

Pre-clinical study proving chondrointegration accepted for publication in scientific journal

Episurf Medical (NASDAQ: EPIS B) today announces that a peer-reviewed article showing that chondrointegration of the Episealer® implant improves after hydroxyapatite coating has been accepted for publication in a scientific paper.

The publication with the title "Therapy of osteochondral defects: chondrointegration of metal implants improves after hydroxyapatite coating" by H. Schell et al. at Julius Wolff Institut, Charité University Hospital, Berlin, Germany, will be published in the journal Knee Surgery, Sports Traumatology, Arthroscopy and is shortly available online.

"The article is extremely exciting as the concept "chondrointegration", which is a unique feature of the Episealer® implant, becomes accepted in the field of cartilage surgery. In this comparative sheep study it has been shown that cartilage adheres to the hydroxyapatite which is used for coating of the Episealer® implant. This encourages sealing of the cartilage lesion, resulting in protection of the deeper parts of the joint from aggressive joint fluid, which, in turn, should give better longevity of the implant" says Prof. Leif Ryd, Senior Medical Advisor, Episurf Medical.

"This publication is very welcome for us, as high-quality peer-reviewed evidence is a must for orthopaedic surgeons in their treatment decisions" comments Pål Ryfors, CEO, Episurf Medical.
