Rejlers is investigating Leksand's future energy system

The population of Leksand municipality is facing a dramatic increase, something that will require extensive adaptation of existing infrastructure. The energy company, Dala Energi, has therefore commissioned Rejlers to investigate the consequences of increased needs for power and suggest measures for how to dimension and adapt the power grid for future needs.

"I am proud that we can deliver a wide range of services to our customers. The mutual trust and confidence that has developed between Rejlers and our customers, including several assignments for Dala Energi, has led to increased collaboration between regions and business areas which has been positive for both Rejlers and our customers," says Henrik Johansson, Energy Group Manager.

In recent years, Rejlers has undertaken many assignments for Dala Energi in several of their investment areas. Personnel from Rejlers' various business areas and regions have used their knowledge in areas such as transmission, distribution, electricity safety, risk and vulnerability, fibre optics, project management and pilot studies.
