

REPORT FOR THE QUARTER ENDED 30 JUNE 2007

INTRODUCTION

Quantum Resources Limited ("Quantum" or "the Company") is an Australian base metal, uranium and gold explorer with a suite of projects whose tenements cover approximately 20,000 square kilometres in the Northern Territory and Western Australia.

BASE METAL, URANIUM AND GOLD EXPLORATION

The Barrow Creek, Tanami, Mt Peake and Ware Range tenement holdings cover approximately 17,000 square kilometres in the Northern Territory and the Gardner Range tenement holdings cover approximately 650 square kilometres in Western Australia. The Barrow Creek, Tanami, Mt Peake and Ware Range projects are prospective for base metals, uranium and gold. In Western Australia, the Gardner Range project, 150 kilometres southeast of Halls Creek, is prospective for iron oxide copper-gold-uranium ("IOCG") deposits.

Mine Management Plans containing proposed programmes of RAB/RC drilling and sampling and Radiation Management Plans have been submitted and approved by the Department of Primary Industries, Fisheries and Mines in the Northern Territory for Barrow Creek, Mt Peake and Ware Range. At Gardner Range, a joint airborne geophysical survey is currently being undertaken in conjunction with Cameco Corporation, the large Canadian mining/exploration company ("Cameco"). Drilling of the Mt Mansbridge prospect in Gardner Range is planned subsequent to heritage approval due in August 2007.

Gardner Range (Quantum 100%)

The Company holds tenements in the Gardner Range, 150 kilometres southeast of Hall's Creek with potential for base metals, uranium and gold. Limited exploration for uranium around the margins of the Gardner Ranges was carried out by BHP Exploration and uranium mineralisation was found to be present. The Company's tenements are prospective for Olympic Dam-style iron oxide gold-copper-uranium ("IOCG") deposits and at Mt Mansbridge previous exploration reported uranium up to 980 parts per million ("ppm").

The tenements are surrounded to the north by Cameco. A joint airborne geophysical survey is being undertaken in conjunction with Cameco. A TEMPEST (EM) survey was completed in July 2007 by Fugro and a Magnetism & Radiometrics survey is currently being undertaken by UTS. This data will greatly assist in our understanding of this region and in the development of targets for drilling and sampling.

Heritage surveys are due for completion in August 2007. Field reconnaissance undertaken this quarter provided valuable information regarding access and identified sites for surface sampling and drilling. A drilling program at Mt Mansbridge will commence following heritage clearance. The drilling will test existing uranium mineralisation anomalies along the unconformity as well as targeting a 60 kilometre long NW-SE significant fault system adjacent to the unconformity.

Ware Range (Quantum 100%)

The Ware Range tenement was granted in December 2006. Previous exploration for base metals, uranium, gold and diamonds included rock chip sampling and limited drilling. Field

reconnaissance undertaken this quarter provided valuable information regarding access and identified sites for surface sampling and drilling.

A Mine Management Plan for this programme has been submitted and approved by the Department of Primary Industries, Fisheries and Mines in the Northern Territory. The proposed exploration activities will include a programme of sampling and drilling to investigate the nature of base metal mineralisation associated with the unconformity between the Killi Killi Beds and the Gardiner Sandstone. The sampling programme will include loam sampling of targets over the defined region and stream sediment sampling of the sparse drainage in the region. The drilling programme will include RAB/RC holes traversing over the defined regions and isolated holes where required.

Barrow Creek Project (Quantum earning 80%)

The Barrow Creek Project covers 5,100 square kilometres of the faulted margin of the Georgina Basin to the southeast of Barrow Creek. The setting is similar to the Ngalia Basin to the west which contains sediment-hosted uranium deposits of good grade. Radiometrics indicate that adjacent Proterozoic granites are anomalous in uranium, and adjacent sediments are also anomalous.

Heritage surveys are completed. A Mine Management Plan for this programme has been submitted and approved by the Department of Primary Industries, Fisheries and Mines in the Northern Territory. A review of Open File Data, regional geology and geophysics has led to proposed exploration activities. These will include a programme of RC drilling or soil sampling traverses over the targets in a NE-SW direction to investigate the nature of the unconformity between the Devonian Dulcie sandstones and the Cambro-Ordovician Tomahawk dolostone- sandstone unit. Individual, photographic and geophysical anomalies shall also be targeted by this programme.

Tanami Project (Quantum earning 80%)

This project area covers 2,400 square kilometres in the Mt Davidson area east of The Granites Gold Mine. Previous exploration was restricted to broadly spaced sampling for gold. Several tenements within this group overlap the boundary between the Proterozoic basement rocks and the younger Lander Trough of the Wiso basin to the north and are prospective for Mississippi Valley Type (MVT) silver-lead-zinc deposits. The trough is also prospective for sediment-hosted uranium deposits similar to those in the Ngalia Basin and calcrete-hosted uranium deposits in younger overlying sediments.

The Company is continuing to actively pursue agreements with native title holders in order to proceed to granting of the tenements.

Mt Peake Project (Quantum earning 80%)

The Mt Peake project area covers 7,700 square kilometres of prospective ground between the Tanami Project to the northwest and Barrow Creek to the southeast. Previous exploration in this area was restricted to widely spaced reconnaissance sampling for gold. Several of these tenements overlie the boundary between the Lander Trough and Proterozoic basement and are highly prospective for sediment-hosted uranium and silver-lead-zinc. The tenements also overlie extensive calcrete deposits which are known to be suitable hosts to uranium elsewhere.

A Mine Management Plan for this programme has been submitted and approved by the Department of Primary Industries, Fisheries and Mines in the Northern Territory. A review of Open File Data, regional geology and geophysics has led to proposed exploration activities which will include a programme of RC drilling or soil sampling to investigate the nature of the unconformity and of anomalies in the licences. These will include a programme of

RAB/RC drilling or soil sampling traverses. Individual, photographic and geophysical anomalies shall also be targeted by this programme.

GOLD EXPLORATION

In Western Australia, the Whiteheads and Jackson projects are the focus of gold exploration and the Company's tenement holdings cover approximately 3,000 square kilometres.

Whiteheads Project (Quantum earning 80%)

The Whiteheads Project is located 60 kilometres northeast of Kalgoorlie within the metamorphosed rocks of the Gindalbie Greenstone Belt. The area hosts mafic and felsic volcanics, sediments, and altered intrusive porphyries. The project areas surround the historic Gindalbie Mining Centre to the east which has produced 45,240 ounces of gold at an average grade of 27 g/t gold. The Lindsays Project immediately to the west has now been found to contain a resource of nearly 2 million ounces at approximately 2.4g/t gold.

Numerous significant RAB anomalies on the company's ground identified from previous drilling will be targeted in the second half of 2007 with follow-up RAB/Aircore drilling.

Jackson Project (Quantum 100%)

The project area covers 756 square kilometres of the Barlee-Marda Greenstone Belt which is located 100 kilometres north of Southern Cross. There is a history of small scale underground gold production in the region.

Assessment of open file reports has been completed with the outcome indicating that there are areas of potential for gold under the cover of recent sediments along the margins of the belts. Previous sampling was ineffective as transported material was collected. Wide spaced RAB drilling would be the preferred method of testing these trends. Laterite sampling is planned, pending completion of a heritage survey.

Other Projects (Quantum 100%)

In the Mellrose, Wiluna, Bullfinch and Big Bell areas magnetic data has been assembled and processed and Aster satellite data has been acquired. This data will be analysed and targets for exploration will be identified.

Farm-Out Joint Ventures

Wanganoo Joint Venture (Quantum 20%)

The Company's Dingo Range prospect at Wanganoo is the subject of the Wanganoo joint venture, with Cullen Exploration Pty Ltd acting as managers, earning an 80% interest.

Exploration to date within E53/988 has uncovered a number of untested geochemical and magnetic anomalies which are targets for gold and nickel sulphide mineralisation. These anomalies lie on contacts or within favourable komatiitic host rocks with interpreted strike extents of at least 4 kilometres.

A ground EM (electro magnetic) survey completed earlier identified two conductive targets within prospective ultramafic units. The survey targeted a 4 kilometre long trend of ultramafics within E53/988, where strong nickel (to 6405ppm) and copper (to 3525ppm) anomalies from previous RAB traverses occur on contact komatiite positions. Cullen attempted to drill these targets during the December 2006 quarter, however the drill rig was unable to reach the targets due to drilling conditions.

The Company's joint venture partner has advised there was no field work during the quarter.

Officer Hill Joint Venture

Newmont Australia have joint ventured into EL23150 which is located 34 kilometres southwest of The Callie gold mine, also owned by Newmont. Previous explorers located sporadic mineralization from drilling such 4 metres @ 4.64g/t, numerous short intervals of 1-4g/t, and several wide intercepts of 0.1-1g/t. The prospect is considered to have excellent potential to host steeply plunging shoots such as those at the Tanami Gold Mine. An apparent fold closure to the east offers the possibility of discovery of Callie-style mineralization at depth. The Company is waiting on a report from its joint venture partner on activities during the quarter.

The technical information in this report has been reviewed and approved by Dr D S Tyrwhitt who is a member of the Australasian Institute of Mining and Metallurgy and has approximately 40 years experience in the industry. Attached is a copy of the Company's Mining Exploration Entity Quarterly Report in accordance with Listing Rule 5.3.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 Appendix 5B has been prepared in accordance with Australian Equivalents of International Financial Reporting Standards (AIFRS).
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.

(referred to in this Statement as the "Current Quarter")

ADDITIONAL INFORMATION

Item 1.23 Payments to Other Entities

Some of the Directors of the Company are also Directors of AXIS Consultants Pty. Ltd. ("AXIS"). The Company does not consider AXIS to be a related party.

Item 7.7 Options

Listed

43,748,673 Options maturing 31 October 2010 at an exercise price of \$0.10 per Option. The Options are exercisable any time after 1 January 2002. Each option will convert to one fully paid ordinary share.

32,875,597 Options maturing 30 April 2012 at an exercise price of \$0.10 per Option. The options are exercisable any time after 1 January 2003. Each option will convert to one fully paid ordinary share.

68,378,151 Options maturing 30 November 2012 at an exercise price of \$0.05 per option. The options are exercisable any time after 1 July 2003. Each Option will convert to one fully paid share.

Unlisted

1,400,000 options maturing 24 March 2010, issued under the 1999 Employee Share Option Plan, have an exercise price of \$0.08 per option. Upon exercise, each option will convert to one fully paid ordinary share. These options cannot be exercised until after 24 March 2003 and only at that time if the Company's share price on the ASX has increased by a factor of 20% over the price of the shares at the time the options were issued.

8,600,000 options maturing 19 October 2011, issued under the 2005 Employee Share Option Plan, have an exercise price of \$0.07 per option. Upon exercise, each option will convert to one fully paid ordinary share. These options cannot be exercised until after 19 October 2008 other than in the case of a change of control.
