

Net Insight receives order for expansion of Digital Terrestrial TV network in southern Europe

26 March, 2008

Stockholm, Sweden – A public broadcaster in southern Europe has placed an add-on order for expansion of its DTT network.

In the beginning of 2007, this customer selected Net Insight's Nimbra platform for a small initial phase of its DTT network rollout. The customer, who is a public broadcasting company in southern Europe, now extends the network with additional transmitter sites and continues to deploy the Nimbra platform.

The new Nimbra equipment will be delivered during the second quarter 2008.

"This order once again shows that our Nimbra platform both proves to be an efficient and reliable solution for DTT networks, and also that customers are satisfied with the products that are delivered", says Fredrik Trägårdh, CEO of Net Insight.
