For Immediate Release

Cambi wins a new thermal hydrolysis contract in Norway

Asker, Norway, 30 May 2022

Cambi has been awarded a contract by Nedre Romerike Avløpsselskap (NRA) to deliver a state-of-the-art thermal hydrolysis plant at the Krogstad Miljøpark in the municipality of Lillestrøm, Oslo metropolitan area.

The estimated contract value is more than NOK 80 million. "It is a pleasure for Cambi to deliver a new thermal hydrolysis plant close to home. This milestone project uses our latest design for higher energy efficiency and maximum value creation. We look forward to working with NRA towards realising one of Norway's most modern sludge treatment centres", said Eirik Fadnes, Cambi CEO.

By building a new sludge treatment centre with thermal hydrolysis before anaerobic digestion, NRA aims to reduce its carbon footprint and improve operational synergies. The biogas will be used for hydrogen production.

Thomas Trømborg, CEO of Nedre Romerike Avløpsselskap, remarked: "Thermal hydrolysis is an essential part of the new sludge treatment centre, maximising biogas production and producing a high-quality biosolids product. The biogas value chain is an essential part of the circular economy, reducing waste problems and improving the society's use of resources. The project creates local value and green jobs. NRA looks forward to collaborating with Cambi at Krogstad".

NRA is an inter-municipal company of Lillestrøm, Lørenskog, Rælingen and Nittedal, providing wastewater treatment services to 170,000 people. NRA is building a modern sludge treatment centre to serve up to 370,000 people from the rapidly growing regions of Nedre Romerike and Glåmdal, north of Oslo.

Cambi's project consists of the thermal hydrolysis plant, boiler, heat exchanger, and integration services. The sludge treatment centre is expected to start operations in 2025.

Following standard public procurement procedures, the contract is expected to be signed after a notice period expiring on 9 June (Norwegian 'karenstid').

About Cambi:

Cambi is a global technology and solutions supplier for sustainable biosolids management at wastewater treatment plants and other anaerobic digestion facilities. Since 1992, Cambi has built a portfolio of proven and patented technologies, developed strong marketing, sales, and support capabilities, and can reference a broad portfolio of well-performing plants delivered in 25 countries on six continents. The thermal hydrolysis process increases biogas output, reduces greenhouse gas emissions, and destroys pathogens and other harmful substances, enabling the production of excellent quality organic fertilisers and various soil products. Cambi is listed on Euronext Growth Oslo, a multilateral trading facility part of Euronext, the largest stock exchange platform in Europe. Find out more at cambi.com.
