifezone, developer of the Kell Process;** a robust hydrometallurgical process purpose built for processing PGM concentrates
- **Vastly improves economics** by increasing payabilities, decreasing logistics costs, while also enabling production of low CO₂ products
- Prior test work of Kell Process on Panton concentrate **demonstrated recoveries of over 99% for Pt, Pd, Ni and Cu and ~93% for Au and Co**
- Kell Process plant currently **under development at the Sedibelo Platinum Mine in South Africa**
- Produces upgraded metals products which can be directly sold to refiners, providing a key input for **clean energy technologies such as cathodes, electrolyzers and catalytic convertors**

High Recoveries Typically 95%+ for Pt, Pd, Rd, Au, Ni, Co 	Lower capital and operating costs Capex 18%-33% of smelting Opex: 51%-66% of smelting 	Low electricity consumption 13%-46% of smelting 
Environmentally friendly Low CO ₂ emissions, no SO ₂ emissions, low water use 	Metallurgical Fewer constraints on concentrate quality than smelting 	Efficient Concentrate to metals in one process, on one site, in less than 2 weeks 
Scalable Range in capacity from 50kozpa to 2,000kozpa 	Equipment and unit operations Well proven and commonly utilised metallurgical plants 	Specifications of products Selected to suit marketing and site location requirements 

Source: Kell hydrometallurgical extraction of precious and base metals from flotation concentrates – Piloting, engineering and implementation advances

Project Delivery De-Risked

Future Metals has capitalised on the significant sunk cost and learnings of prior owners to progress development of Panton. Scoping study is drawing on:

- **Metallurgical solution** in place with multiple product options, underpinned by consistent results and bulk testing
- **>50,000m of drilling** and associated data to draw from
- **Granted Mining Leases**
- Prior flora, fauna & heritage surveys demonstrating **no red flags**
- Prior **underground mining trials** and bulk metallurgy sample recovery in 2002 and 2007 via 400m decline
- Prior detailed design work on non-process infrastructure and TSF

Portal decline during stoping trial, 2002.

Jumbo developing through chromite, 2002.

Panton Geology

- 12km long, 2.5km wide and 1.7km thick layered mafic-ultramafic intrusion
- Folded into a south-westerly plunging synclinal structure with extensive cross faulting
- Two distinct mineralised layers in stratigraphy, the Main Zone and the Lower Zone

- Main Zone is predominantly Reef-style mineralisation and hosts current MRE
 - Analogous to Merensky and UG2 reefs of Bushveld system
- Lower Zone is lower part of stratigraphy, close to the basal contact and feeder conduit – considered more prospective for Ni-Cu-PGE sulphides
 - Contact style analogies include Platreef & Julimar. Conduit analogies include Nova-Bollinger, Voisey's Bay & Nebo-Babel

Three sub-parallel chromitite reefs & surrounding dunite bulk mineralisation included in MRE, with bulk mineralisation estimated to only 150m

- A Zone | 1,500m north-south strike, dipping 30-400 west
- B & C Zone | 2,100m south-west strike, subvertical dip
- D Zone | 1,500m north-east strike, dipping 600 north-west
- Combined strike length of 5.1km and 'open'**

For more information on Future Metals Exploration Model for Panton, please view the video with Dr. Jon Hronsky, Senior Exploration Advisor:

Ni-Cu Sulphide Targets

- 2022/23 drill campaign **first time Ni-Cu sulphides** have been explored for at Panton – **confirmed presence of broad disseminations**
- Shallow embayment feature (BC1) identified** under cover coincident from coincident anomalies across magnetics, soils, stream sediments and drilling
- Ni-Cu sulphide 'hot spot'** defined – awaiting DHEM and final deep drill hole results to define follow up work

Panton North

- Secured highly prospective and strategic ground adjacent to the Panton project through a farm-in and JV agreement with Octava Minerals
- Panton North prospect is an extension of the Panton sill with a **large, exposed basal contact position**
 - Coincident remnant magnetic inversion anomalies and anomalous copper in soils in **untested NE position**
 - Surficial drilling has returned broad zones of highly anomalous PGEs, Ni and Cu
- Panton West is an **untested narrow chonolith structure** with **coincident anomalies** across HoistEM, magnetics, soil samples and rock chips
- Interpreted embayment feature runs across tenement boundary
- Additional **adjacent land position provides increased development flexibility** for developing the Panton project

Delivering Value Through Sustainable Development

Creating a positive case study for community engagement in the East Kimberley

- Creating a genuine partnership with the Traditional Owners; the Malarngowem people
- Ongoing reciprocal education to build trust and acceptance
- Commitment to provide economic opportunities in line with project maturity
- Hiring from local towns, now and into the future

Environmental stewardship

- Minimise impact where possible; from exploration activities through to construction & operations
- Work with regulators and Traditional Owners so community expectations are managed and met
- Sustainability at the core of project development decisions; renewable power, water usage & recycling, Scope 3 emissions, end users products

Why Invest in Future Metals?

Panton hosts the perfect suite of metals to support the growing demand from manufacturers of catalytic convertors, hydrogen electrolyzers and fuel cells, and batteries.

**Significant
resource base**

**Development
optionality**

**Project delivery de-
risked**

**Large Ni-Cu sulphide
discovery potential**

**Top tier
jurisdiction**

In-Situ Value Per Tonne Contribution

	Mass				Grade				
	(Mt)	Pd(g/t)	Pt(g/t)	Au(g/t)	PGM3E (g/t)	Ni (%)	Cu (%)	Co (ppm)	PdEq (g/t)
Reef	25.4	1.71	1.61	0.24	3.57	0.24	0.07	192	3.86
Dunite	103.4	0.31	0.25	0.07	0.62	0.17	0.03	145	1.12
Total	128.9	0.58	0.52	0.10	1.20	0.19	0.04	154	1.66

Metal recoveries used in the value per tonne calculations are shown below (same as PdEq inputs):

- Reef: Palladium 80%, Platinum 80%, Gold 70%, Nickel 45%, Copper 67.5% and Cobalt 60%
- Dunite: Palladium 70%, Platinum 70%, Gold 70%, Nickel 45%, Copper 67.5% and Cobalt 60%

Assumed metal prices used are also shown below:

- Palladium US\$1,700/oz, Platinum US\$1,300/oz, Gold US\$1,700/oz, Nickel US\$18,500/t, Copper US\$9,000/t and Cobalt US\$60,000/t

Palladium Equivalent Calculation

Palladium Metal Equivalents

Based on metallurgical test work completed on Panton samples, all quoted elements included in the metal equivalent calculation (palladium, platinum, gold, nickel, copper and cobalt) have a reasonable potential of being ultimately recovered and sold.

Metal recoveries used in the palladium equivalent (PdEq) calculations are in the midpoint of the range of recoveries for each element based on metallurgical test work undertaken to date at Panton. It should be noted that palladium and platinum grades reported in this announcement are lower than the palladium and platinum grades of samples that were subject to metallurgical test work (grades of other elements are similar).

Metal recoveries used in the palladium equivalent (PdEq) calculations are shown below:

- Reef: Palladium 80%, Platinum 80%, Gold 70%, Nickel 45%, Copper 67.5% and Cobalt 60%
- Dunite: Palladium 70%, Platinum 70%, Gold 70%, Nickel 45%, Copper 67.5% and Cobalt 60%

Assumed metal prices used are also shown below:

- Palladium US\$1,700/oz, Platinum US\$1,300/oz, Gold US\$1,700/oz, Nickel US\$18,500/t, Copper US\$9,000/t and Cobalt US\$60,000/t

Metal equivalents were calculated according to the follow formula:

- Reef: $\text{PdEq (Palladium Equivalent g/t)} = \text{Pd(g/t)} + 0.76471 \times \text{Pt(g/t)} + 0.875 \times \text{Au(g/t)} + 1.90394 \times \text{Ni(\%)} + 1.38936 \times \text{Cu(\%)} + 8.23 \times \text{Co(\%)}$
- Dunite: $\text{PdEq (Palladium Equivalent g/t)} = \text{Pd(g/t)} + 0.76471 \times \text{Pt(g/t)} + 0.933 \times \text{Au(g/t)} + 2.03087 \times \text{Ni(\%)} + 1.481990 \times \text{Cu(\%)} + 8.80 \times \text{Co(\%)}$
