

Lindab receives EUR 1.3 million order for chilled beams to Italy

Lindab's Comfort division has received an order valued at approximately EUR 1.3 million for chilled beams.

This is the third order valued above one million Euros that Lindab has received for its chilled beams in the past seven months.

The order is for the new headquarters of Regione Lombardia in Milan, a spectacular 160 metre high tower, designed by Henry Cobb. The building, Italy's tallest, will comprise 114,000 square metres of offices, an auditorium, exhibition space, restaurants, underground parking and will be surrounded by a public park.

The *Pilot* chilled beam is characterised by its minimalist design and flexible airflow adjustment. "We are very pleased to see that our efforts in product development are paying off," says Frank Ankersen, Manager for Lindab's Comfort division. "Finding the right solutions together with our customers is key to our success. For the Regione Lombardia project, we have integrated lighting to provide a good architectural solution."

"Products that meet architectural as well as technical and energy efficiency requirements will be even more important in the future. The large orders for prestigious projects that we have received over the past months show that we more than satisfy these requirements," concludes Frank Ankersen,

The order will be delivered during 2009.
