Notice Regarding Preliminary Monthly KPIs for the Energy Business (Electricity Retail Business)

Remixpoint, inc. (the "Company") has been receiving interest and inquiries from shareholders and investors regarding the outlook for fuel prices, wholesale electricity market prices, and the power procurement environment, against a backdrop of geopolitical risks, including the situation in the Middle East, and fluctuations in crude oil prices.

While the Company's Energy Business (electricity retail business) is impacted by these changes in the market environment, we strive to achieve both a stable power supply and profitability. We do this through the comprehensive management of power procurement (such as market procurement and bilateral contracts), the design of pricing and contract terms, and supply-demand and risk management. To help stakeholders better understand the Company's response to the current market environment, we hereby announce the key preliminary KPIs for the Energy Business for April and May 2026, as detailed below.

1. Purpose of this disclosure

In light of the interest from shareholders and investors regarding the current electricity market environment, the Company is disclosing key KPIs for April and May 2026 to provide a clearer understanding of the trends in the business scale and customer base of our Energy Business. This disclosure presents quantitative KPIs for the most recent two months aggregated using consistent definitions. It is not intended to indicate full-year financial results or the profitability of any specific business.

- Target period: April and May 2026
- Disclosed items: Number of contracts, electricity sales volume

Furthermore, the Company Group will continue to appropriately disclose KPIs and other information that contribute to investment decisions, in accordance with the unique characteristics of each business.

2. Preliminary monthly KPIs for the disclosed items

Item		April 2026	YoY change	May 2026	YoY change
No. of contracts	High-voltage	3,215	**+58.4%**	3,456	**+66.1%**
	Low-voltage (Corporate)	32,961	**+69.6%**	33,628	**+67.5%**
	Low-voltage (Individual)	26,929	**+89.4%**	27,168	**+82.0%**
Electricity sales volume (10,000 kWh)	High-voltage	6,370	**+43.1%**	7,512	**+65.4%**
	Low-voltage (Corporate)	1,357	**+38.3%**	1,254	**+42.8%**
	Low-voltage (Individual)	460	**+46.8%**	398	**+54.0%**

Notes:
1. The number of contracts represents the total active contracts as of the end of each respective month.
2. Electricity sales volume represents the actual figures for each month.
3. The above figures are preliminary and may differ from the final figures to be confirmed at a later date.

3. Business environment and performance

In April and May 2026, the Energy Business saw year-over-year increases in both the number of contracts and electricity sales volume, reflecting a steady expansion of our customer base. Meanwhile, current wholesale electricity market (JEPX) prices and fuel prices are fluctuating due to geopolitical factors, including the situation in the Middle East. To appropriately manage the impact of such price volatility, the Company is undertaking the following: (1) diversifying its procurement portfolio by combining market procurement and bilateral contracts; (2) appropriately managing pricing plans and contract terms, including both market-linked and fixed-rate options; and (3) integrally operating supply-demand management and risk management. Through these initiatives, we strive to maintain a stable supply to our customers and sustain our business foundation, even amid fluctuating market prices.

Please note that monthly profit and loss figures represent information prior to formal accounting procedures and are subject to change depending on electricity market prices and other factors. Therefore, this preliminary report discloses only quantitative KPIs (number of contracts and electricity sales volume). Profit and loss figures will be disclosed through our quarterly financial reports. Going forward, the Company will continue to comprehensively manage demand trends, its procurement portfolio, and pricing strategies, aiming to secure stable earnings while properly managing market volatility.

4. Future outlook

These preliminary figures are based on information available at this time and have not been audited or reviewed through quarterly financial closing procedures. The figures are subject to change depending on future financial closing procedures and other variables.

In addition, because the Energy Business is affected by various factors—including electricity market prices, fuel prices, weather conditions, demand trends, and the procurement environment—the results for April and May 2026 alone do not imply full-year financial trends or suggest any revisions to the financial forecasts.

At present, there are no changes to the consolidated financial forecasts announced on June 11, 2026, in the “Announcement of Consolidated Earnings Forecasts for the Fiscal Year Ending March 31, 2027.” If any revisions to the forecasts become necessary in the future, the Company will promptly disclose them.
