FORWARD LOOKING STATEMENTS

Many factors could cause the actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements, including, among others, adverse changes or uncertainties in general economic conditions in the markets we serve, a drop in the gold price, a sustained strengthening of the Rand against the dollar, regulatory developments adverse to DRDGOLD or difficulties in maintaining necessary licenses or other governmental approvals, changes in DRDGOLD's competitive position, changes in business strategy, any major disruption in production at key facilities or adverse changes in foreign exchange rates and various other factors.

These risks include, without limitation, those described in the section entitled "Risk Factors" included in our annual report for the fiscal year ended 30 June 2017, which we filed with the United States Securities and Exchange Commission on 31 October 2017 on Form 20-F. You should not place undue reliance on these forward-looking statements, which speak only as of the date thereof. We do not undertake any obligation to publicly update or revise these forward-looking statements to reflect events or circumstances after the date of this report or to the occurrence of unanticipated events. Any forward-looking statements and financial information included in this presentation have not been reviewed and reported on by DRDGOLD's auditors.

DEAR SHAREHOLDER

INTRODUCTION

It is very pleasing to report that the improvement in operating and financial performance for the first six months of FY2018, reported in February 2018, was sustained in the ensuing six months to 30 June 2018. Consequently, FY2018, compared with FY2017, was markedly better.

Year-on-year comparisons are drawn below but by way of general comment, gold production was significantly higher, with particularly stronger average yield making the largest contribution to our performance.

Higher grade sand material reclaimed from the 5A9 and 4L30 dumps, reporting to the Knights plant, was the main contributor to improved average yield, offsetting the impact that repeated failures in the power supply – particularly in the second half – had on tonnage throughput.

Cash operating costs were substantially lower, the result of both higher gold production and completion of the rehabilitation of the Crown footprint. This, with the increase in gold production, contributed to much lower all-in sustaining costs (AISC).

Operating profit for the year increased by 38%, a consequence of high gold production and sales and lower costs, despite a 3% decline in the average Rand gold price received to R534 344/kg.

By financial year-end, three important projects – part of our on-going drive to keep the cost line below the revenue line, had been completed:

- ramp-up of reclamation from the 4L50 slimes dam, which is the southern portion of the Elsburg Tailings Complex, bordering Boksburg and Germiston;
- conversion of the Ergo plant's electro-winning circuit to zinc precipitation; and
- the installation at Ergo of two ball mills, reclaimed from the company's Crown plant in order to process higher grade sand at better margins.

The 4L50 slimes dam contains some 20.5Mt of material with an average grade of 0.256g/t. Reclamation and retreatment at a rate of around 450 000tpm over the next four years is expected to result in greater plant stability and thus, efficiency.

Cost savings of between R2 million and R2.5 million a month are expected to result from zinc precipitation, due mainly to a major reduction in the time to complete the final stage of gold recovery – to around three hours from around 18 hours for electro-winning – and from significant cuts in the consumption of caustic soda and cyanide.

The full impact of the centralised water management plant also came through this year, with a reduction in the usage of potable water of 38%.

The two 60 000tpm ball mills from Crown have been moved to the Ergo plant and refurbished at a cost of around R41 million. An estimated 12-15Mt of sand is recoverable from the Benoni Cluster. Over the next five years, 7.3Mt will be targeted for reclamation.

Our acquisition of the bulk of Sibanye-Stillwater's West Rand Tailings Retreatment Project (WTRTP), increasing our reserves by approximately 82%, was completed after the year end. An update on our progress and plans regarding this asset, now known as Far West Gold Recoveries Proprietary Limited (FWGR), appears below.

12 MONTHS ENDED 30 JUNE 2018 VS 12 MONTHS ENDED 30 JUNE 2017

OPERATIONAL REVIEW

Gold production increased by 10% to 4 679kg due to a 13% increase in the average yield to 0.193g/t. Total throughput, however, was 3% lower at 24 281 000t.

Cash operating costs were 6% lower at R458 866/kg.

AISC were 5% lower at R505 622/kg. I elaborate on the reasons for these shifts in my introductory comments above.

FINANCIAL REVIEW

Revenue was 6% higher at R2 490.4 million. Operating profit was 38% higher at R355.2 million after accounting for total cash operating costs, 3% higher at R2 159.7 million. I comment in more detail about these movements in my introduction above.

The operating and AISC margins were 14.3% and 5.5% respectively, compared to 11.0% and 3.2% in the prior year.

Headline earnings were R7 million (1.7 SA cents per share) compared with R0.8 million (0.2 SA cents per share).

Based on the good results for the year, free cash flow of R 93.4 million was generated, in comparison to negative R 45.1 million in the prior year.

SUSTAINABLE DEVELOPMENT

Human capital

The total number of historically disadvantaged people in management, core and critical skills positions continued to grow in 2018 – to 251 (70% of the total workforce) from 242 in 2017 (68% of the total workforce).

Women in mining remained unchanged at 20% of the total workforce. The percentage of women in core positions within the workforce is 12%, exceeding the Mining Charter's requirement of 10%.

Some 1 546 individual training courses took place at a total cost to company of R9.0 million, compared with 1 296 at a total cost to company of R10.3 million in 2017.

Social capital

In 2018, we spent R14.5 million on various community and skills development projects of benefit to communities, mainly within our operating footprint. This compares with R14.3 million in 2017.

Natural capital

Dust: 1 188 samples from sites spanning our total operating footprint were analysed during 2018. There were seven exceedances during this period, representing 0.58% of the total number of measurements, compared with five exceedances in 2017, representing 0.44% of the total number of measurements. The increase was as a result of earthworks in progress on developments being undertaken by other parties, bordering our operational footprint.

The number of exceedances in both 2017 and 2018 were a marked improvement on the 22 exceedances reported in 2016, representing 1.58% of the total number of measurements. The improvement over the past two years is attributable to our continuing programme to vegetate the top surfaces and side slopes of the tailings dams for which we are responsible. Some 35 hectares were vegetated in 2018.

Our total cash spent on environmental rehabilitation for the 2018 financial year amounted to R51.6 million compared with R41.9 million for the 2017 financial year.

Water: We reduced our usage of externally sourced potable water by 38% to 3 377ML, demonstrating the continued efficiency of our new water distribution system completed in 2017. In terms of our agreement with the TCTA, treated acid mine drainage (AMD) water entered our system for the first time in 2017. Our usage of TCTA treated water was approximately 909ML in 2018.

Land: At year-end, applications in respect of 191 hectares of rehabilitated land had been lodged with the National Nuclear Regulator for clearance for redevelopment.

WEST RAND TAILINGS RETREATMENT PROJECT

Post year-end – on 1 August 2018 – we announced completion of our acquisition of the gold assets associated with Sibanye-Stillwater's WRTRP, to be known going forward as FWGR.

This acquisition increases our gold reserves by approximately 82% and – having secured a R300 million revolving credit facility from ABSA Bank Limited (acting through its Corporate and Investment Banking division) – we have already embarked on the first phase of its planned two-phase development.

Phase 1 involves the upgrading of the Driefontein 2 plant to process tailings from the Driefontein 5 dump at a rate of between 400 000 and 600 000tpm and depositing the residue on the Driefontein 4 tailings dam. First production is expected in the first quarter of calendar 2019.

SHORT-TERM PRICE PROTECTION

DRDGOLD wishes to reaffirm its long-term strategy to remain an unhedged gold producer and to keep borrowings to a minimum. However, the development of the first phase of FWGR will necessitate medium term borrowings that will introduce some liquidity risk to the Group. To mitigate this liquidity risk, management traded a zero-cost collar to provide price protection against a possible decrease in the Rand gold price while the borrowings will be in place.

As a result, DRDGOLD is committing 50 000 ounces of gold under a zero-cost collar with a floor of R565 000/kg and a ceiling of just under R609 000/kg, spread equally over the next nine months, and cash-settled at the end of each month.

FINANCIAL YEAR 2019 PRODUCTION AND COST GUIDANCE

For Ergo, during the 2019 financial year, we are planning gold production of between 148 000 and 154 000 ounces at a cash operating cost of approximately R490 000/kg.

LOOKING AHEAD

To the east, our Ergo footprint looks set for improved performance in FY2019 as benefits from the projects described above start to flow.

To the west, we can look forward to FWGR starting to materially contribute to our bottomline by the end of the second half of the financial year.

Niël Pretorius

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

1. BASIS OF PREPARATION

The condensed consolidated financial statements are prepared in accordance with the requirements of the JSE Limited Listings Requirements ("Listings Requirements") for provisional reports and the requirements of the Companies Act of South Africa. The Listings Requirements require provisional reports to be prepared in accordance with the framework concepts and the measurement and recognition requirements of International Financial Reporting Standards (IFRS) and the SAICA *Financial Reporting Guides* as issued by the Accounting Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council and

to also, at a minimum, contain the information required by IAS 34 *Interim Financial Reporting*. The accounting policies applied in the preparation of the condensed consolidated financial statements are in terms of IFRS and are consistent with those applied in the previous consolidated financial statements.

2. RESULTS FROM OPERATING ACTIVITIES

Results from operating activities includes the following:

	Year ended 30 Jun 2018 Reviewed Rm	Year ended 30 Jun 2017 Audited Rm
A. INCREASE IN LONG TERM INCENTIVE SCHEME ("LTI") LIABILITY		
The liability for employee benefits consists mainly of the LTI liability. The increase in the share based payment expense for the current reporting year is mainly due to the continued amortisation of the LTI liability over the vesting period. The decrease in the seven day volume weighted average price (VWAP) of DRDGOLD during the current financial year from R3.82 at 30 June 2017 to R3.71 at reporting date did not have a significant impact on the LTI liability or expense.	17.2	10.0
B. TRANSACTION COSTS		
Costs incurred related to the acquisition of the West Rand Tailings Retreatment Project Assets.	9.0	–
C. DEFERRED TAX RATE ADJUSTMENT		
In South Africa, mining tax on mining income is determined based on a formula which takes into account the profit and revenue from a gold mining company during the year. The formula for determining the South African gold mining tax rate for the years ended 30 June 2018 and 30 June 2017 is: $Y = 34 - 170/X$ where Y is the percentage rate of tax payable and X is the ratio of taxable income, net of any qualifying capital expenditure that bears to mining income derived, expressed as a percentage. For deferred tax purposes the Group applies a forecast weighted average tax rate considering the expected timing of the reversal of temporary differences. Due to the forecast weighted average tax rate being based on the expected future profitability, the tax rate can vary significantly year on year and can move contrary to current year financial performance. The forecast weighted average deferred tax rate increased from 18.6% to 20.3% as a result of a increase in forecast profitability of Ergo. Tax charge/(benefit) due to the change in the forecast weighted tax rate:	12.8	(37.5)
3. EARNINGS PER SHARE		
Reconciliation of headline earnings		
Profit for the year	6.5	13.7
Adjusted for:		
Loss/(profit) on disposal of property, plant and equipment, net of tax	0.5	(12.9)
Headline earnings	7.0	0.8
Weighted average number of ordinary shares in issue adjusted for treasury shares	422 068 696	422 068 696
Diluted weighted average number of ordinary shares adjusted for treasury shares	422 068 696	422 068 696
Earnings per share ⁽¹⁾	1.5	3.2
Diluted earnings per share ⁽¹⁾	1.5	3.2
Headline earnings per share ⁽¹⁾	1.7	0.2
Diluted headline earnings per share ⁽¹⁾	1.7	0.2

⁽¹⁾ All per share financial information is presented in South African cents per share (cps) and is rounded to the nearest one decimal point based on the results as presented which is rounded to the nearest million Rand

4. CASH AND CASH EQUIVALENTS

	Year ended 30 Jun 2018 Reviewed Rm	Year ended 30 Jun 2017 Audited Rm
Included in cash and cash equivalents is restricted cash of:		
Cash held in escrow (including interest) relating to the electricity dispute with Ekurhuleni Metropolitan Municipality (refer note 5 and 7)	114.2	92.7
Guarantees	17.2	16.1

5. OTHER NON-CURRENT ASSET

The payments made under protest to the Municipality (refer note 7) of R22.5 million (excluding VAT), as well as the subsequent payments made to the Municipality comprising the difference between the J-tariff in addition to the Eskom tariff in the amount of R4.9 million is recognised as a non-current asset.

This asset was recognised initially at fair value of R18.6 million, resulting in a difference at initial recognition of R8.8 million, accounted for in finance costs.

The fair value was determined using the income approach present value technique. The calculation was based on the following assumptions:

- discount rate: 11.68% representing the Municipality maximum cost of borrowing on bank loans as disclosed in the 30 June 2017 annual report; and
- discount period: 3 years representing management's best estimate of the date of conclusion of the Main Application.

During the year, finance income of R0.7 million was recognised to account for the effect of unwinding.

6. CONTINGENT LIABILITY: SILICOSIS

The DRDGOLD Respondents (together with each of the Working Group companies) served a notice of appeal to petition the Supreme Court of Appeal ("SCA") against the certification of the Silicosis class and Tuberculosis class and the transmissibility of damage, ordered by the High Court of South Africa in May 2016. The appeal to the SCA was set down for hearing from 19 to 23 March 2018, but was subsequently postponed indefinitely in January 2018, by agreement between the former mineworkers and dependents of the deceased mineworkers ("Applicants") and the Respondent companies. The SCA endorsed and upheld the postponement.

The remaining members of the Working Group have all raised accounting provisions due to progress made by the Working Group towards settlement of the claims. In May 2018, the Working Group announced that a settlement agreement had been reached, subject to certain suspensive conditions, including the approval by the South African High Court after which an effective date of the agreement will be set.

DRDGOLD withdrew from the Working Group in January 2016 and maintains the view that it is too early to consider settlement of the matter, mainly for the following reasons:

- the Applicants have as yet not issued and served a summons (claim) in the matter;
- there is no indication of the number of potential claimants that may join the class action against the DRDGOLD respondents;
- many principles upon which legal responsibility is founded, are required to be substantially developed by the trial court (and possibly subsequent courts of appeal) to establish liability on the bases alleged by the applicants.

In light of the above there is inadequate information to determine if a sufficient legal and factual basis exists to establish liability, and to quantify such potential liability.

7. CONTINGENT LIABILITY AND CONTINGENT ASSET:

EKURHULENI METROPOLITAN MUNICIPALITY ELECTRICITY DISPUTE

In December 2014, Ergo Mining (Proprietary) Limited ("Ergo") instituted legal proceedings by way of an application ("Main Application") against the Ekurhuleni Metropolitan Municipality ("Municipality") and Eskom for an order declaring that Ergo is not supplied electricity by the Municipality and that the Municipality is not authorised to levy a surcharge of 40% ("the D-tariff") to the rate which Eskom ordinarily charges Ergo on its Mega flex rate ("Eskom tariff"). Ergo also instituted a counterclaim against the Municipality for the recovery of the surcharges which were erroneously paid to the Municipality in the *bona fide* belief that they were due and payable prior to the Main Application of approximately R43 million (these surcharges were expensed).

Consequently, and pending a final determination of the Main Application by the High Court, Ergo stopped paying the surcharges to the Municipality, paying and expensing only the Eskom tariff and depositing the difference comprising the D-tariff into its attorneys' trust account as security in favour of the Municipality in the event that the court rules against Ergo. These surcharges were not expensed but recognised under cash and cash equivalents as restricted cash (refer note 4). The Municipality threatened to (effectively instruct Eskom as they cannot do so on their own) discontinue power supply, as a result of which Ergo brought an application for an interim interdict to prohibit the Municipality and/or Eskom from interfering with or causing the power supply to Ergo to be interrupted before the Main Application is adjudicated. In May 2016, the Gauteng Local Division, Johannesburg found in favour of Ergo. On appeal by the Municipality, the Supreme Court of Appeal overturned the interdict in August 2017, following which Ergo petitioned the Constitutional Court for relief in December 2017.

In January 2018, the Constitutional Court rejected (and refused to hear) Ergo's petition for a further appeal.

On the date of the Constitutional Court ruling, the money held in Ergo's attorneys' trust account amounted to approximately R126 million. In February 2018, Ergo paid R25.2 million (including VAT) from the trust account to the Municipality, under protest and without prejudice and/or admission of liability (refer note 5). This amount was the difference between the surcharge of 11% ("the J-tariff") over the Eskom tariff which was recently introduced by the Municipality "*for bulk supplies at medium and high voltage situated in a position designated by the Municipality as close-coupled to the Eskom grid*". The J-tariff, which Ergo still deems to be irregular and disproportionate in accordance with the provisions of the Local Government: Municipal Systems Act, 32 of 2002 ("Systems Act"), was significantly lower than the previously imposed "D-Tariff". The balance, following the payment of the R25.2 million, remains in the trust account of Ergo's attorneys of record. Subsequently, Ergo pays monthly to the Municipality, the amount calculated at J-tariff in respect of its electricity consumption, under protest and without prejudice and/or admission of liability (refer note 5).

Ergo's legal team is confident about the prospects of success in the Main Application as it will demonstrate that the Municipality does not supply electricity to Ergo or in any manner add value to Eskom's supply of electricity to Ergo. Ergo is furthermore, in terms of the Main Application, in addition to its contention that the Municipality does not supply electricity to it and not licensed to supply it, challenging the imposition of the J-tariff and D-tariff on the grounds that they are, *inter alia*, ultra vires and beyond the scope of the Municipality's Electricity By-Laws, the Systems Acts as well the Credit Control and Debt Collection By-Laws.

The Main Application has been set down for hearing on 5 December 2018. Based on the probability of outflows, no liability for surcharges claimed has been recognised.

8. FINANCIAL RISK MANAGEMENT FRAMEWORK

Commodity price sensitivity

The Group's profitability and cash flows are primarily affected by changes in the market price of gold which is sold in US Dollar and then converted to Rand.

Gold is sold at spot prices. Forward sales of gold production, as well as derivatives or other hedging arrangements to establish a price in advance for the sale of future gold production are not entered into at 30 June 2018.

9. FAIR VALUES

The Group's assets that are measured at fair value at reporting date consist of available for sale financial instruments and are included in Investments in other entities on the statement of financial position. Of this line item, R9.2 million (30 June 2017: R8.6 million) relate to fair value hierarchy Level 1 instruments and R0.2 million (30 June 2017: R0.2 million) relate to fair value hierarchy Level 3 instruments.

10. SUBSEQUENT EVENTS

On 31 July 2018, the acquisition of the West Rand Tailings Retreatment Project Assets became unconditional. 265 million shares were issued to Sibanye-Stillwater as settlement of the purchase consideration. A Revolving Credit Facility amounting to R300 million was subsequently secured with ABSA Bank Limited (acting through its Corporate and Investment Banking division), replacing the overdraft facility amounting to R100 million that was in place previously.

The Board has approved Rand gold price protection to manage the short-term liquidity risk that will arise from the anticipated increase in borrowings to fund the development of Phase 1 of FWGR.

11. REVIEW REPORT OF THE INDEPENDENT AUDITOR

These condensed consolidated financial statements for the year ended 30 June 2018 have been reviewed by KPMG Inc, who expressed an unmodified review conclusion. The auditor's review report does not necessarily report on all of the information contained in these condensed consolidated provisional results. Shareholders are therefore advised that in order to obtain a full understanding of the nature of the auditor's review engagement they should obtain a copy of the auditor's review report together with the accompanying financial information from the issuer's registered office.

12. OPERATING SEGMENTS

The following summary describes the operations in the Group's reportable operating segment:

- Ergo is a surface retreatment operation and treats old slime and sand dumps to the south of Johannesburg's central business district as well as the East and Central Rand goldfields. The operation comprises three plants. The Ergo and Knights plants continue to operate as metallurgical plants. The City Deep plant continues to operate as a pump/milling station feeding the metallurgical plants. The Crown plant operated as a pump/milling station feeding the metallurgical plants until March 2017 when it ceased all operations.

Corporate office and other reconciling items are taken into consideration in the strategic decision-making process of the chief operating decision maker and are therefore included in the disclosure here, even though they do not earn revenue. They do not represent a separate segment.

MINERAL RESOURCES AND MINERAL RESERVES

DRDGOLD's Mineral Resources from surface decreased by 38% from 11.8Moz (1 565.0Mt @ 0.23g/t Au) in FY2017 to 7.3Moz (873.1Mt @ 0.26g/t Au) in FY2018 mainly due to the exclusion of the Brakpan/Withok tailings deposition facility from Inferred Mineral Resources. The Brakpan/Withok tailings deposition facility is the current deposition site for retreated tailings and will remain so for the life of the Ergo operation. A decision was taken to exclude the Brakpan/Withok tailings deposition facility from the active drilling programme as reprocessing of this material is unlikely in the foreseeable future.

Mineral Reserves increased by 10% from 3.0Moz (299.2Mt @ 0.31g/t Au) in FY2017 to 3.3Moz (332.2Mt @ 0.31g/t Au) in FY2018 due to additional drilling performed on the Rooikraal tailings deposition facility.

The technical information referred to in this report has been reviewed by Messrs Mpfariseni Mudau (SACNASP) and Gary Viljoen (SACG), both are independent contractors of DRDGOLD. They approved this information in writing before the publication of the report.
