Rejlers contributes to major new data centre in Norway

Europe's most cost-efficient, secure, flexible and green data centre solution is being constructed outside the town of Måløy. Lefdal Mine Datacenter AS is owned by Sogn og Fjordane Energi, a German investor, and an investor group from Måløy.

Rejlers is proud to have been chosen to provide technical assistance to the development project for what is one of Europe's largest, most future-oriented data centres, located in Måløy. With its keen focus on renewable energy, electricity and telecom, Rejlers is set to be a supplier and help realise a leading-edge data centre that promises huge benefits in terms of energy savings and the environment.

– In developing a product for the global market, we are looking to collaborate only with the best and those who have already demonstrated success in major projects. Rejlers has great expertise in the data centre field and we know that we can depend on their high quality, says Jørn Skaane, CEO of Lefdal Mine.
