FORM 6-K

**REPORT OF A FOREIGN PRIVATE ISSUER
PURSUANT TO RULE 13a-16 OR 15d-16
UNDER THE SECURITIES EXCHANGE ACT OF 1934**

For August 2007

Commission File Number 0-28800

DRDGOLD Limited

EBSCO House 4
299 Pendoring Avenue
Blackheath
Randburg, South Africa, 2195

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.

Form 20-F ☒ Form 40-F ☐

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes ☐ No ☒

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): N/A

Attached to the Registrant Form 6-K filing for the month of August 2007, incorporated by reference herein:

Exhibit

- 99.1 Release dated August 31, 2007, entitled “PROVISIONAL CONDENSED ANNUAL FINANCIAL STATEMENTS AND REPORT TO SHAREHOLDERS FOR THE QUARTER AND YEAR ENDED 30 JUNE 2007.”

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

DRDGOLD LIMITED

Date: August 31, 2007

By: /s/ Themba Gwebu

Name: Themba Gwebu

Title: Company Secretary

2007 FINANCIAL YEAR

DRDGOLD LIMITED

(Incorporated in the Republic of South Africa) • Registration No. 1895/000926/06
 ARBN 086 277616 • JSE trading symbol: DRD • ISIN Code: ZAE 000058723
 Issuer code: DUSM • NASDAQ trading symbol: DROOY
 ("DRDGOLD" or "the company")

GROUP RESULTS

KEY FEATURES

- Disposal by Emperor of its 20% interest in the Porgera JV completed 17 August
- DRDGOLD SA gold production increases by 7% for the quarter
- DRDGOLD SA attributable resource increases by 33% to 53.9 million ounces
- DRDGOLD SA posts a net profit of R55 million for the year
- Formation of an East Rand gold tailings treatment joint venture with Mintails SA

FORWARD-LOOKING STATEMENTS

Many factors could cause the actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements, including, among others, adverse changes or uncertainties in general economic conditions in the markets we serve, a drop in the gold price, a continuing strengthening of the Rand against the Dollar, regulatory developments adverse to DRDGOLD or difficulties in maintaining necessary licences or other governmental approvals, changes in DRDGOLD's competitive position, changes in business strategy, any major disruption in production at key facilities or adverse changes in foreign exchange rates and various other factors.

These risks include, without limitation, those described in the section entitled "Risk Factors" included in our annual report for the fiscal year ended 30 June 2006, which we filed with the United States Securities and Exchange Commission on 22 December 2006 on Form 20-F. You should not place undue reliance on these forward-looking statements, which speak only as of the date thereof. We do not undertake any obligation to publicly update or revise these forward-looking statements to reflect events or circumstances after the date of this report or to the occurrence of unanticipated events.

OVERVIEW

Dear shareholder

Safety

With sadness I report the death of two DRDGOLD South African Operations ("DRDGOLD SA") employees. Siyakudumisa Qwetsha, a winch driver at ERPM, died in a work-related incident and Mojalefa Semano was fatally injured when a fall of ground occurred at Blyvoor during the quarter under review. Six DRDGOLD SA employees died in work-related incidents during the 2007 financial year compared with five in 2006. This left the company's Fatal Injury Frequency Rate ("FIFR") in 2007 virtually unchanged at 0.21, an unacceptable performance given our drive to achieve zero fatalities. While DRDGOLD SA's Disabling Injury Frequency Rate ("DIFR") for the year declined marginally from 10.81 to 10.46, its Reportable Injury Frequency Rate ("RIFR") rose from 3.81 to 4.75. At an operational level, Blyvoor is worthy of singling out in terms of safety performance during 2007. The mine has received the Minister of Minerals and Energy's Safety Flag award for mines in the ultra-deep gold and platinum category and won the West Rand Mine Managers' Association Inter-mine Safety Competition for the ninth consecutive year with a RIFR of 3.87.

A range of initiatives are in place to improve safety performance at all of DRDGOLD SA's operations and I hope to have more positive news to report on a quarterly basis during the 2008 financial year.

Specific safety reforms at Tolukuma continued during the quarter, with priority given to ensuring safer operating conditions and encouraging safer behaviour by individual employees. In respect of operating conditions, particular attention was given to addressing inadequate and/or high-risk physical conditions by making improvements to ventilation (ventilation capacity increased by 300% during the year) and electrical infrastructure. Management have also introduced improvements to hazard and incident identification and reporting protocols, through the introduction of a formal hazard alert programme, and the implementation of an Incident Investigation system. Both of these initiatives include mechanisms to track actions and outcomes arising from the identification of hazards or other safety risks.

Production

Group gold production for the quarter was 12% lower at 91 067oz, reflecting a 62% drop in Australasian gold production to 10 562oz – a result of the disposal of both the Vatukoula mine in Fiji and the 20% stake in the Porgera Joint Venture ("JV") in Papua New Guinea ("PNG"). Most encouragingly, however, the South African operations increased gold production by 7% to 80 505oz, a consequence of both a return to planned underground production levels at Blyvoor and improved surface production at ERPM.

Group gold production for the year was 10% lower at 477 157oz due to a 33% decline in Australasian gold production resulting both from previously reported operating difficulties at the Australasian operations and the subsequent disposal of Vatukoula and the Porgera JV stake. South African gold production increased by 6%, reflecting progress in our strategy to stabilise operating performance generally.

Reserves and Resources as at 30 June 2007

DRDGOLD's attributable Mineral Resource increased by 14% to 54.2 million ounces and its Ore Reserve decreased by 29% to 6.3 million ounces.

DRDGOLD's attributable Mineral Resource from its South African operations increased by 33% to 53.9 million ounces, of which 6.2 million ounces resulted from the granting of the ERPM Extension 2 prospecting right and 12.4 million ounces related to ERPM's Southern Lease area.

Despite an 11% lower stake in DRDGOLD SA, DRDGOLD's attributable Ore Reserve from its South African operations decreased by only 0.480 million ounces to 6.2 million ounces.

DRDGOLD's attributable Mineral Resource from its Australasian operations decreased by 95%, from 7.0 million ounces to 0.322 million ounces. This decrease was primarily as a result of the disposals of Porgera and the Vatukoula mine.

DRDGOLD's attributable Ore Reserve from its Australasian operations also decreased by 95%, from 2.151 million ounces to 0.108 million ounces, as a result of the disposal of Porgera and the Vatukoula mine.

Financial

Group revenue from continuing operations for the quarter was 13% lower at R449.6 million. While revenue from the South African operations increased by 7% to R381.8 million, revenue from the Australasian operations declined by 56% to R69.5 million. After accounting for Group cash operating costs, which were 11% lower at R404.7 million, Group cash operating profit was 23% lower at R44.9 million. While the South African operations recorded a 4% increase in cash operating profit to R45.1 million, the Australasian operations incurred a loss of R2.4 million compared with the previous quarter's profit of R15.1 million mainly as the result of the sale of the stake in the Porgera JV.

Group revenue from continuing operations for the year was 32% higher at R2 087.7 million but after deducting cash operating costs, which was 41% higher at R1 813.5 million, Group cash operating profit from continuing operations was 8% lower at R274.2 million.

DRDGOLD SA recorded a net profit of R55 million for the year compared to the previous year's net loss of R30 million, while Emperor's net loss for the year was R1 344 million after accounting for the net loss of R1 022 million from the discontinued Vatukoula mine.

Corporate developments

The quarter and the year under review, together with the period immediately after year-end, have all been eventful. At the time of writing, the balance sheet restructuring of Emperor, in which DRDGOLD indirectly holds a 78.72% interest, had been substantially completed. Key elements of this were the afore-mentioned disposal of Vatukoula and the Porgera JV stake.

In South Africa, two exciting joint ventures with Mintails SA (Pty) Limited ("Mintails SA") were announced – one relating to underground exploration for gold and uranium on the West Rand and the other to surface retreatment for the recovery of gold on the East Rand, the focus being incorporation of key elements of the Ergo surface retreatment operation, previously owned by AngloGold Ashanti Limited.

Looking ahead

Notwithstanding various setbacks previously reported, the South African operations are starting to show signs of responsiveness to the stabilisation strategy being applied. Continuing progress on this front –

together with positive development in respect of both brownfields reserve and resource growth and the JVs with Mintails SA – holds promise of a sound platform for further growth in South Africa. A consequence of the Australasian restructuring will be the repatriation to South Africa of significant funds in the form of a capital distribution and loan repayments from the Porgera JV disposal proceeds. This – together with no prospect of further lending to Emperor – will greatly strengthen the DRDGOLD balance sheet going forward, providing impetus for the afore-mentioned anticipated growth in South Africa.

JOHN SAYERS

Chief Executive Officer

NOTES REGARDING FINANCIAL INFORMATION

Note 1 – Summary of significant accounting policies

Basis of preparation

These provisional condensed annual financial statements for the year ended 30 June 2007 have been prepared in accordance with IFRS.

The principal accounting policies adopted in the preparation of the condensed annual financial statements have been consistently applied to all years presented, unless otherwise stated.

	2007 Rm	2006 Rm
Note 2 – Profit on sale of investments		
Profit on sale of investments	82.9	6.5
Profit on reduction of interest in Emperor from 88.3% to 78.72%	–	89.5
	82.9	96.0
Note 3 – Impairments		
Loans	(6.0)	(23.6)
Impairment of assets and investments	(64.8)	–
Reversal of assets and investment in Emperor	–	74.4
Reversal of prior year impairment on investments	–	67.7
	(70.8)	118.5
Note 4 – Derivative instruments		
Gold call options at fair value	6.0	20.8
The current asset represents the positive mark-to-market on gold call options		
Note 5 – Long-term liabilities		
ANZ Banking Group Limited – Emperor loan*	759.0	407.2
Industrial Development Corporation of South Africa Limited*	1.4	19.4
Investec Bank (Mauritius) Limited*	27.8	–
Convertible loan notes	–	490.1
Lease and other	51.2	43.2
	839.4	959.9
Less payable within one year shown under current liabilities	(790.3)	(556.9)
	49.1	403.0

* These long-term liabilities have subsequently been repaid.

Note 6 – Financial liability

Gold forward contracts

– 183.4

Note 7 – Contingencies

The Internal Revenue Commission ("IRC") of PNG has issued tax assessments to Tolukuma Gold Mines Limited ("TGM") for the years 1996 to 2004 in which they have reduced the amount of allowable capital expenditure claimed in respect of these years with a resulting increase in potential tax payable of R16.5 million (PGK6.8 million). TGM has lodged an objection with the IRC in relation to this matter on the grounds that the TGM mine life based on reserves and annual production was in accordance with claims in the tax return. The IRC have allowed the company to defer payment of the assessment until such time as the matter is resolved. No provisions have been recorded in respect of this item in the financial statements as presented in the June 2007 provisional condensed financial statements.

On 13 March 2007, the PNG press published claims by a Dr Kotapu that he had undertaken a study amongst the downstream communities that proved Tolukuma tailings discharge is polluting the river and poisoning local communities. Dr Kotapu claimed that the work had been undertaken under the auspices of two Australian health authorities. Subsequently, it has been confirmed that no Government departments or health authorities, either in PNG or Australia, were involved with Dr Kotapu's alleged work and to date no report has been published by Dr Kotapu.

TGM continues to work with local and international stakeholders on environmental practices, and to communicate with key regulatory and law enforcement bodies about Dr Kotapu and his claims.

Note 8 – Subsequent events

The sale of Emperor's 20% interest in the Porgera Joint Venture to Barrick Gold Corporation was approved by DRDGOLD shareholders and Emperor shareholders at the Extraordinary General Meetings held on 27 July and 30 July 2007 respectively, including the approval of a A\$0.05 cents per share capital distribution by Emperor.

The transaction was completed on 17 August 2007 and subsequently all Emperor debt repaid on 20 August 2007 including the amount of US\$25.8 million paid to DRDGOLD on inter-company loans.

An unaudited pro forma consolidated balance sheet as at 30 June 2007 has been prepared showing the effects of the disposal by Emperor of its indirect 20% interest in the Porgera JV, the repayment of debt and capital distribution to the Emperor shareholders.

Total gold production increased by 14% to 38 291oz, reflecting a 24% rise in underground gold production to 28 036oz. Surface gold production was 8% lower at 10 255oz.

Higher gold production from underground showed recovery from the combined negative effects of the illegal strike action, underground fire and shaft damage in previous quarters and a return to the higher volume/lower grade mine plan. While the average yield was 5% lower at 4.74g/t, throughput was 30% higher at 184 000t.

Lower surface gold production reflected an anticipated 11% decline in average yield as material recovery progressed through a lower-grade area of the reserve. Volume was 4% higher at 932 000t.

Total cash operating costs were 1% lower at US\$563/oz, reflecting a 7% decline in underground cash operating costs to US\$665/oz. Surface cash operating costs rose by 7% to US\$283/oz. Cash operating profit increased by 34% to US\$3.9 million, reflecting both the increase in total gold production and lower total cash operating costs.

The Way Ahead Project ("WAP"), involving the accessing of No 2 Sub-shaft reserves from levels 27 to 35 of No 5 Shaft, continues, with raiseboring between levels 27 and 31 scheduled to begin during the current quarter. Some R3.6 million in capital was spent during the quarter under review on opening up, development, equipment and materials.

Encouraging results were obtained from a drilling programme to define the uranium ("U₃O₈") resource in Blyvoor's slimes dam material. RSG Global (Pty) Limited has been appointed both to audit these results in order to declare a uranium, gold and sulphur surface resource conforming to the SAMREC code, and to define an underground uranium resource.

Crown Consolidated from 1 Dec 2005 (Previously 40% attributable)		Quarter Jun 2007	Quarter Mar 2007	% Change	Quarter Jun 2006	12 months to 30 Jun 2007	12 months to 30 Jun 2006

Represents total operation

Gold production was 2% lower at 22 667oz. While throughput rose by 5% to 2 107 000t, the average yield was 8% lower at 0.33g/t, reflecting the mining out of high-grade sand reserves.

Cash operating costs increased by 3% to US\$507/oz. Cash operating profit was 5% lower at US\$3.6 million due to both lower gold production and higher costs.

During the quarter, reclamation of the 7.64 million tonne 3L2 slimes dam began. Treatment through the Crown plant is scheduled to continue for 24 months at a rate of 270 000t a month, recovering an estimated 115 000oz of gold. A decision on the company's application to the Department of Minerals and Energy ("DME") for a licence to mine the Top Star dump south of Johannesburg's CBD is awaited.

Represents total operation

Total gold production was 6% higher at 19 547oz. While underground gold was 3% lower at 12 410oz, surface gold increased by 25% to 7 137oz.

Underground throughput rose by 11% to 68 000t, reflecting better productivity levels resulting from both improved ventilation and compressed air supply to the eastern longwall area. Faulting below 70 level continued to compromise volume and yield however, the latter declining by 13% to 5.68g/t. As reported previously, this situation is expected to continue for up to nine months, while the faulting is negotiated.

Higher surface gold production reflected both a 16% increase in throughput to 500 000t – a result of upgrades to pumps, pipelines and other infrastructure – and a 7% rise in yield to 0.44g/t.

Total cash operating costs were 6% higher at US\$728/oz due to an 18% increase in underground cash operating costs to US\$840/oz. Surface cash operating costs, however, were 15% lower at US\$535/oz. The total cash operating loss increased from US\$0.7 million to US\$1.2 million.

The plugging project to isolate the mine's Far East Vertical Shaft from water rising in the Central Witwatersrand Basin is scheduled for completion in October. A pumping upgrade to cope with water inflow from the Hercules Basin continues. Pumping at a rate of 60 megalitres a day is scheduled to begin in September, with the pumped water earmarked for use by the Crown retreatment operation. The mine has re-applied to the Government for a pumping subsidy to help offset monthly pumping costs of R1.8 million.

During the quarter, the mine reported a 150% increase in total resources, arising primarily from the addition of 16.74 million inferred resource ounces at an average grade of 5.54 grams per ton in ERPM's southern lease area and 8.32 million inferred resource ounces at an average grade of 9.06g/t in the ERPM Extension 2 area (contiguous to the ERPM Extension 1 prospecting right).

	ZAR million	11.0	9.5	(16)	3.8	46.6	27.3

Total production for the quarter was 49 000t milled at a recovered grade of 6.71g/t which produced 10 561oz. This represents an 11% increase in gold produced over the previous quarter, due largely to a 9% increase in yield despite a strike by employees in April which resulted in five days lost production.

The major impediment to production throughout the year was the inability of the underground mine to deliver sufficient quantities of high grade ore to maintain mill capacity. This was due to the strong safety standards implemented at the mine with the suspension of Gulbadi and then to the cash flow and inventory crisis, which occurred from December to May. As a result of this, much of the mill feed for the year was sourced from low grade surface stockpiles.

In April 2007, Emperor announced the sale of its 20% interest in the Porgera JV to Barrick Gold Corporation. Total consideration for the transaction was US\$250 million plus an additional adjustment amount, paid in cash. The legal effective date of the transaction was 1 April 2007.

The sale was approved by DRDGOLD shareholders and Emperor shareholders at the general meetings held on 27 July and 30 July 2007 respectively. The transaction was completed on 17 August 2007.

In March 2007, Emperor announced that it had signed an agreement to sell all its Fijian assets, including the Vatukoula Mine, to Westech Gold (Pty) Limited, a private company incorporated in Australia. Under the agreement, Emperor sold 100% of its shares in its Australian subsidiaries (Emperor Finance Limited and Emperor Australia Limited) which in turn own the Fijian assets. The sale was completed on 28 March 2007.

EXPLORATION AND DEVELOPMENT

Australasian operations

Papua New Guinea

The company maintains over 5 000km² of exploration tenements in PNG. During the quarter the focus of drilling activity was on Tolukuma Mine Extension and near mine targets. Regional exploration was undertaken on ELs 580, 683, 894 and 1327.

Mine Extension

Drilling on the Zine structure from both surface and underground returned a range of positive results. The most encouraging was in hole ZN093 where a bonanza grade intersection was recorded of 1.66m @ 204.08g/t Au and 63.2g/t Ag. This was followed up with a hole ZN094, which intersected the Zine structure approximately 70m above hole ZN093, and 30m below current development drives, and returned 1.66m @ 63.58g/t Au and 257.3g/t Ag.

Drilling is ongoing in the Fundoot South area located just beyond the southern extent of current mining operations, and at the Kagam area located approximately 250m further south than Fundoot.

Near mine

Drilling has been undertaken at the Banana prospect located 300m west of the Tolukuma vein near where it swings to the south-east near Gulbadi vein.

Considerable work was undertaken at Saki Prospect during the quarter. Saki is located approximately 3km east of the Tolukuma mine and displays many features comparable with the Tolukuma vein array. All historical data has been compiled, additional stream sediment sampling completed and geological mapping and rock chip sampling completed.

PNG: Regional Programme

A soil sampling programme has been completed at Hoyu Prospect located approximately 10km east of Tolukuma in an area exhibiting extensive 'high sulphidation' style alteration. 158 soil samples, on 7 traverses, were collected over an area of 15 X 5km.

On EL894 geological mapping and rock chip sampling was undertaken to further define the area of confluence of the Tolukuma-Sali-ljav faults. This area is located approximately 13km south-east of the Tolukuma mine, and 10km south of the Hoyu prospect. Structures consistent with the Tolukuma-Saki-ljav faults were confirmed on the ground and maximum rock chip assays were 0.6g/t Au and 20g/t Ag.

A three-week programme of mapping and rock chip sampling was compiled at Aikora Prospect on EL1327 located 60km north-east of Tolukuma. 73 samples were collected.

Results have been received from sampling undertaken last quarter on EL1366. Of the 21 samples the highest Au grade was 1.14g/t and separately the highest Ag grade was 69.1g/t.

South Africa**ERPM**

Drilling is in progress from 72 H/W Drive East, to confirm geological faulting and contours ahead of mining. The current depth of the hole is 73.4m, with the major fault intersection expected a further 30m ahead.

Drilling on 66 level Drive West intersected a 30m wide dyke, which was 10m earlier than expected. A footwall was intersected on the other side of the dyke, which suggests a down throw associated with the intrusion. This hole is to be surveyed to confirm geological interpretation. If required, a second hole will be drilled to determine displacement.

ERPM Extension 1 (Sallies)

Drilling is currently concentrated within the current mining lease area to define and firm up on geological structures. We are waiting for a response from the DME regarding the permission for the overtopping of the exploration development.

ERPM Extension 2 (Sallies)

A geological report has been produced, which declares an audited Inferred Resource of 28.576 million tons at 9.06g/t (8.32 million oz) declared.

Blyvoor

During the quarter Blyvoor's slimes dams were drilled and sampled for gold, uranium and sulphur. An audited inferred uranium and gold slimes dam resource will be declared during the 2007/08 financial year.

Composite samples taken from the Metallurgical plant run-of-mill, underground feed, and slimes reclamation, returned encouraging U₃O₈ grades, ranging from 0.05 to 0.09kg/tonne.

An exploration drilling programme linked to opening up and development has been scheduled out. Drilling is expected to commence in September 2007, to evaluate the south-west down dip extension of the ore body south of the Boulder Dyke.

DIRECTORS

(*British) (**Australian) (***)American)

Executive:

JWC Sayers (Chief Executive Officer)

Non-executives:

J Turk ***

Company Secretary:

TJ Gwebu

Alternate:

JH Dissel

Independent non-executives:

RP Hume

GC Campbell* (Non-Executive Chairman)

D Blackmur ** (Senior Non-Executive Director)
