"POP SAFETY" INJECTION NEEDLE - PROTOTYPE COMPLETED

The Directors of bioMD Limited advise that it has completed the definitive prototype of its "POP Safety" Injection Needle.

The prototype samples will be used to demonstrate the simplicity of its design to potential global overseas partners, healthcare clinicians and infection control personnel.

The "POP Safety" Injection Needle is the second of our prototypes to be completed, and together with the Prefilled Safety Syringe, have been sent for evaluation to a European global syringe and needle manufacturer.

Managing Director, Michael Bennett, said: "The further development and refining of the "POP Safety" Injection Needle by our production team has resulted in a product that addresses the clinical protocols and practices that are currently in use by the healthcare market. This has been achieved both on schedule and within budget."

The "POP Safety" Injection Needle is a single-use safety needle that can be used with all currently available disposable syringes and helps in preventing needlestick injuries to healthcare workers.

For further information, contact the office on (61 8) 9262 6777; Robert Towner 0414 594 868 or Michael Bennett 0419 944 567.

For your information ...

bioMD is a company focused on bringing safety-engineered and cost effective medical devices to market. bioMD facilitates design, tooling and manufacturing of Innovative Biomedical Devices. At successful completion of prototypes, the Company facilitates regulatory applications and forms strategic partnerships and alliances to develop sales and distribution channels.
