150% increase in resources at East Rand Proprietary Mines Limited

DRDGOLD South African Operations (Pty) Limited (“DRDGOLD SA”), jointly owned by DRDGOLD (74%), Khumo Gold SPV (20%) and an employee empowerment trust (6%), today announced a 150% increase in total resources at its East Rand Proprietary Mines Limited (“ERPM”) operation at Boksburg.

The increase, from 16.58 million ounces at 30 June 2006 to 41.37 million ounces, arises primarily from the addition of:

- 16.74 million inferred resource ounces at an average grade of 5.54 grams per ton in ERPM’s southern lease area; and
- 8.32 million inferred resource ounces at an average grade of 9.06 grams per ton at a stope width of 125 cm in the ERPM Ext 2 area (contiguous to the ERPM Ext 1 prospecting right). This resource relates to 17% of the 5 500 ha covered by the prospecting right.

The additional resources were estimated by ERPM, independent consultants Camden Geoserve and Minxcon, and reviewed by RSG Global.

DRDGOLD SA Chief Executive Officer, Niel Pretorius, paid tribute to the Department of Minerals and Energy (“DME”) both for its granting of a prospecting right over ERPM Ext 2 and for its financial support of an ambitious underground plugging programme to secure ERPM’s Far East Vertical (“FEV”) Shaft from water rising in the Central Witwatersrand Basin.

“Without the DME-backed, three-year plugging programme now nearing completion, FEV Shaft would be lost to flooding; and without FEV Shaft there would be little prospect of ERPM increasing its resources, converting these to reserves and mining the additional ounces into the future,” Pretorius said.

“These ounces, all on the ‘dry’ side of the water barrier, are a lifeline into the future for the mine, a real option with flow-through benefits for all of its stakeholders, not least surrounding community.”

The plugging programme, started in November 2004 and scheduled for completion in October 2007, has involved the construction of eight underground plugs at a total cost of R35 million. The DME has contributed some R22 million, or 63% of the total cost.

EMPEROR ANNOUNCES TOLUKUMA MINE IMPACTED BY POWER GENERATION FAULT

Emperor Mines Limited (ASX: EMP) (“Emperor”) announced today that production at the Tolukuma Gold Mine in Papua New Guinea was likely to be negatively impacted by a transformer failure in part of the hydro-power generation plant at the mine.

Management said that the mine was currently operating on 50% power, after a fault was detected in the generation plant, and would remain so for approximately one week, largely due to the time required for replacement parts to be sent from Western Australia.

Mine management said that milling and other energy intensive activities at the mine had been temporarily halted while repairs were made, however other mining activities are continuing.
