FPC has received an order for approx. 1M sensors for Asian smartphones

Fingerprint Cards AB (FPC) has received another order of close to 1M units for its swipe sensor technology for the Asian smartphone and tablet market for immediate delivery.

"So far we have announced the launch of three mobile phone launches, in Japan, Korea and China. This new order targets these phones, but also the additional ten or more phones and tablets we expect to launch during the remainder of 2013," says Johan Carlström, President and CEO of Fingerprint Cards AB.

About Fingerprint Cards AB (publ)

Fingerprint Cards AB (FPC) markets, develops and produces biometric components and technologies that through the analysis and matching of an individual's unique fingerprint verify the person's identity. The technology consists of biometric sensors, processors, algorithms and modules that can be used separately or in combination with each other. The competitive advantages offered by the FPC's technology include unique image quality, extreme robustness, low power consumption and complete biometric systems. With these advantages and the ability to achieve extremely low manufacturing costs, the technology can be implemented in volume products such as smart cards and mobile phones, where extremely rigorous demands are placed on such characteristics. The company's technology can also be used in IT and Internet security, access control, etc.
