

Net Insight to supply backbone network for cable TV distribution in an African country

29 December 2009

Stockholm, Sweden – Net Insight, a leading provider of efficient optical transport solutions for media, broadcast and IP networks has received an order to deliver the Nimbra platform for a cable TV distribution network in Africa.

A national telecom operator in an African country is deploying a cable TV distribution network. The network shall initially multicast IP TV services between 15 regional sites and carry regionally inserted native video content with 100% Quality of Service.

Net Insight will provide the CATV backbone network where the central headend is implemented using multiple Nimbra 680 high-capacity switches and all local distribution sites are served by Nimbra 360 nodes.

Net Insights Nimbra product family makes up the world's most efficient and scalable media-rich transport solution. Encompassing a full range of multiservice transport equipment, the Nimbra platform enables Broadcast, IP Media, TV Distribution and Broadband TV networks to deliver video and media services from the core backbone to the end customer. Always with the industry's highest bandwidth utilization, and always with 100% Quality of Service.

The Nimbra 680 is a carrier-class network switch that typically forms the high-capacity backbone layer of a Nimbra network, aggregating and switching traffic from Nimbra 360 access nodes which provide a wide selection of multiservice access interfaces making it ideal for use at customer premises or in co-location POPs.
