

Nederman receives order for over SEK 30 million (€3.3'') from Stena Aluminium

The order is for new investments in Stena Aluminium's smelter in Älmhult, Sweden. Nederman will supply the plant with solutions for the filtration of the fumes generated in the smelting of returned aluminium products.

"Our operations are important especially for the environment, but there is also a growing industrial demand for recycled aluminium. It is therefore a major advantage that we are now almost doubling our production. The investments mean that the impact we have on the environment, despite increased production will be lower than it is today and we will also remove the local discomfort of odours from production," says Staffan Persson, Managing Director of Stena Aluminium.

The smelter is the only one in Sweden that produces aluminium from recycled materials and Stena Aluminium is investing around SEK 200 million in the years to come in order to upgrade the plant, both environmentally and in terms of capacity.

The purification of the flue gases will be carried out in several stages, with the first additive bicarbonate and activated carbon being used to react with acidic components and dioxins. Then the gases will pass through the two filter systems from Nederman separating dust and reaction products. The purified gases will via a combustion chamber (RTO) be directed to the chimney. The project is run by the Swedish sales company Nederman Sverige AB and the filter systems are manufactured by Nederman's production site in Friesenheim, Germany.

"We are very proud to receive this order from Stena Aluminium, it is a good example of our expertise in industrial air filtration. The order also shows that Nederman's market offering has become stronger through the acquisition of Dantherm Filtration," says Sven Kristensson, CEO, Nederman.

Facts about Nederman

Nederman is one of the world's leading companies supplying products and services in the environmental technology sector focusing on industrial air filtration and recycling. The company's products and systems are contributing to reducing the environmental effects from industrial production, to creating safe and clean working environments and to boosting production efficiency.

Nederman's offering encompasses everything from the design stage through to installation, commissioning and servicing. Sales are carried out via subsidiaries in 29 countries and agents and distributors in over 30 countries. Nederman develops and produces in its own manufacturing and assembly units in Europe, North America and Asia. In April 2010, Dantherm Filtration, with its primary focus on industrial air filtration, was acquired. The Group is listed on Nasdaq OMX, Stockholm; it has about 1400 employees and a turnover of about 2 billion SEK.
