

Endomines' gold production in Pampalo reaches 331.3kg (10,652oz) in 2018

Endomines AB, Stock Exchange Release 18 December 2018 kl. 08:00 CET

Endomines' total gold production in Pampalo, Finland, has reached 331.3kg (10,652oz) in 2018, exceeding the Company's expectations for the year.

As previously reported, gold production in January-October amounted to 318.5kg (10,240oz), accounting for all gold recovered from the ore mined in 2018. Thereafter, 12.8kg (412oz) of gold has been recovered in connection with the cleaning and maintenance of the processing plant, bringing the total gold output to 331.3kg (10,652oz). The Pampalo mine has now been placed under care and maintenance and no further production during the current year is expected.

*"Our personnel in Pampalo have delivered an excellent performance during the current year. Despite the persistently difficult rock conditions in the mine and the preparations for care and maintenance during the summer and autumn, they have succeeded in producing substantially more gold than the 250-300kg that we had initially budgeted for 2018. I am also pleased to note that the production output was achieved while maintaining safety as a top priority", says **Ingmar Haga**, Chairman of Endomines.*
