Uppsala March 4 , 2013

Biotage AB (publ) through its subsidiary MIP Technologies AB submits Food Contact Notification (FCN) to U.S. Food and Drug Administration (FDA)

Biotage acquired MIP Technologies in 2010 to gain access to world class development capabilities of custom designed molecular imprinted and other novel polymers. Following the acquisition Biotage has invested in the industrialization of MIP Technologies' business operations. MIP Technologies is in the process of developing a range of Industrial Resins for use within food and related industries.

MIP Technologies has now submitted a Food Contact Notification (FCN) to U.S. Food and Drug Administration (FDA) for the product RENSA™ 101, which may be used for removal of unwanted impurities in flavoring oils that are used in food. The approval process with the FDA is expected to be finalized in Q2 2013.

"There is such a great need for products that can enhance food security by taking out substances that might be harmful to human. I am really pleased to see that we are part of that movement. It is yet early days for RENSA 101, but we hope that this product eventually will be commercialized in an industrial scale setting. We believe in this business and we will continue to invest. ", says Torben Jörgensen, CEO & President of Biotage.

Biotage discloses the information provided herein pursuant to the Swedish Securities Markets Act and/or the Swedish Financial Instruments Trading Act. The information was submitted for publication at 10.00 on Monday 4 March 2013.
