

## Nederman acquires Energy Save Systems Ltd

**The environmental technology company Nederman has today signed and completed a deal to acquire 100% of the shares in English company Energy Save Systems Ltd. Energy Save Systems develops and sell unique software and hardware for monitoring and control of filter systems, that among other things reduces energy consumption, decreases environmental impact and improves filtration performance.**

Energy Save Systems has developed leading technology for energy savings in industrial air filtration processes and the company's product DESA is addressed to businesses who want to improve their air quality and decrease their environmental impact in industrial operations, for example in the wood, plastic, metalworking, food processing, pharmaceutical, welding and casting industries. Through the acquisition, Nederman develops their offering within the environmental and climate area for both existing and new installations.

The acquisition price on a cash and debt free basis, amounts to approximately GBP 1.5 million, with a potential maximum earn-out payment of GBP 1.5 million based on development of the business in the 24 months following closing, and is funded by cash and existing bank facilities. Energy Save Systems Ltd's turnover and profitability are not currently material for the Nederman group.

Energy Save Systems will be part of Nederman's Monitoring & Control Technology Division. Through the acquisition Nederman will access leading technology and strengthen their product offering for all divisions and in all markets.

"Through the acquisition we continue to develop our position as a world leading environmental technology company within industrial air filtration and further improve our product offering by meeting the market's increased need for smart energy saving solutions", says Sven Kristensson, CEO Nederman Group.
