

Alligator Bioscience launches ALLIGATOR-FAB™ – a novel human antibody library

Lund, Sweden, December 10, 2020 – Alligator Bioscience (Nasdaq Stockholm: ATORX) today announced the completion of a novel proprietary human synthetic antibody library in Fab (Fragment antigen-binding) format – ALLIGATOR-FAB™. The design of the library and antibody diversity has been optimized to ensure the development of highly functional antibodies with excellent developability properties.

The ALLIGATOR-FAB library is built on multiple antibody backbones with optimal drug development properties to further increase the structural diversity of generated antibodies. The ALLIGATOR-FAB library has been shown to generate pools of highly diverse and functional antibody variants.

“ALLIGATOR-FAB is a great addition to our technology platform and perfectly complements our well-established ALLIGATOR-GOLD® library as well as the bispecific format RUBY™. With the two human antibody libraries at hand, Alligator has the capacity to generate therapeutic mono- and bispecific antibodies against virtually any target”, said Per Norlén, CEO of Alligator Bioscience.

ALLIGATOR-FAB has been key in the generation of the latest drug candidate in Neo-X-Prime, the novel immuno-oncology concept recently launched by Alligator.
