Rejlers helps Lindbäcks to build Europe's most modern production facility

Following a call for tenders, Lindbäcks Bygg has commissioned Rejlers, together with FeRex, to deliver parts of the production facility to be constructed at Lindbäcks' new "Super Factory". Rejlers' order is worth SEK 29.5 million.

The project includes planning and installing an assembly line where Lindbäcks will build complete housing units from preassembled floor joists through to the ready-made unit going out for storage at Lindbäcks' new factory in Haraholmen outside Piteå. The assembly line will be around 300 metres long and will start by receiving preassembled floor joists and finish with completed apartment block elements for transport to the building site.

The new factory will triple Lindbäcks' current capacity and is regarded as the most modern of its type in Europe, maybe the world.

Rejlers will provide expertise in the areas of mechanical engineering, electrical engineering as well as PLC and HMI programming. FeRex, which is a partner in the deal, will build the steel structure and, together with Rejlers, install the equipment on site in the factory.
