

Annual report 2023

DNB Group

About this report

In this integrated annual report for 2023, we show how we work to create value in the short and long term for our employees, shareholders and society as a whole. We use the framework from the International Integrated Reporting Council (IIRC) and meet the requirements of the sustainability reporting standard prepared by the Global Reporting Initiative (GRI). The sustainability data has been verified by a statutory auditor. In this report, we use 'DNB' to refer to DNB Bank ASA and its subsidiaries, unless otherwise stated.

There is an overview of all of our sustainability reporting for 2023 on dnb.no/sustainability-reports. This includes the GRI index and other sustainability indices, the reports relating to the Norwegian Transparency Act and the activity duty and the duty to issue a statement, as well as other useful documents and reports.

The annual report is available in English and Norwegian and can be downloaded as PDF files from our investor web pages, ir.dnb.no. This is also where our reporting under the EU taxonomy can be found (in Excel format), while there is a summary of this on page 85 of this annual report. The annual report in machine-readable format in accordance with ESEF (European Single Electronic Format) is also available on ir.dnb.no, together with the Pillar 3 report for 2023, which contains more information about risk and capital management.

Cautionary statement and estimation uncertainty

This report contains statements regarding the future prospects of DNB, including estimates, strategies and objectives. The risks and uncertainties inherent in all forward-looking statements can lead to actual developments and profits differing materially from what has been expressed or implied.

Improvement of sustainability data

Sustainability and associated reporting is a complex and dynamic topic that is constantly evolving. We see an increase in knowledge and maturity in this area, as well

as improvements in data, which mean that we will see adjustments to targets and reported figures to a greater extent here than in other areas. This can be due to changes in definitions, methods and standards for measuring and reporting sustainability data.

Corrections to figures reported previously for financed emissions

We are continuously improving the source data for and the calculations of our financed emissions. This means that there may be changes to figures reported previously and that we may update our targets. Figures that deviate considerably from figures reported previously will be updated, and any updated goals and targets will be described.

The emissions reduction target (Scope 1 and 2) for the oil and gas portfolio was replaced by a new target as a result of the work with DNB's transition plan. We have set a target to reduce the absolute, committed lending volumes for the oil and gas portfolio (upstream) by 18 per cent by 2030, based on the baseline year of 2019.

Read more on page 66.

In commercial property, as a result of the work with the transition plan, we changed the method for calculating the emissions factor, from a three-year rolling average to use of the actual emission factor per year. The target to reduce the emissions intensity for this portfolio was also updated. The previous target, which consisted of a reduction of 25 to 35 per cent by 2030, was replaced by a target of a 29 per cent reduction by 2030, compared with the baseline year of 2019. This explains why the financed emissions for the year differ from those in 2022.

² The Board of Directors proposes a dividend of NOK 16 per share for 2023.

Chair of the Board's statement

A solid bank that delivers long-term value creation

Chair of the Board
Olaug Svarva

We are leaving behind a year marked by geopolitical unrest, which in combination with inflation and rising interest rates, contributed to uncertainty relating to developments in the global economy. To cool down the high inflation here in Norway, the Norwegian central bank, Norges Bank, raised the key policy rate many times over a short period of time. And although the Norwegian

personal customers has been falling throughout the year. DNB's reputation and customer satisfaction will be high on the agenda of the Board also in the time ahead.

Norwegian banks are robust, with a well-functioning financial system, and a recent stress test performed by the European Banking Authority (EBA)

It is, and has been, important for the Board of Directors that DNB is able to be there for companies and individuals alike in a time of greater uncertainty.

economy has managed fairly well so far in a global context, higher costs have affected the everyday lives of companies, as well as individuals.

It is, and has been, important for the Board of Directors that DNB is able to be there for companies and individuals alike in a time of greater uncertainty.

During the year, the Group increased its services and presence for both these groups. Needs have been more wide-ranging than before, but the purpose of the advisory services remains the same – to give advice and find solutions that are adapted to the individual, whether this is a large company or an individual personal customer. At the same time, 14 interest rate hikes over a short period of time has been challenging for many customers, and satisfaction among

showed that DNB is one of the most financially sound banks in Europe. Financial strength is the Group's first line of defence in the face of uncertain times, and enables the bank to withstand losses, while at the same time being able to continue to finance everything from homes to start-up companies, and support companies and individuals throughout the country.

It is also important to the Board that the Group delivers on its long-term dividend policy. Delivering stable dividends engenders trust in the financial markets and more favourable access to capital, which in turn benefits customers. This creates increased scope of action to deliver innovative and competitive products and services. Half of DNB's dividends also benefit society, in the form of dividends paid to the Norwegian

government, the DNB Savings Bank Foundation and Folketrygdfondet (manager of the Government Pension Fund Norway).

The climate crisis is one of our time's largest challenges, and Norway and the world are facing a major transition in the time to come. This will require a historic reallocation of capital to renewable energy sources. It is important to the Board that DNB uses its position to promote positive developments for its surroundings, and the work to be a driving force for sustainable transition is an example of this. With its competence and capital, the Group aims to contribute to the Norwegian business sector succeeding in making the transition to a low-emission society, and to companies developing new solutions.

This is an area experiencing great development, and DNB is well on its way to achieving its goal of financing and facilitating sustainable activities worth NOK 1 500 billion by 2030. At the same time, last year marked an important milestone for the Group, with the launch of DNB's transition plan, which describes how the Group will achieve net-zero emissions of greenhouse gases by 2050. The Board was closely involved in this work during the year.

The climate crisis cannot be solved by any individual country or company on its own, and there are many factors that are beyond the control of the business sector. DNB has therefore chosen a dynamic plan, that can rapidly be adapted to change, and can meet developments in demands from the surrounding world. The Group is completely dependent on collaborating with the authorities, the business community and the wider society in order to succeed.

Another area in which DNB plays a key role is in the work to combat financial crime, which continues with

undiminished force. A good compliance culture in this area is vital to all businesses in the finance sector, and it was positive to see progress in several areas in DNB in 2023. This is a task that the Board and the administration have considered a top priority for many years. At the same time, this is work that does not have a clear finish line. Developments in the threat

With its competence and capital, the Group aims to contribute to the Norwegian business sector succeeding at the transition to a low-emission society, and to companies developing new solutions.

landscape around us, combined with an increasingly digitalised society, mean that fraud methods are becoming ever more sophisticated, and new methods are appearing. In recent years, DNB has therefore built a strong specialist environment in areas including cyber security, which is helping to prevent fraud attempts against the customers and the bank every day.

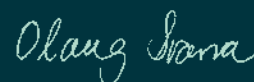

Advances made in artificial intelligence during the past year are another example of how new technology brings about new expectations from customers and affects how the business sector works to develop new services. It is important to the Board that DNB is an effective bank that promotes innovation and product development for customers. It is not always a matter of being first, but rather of looking ahead and providing a good foundation for solutions that stand the test of time.

Being at the forefront of technological and societal developments requires a continuous supply of varied competence. The aim is that as many people as possible should want to work – and continue working – in DNB.

In a time of rapid change, people continue to be the Group's most important resource. The Board places great emphasis on an organisational culture that contributes to a highly diverse range of experience, competence and perspectives. This is necessary in order to reflect the modern society the bank is part of, and the customers it exists for.

Even though the pace of change is increasing, and the Group keeps gaining new tasks, the most important task remains the same – delivering profitable and stable development to customers and shareholders. This way, DNB will have access to capital, and be able to contribute to the climate transition, prevent financial crime, be an attractive workplace and develop innovative solutions.

On behalf of the Group, the Board would like to express its gratitude for the trust DNB has been shown during the year. DNB will continue to be there for people and businesses in both turbulent and stable times.

Chair of the Board of Directors
Olaug Svarva

CEO's statement

A robust bank in unsettled times

CEO
Kjerstin R. Braathen

2023 was another year in which we really noticed that many things we have taken for granted are changing, such as low inflation, a stable climate and peace in our part of the world. This was also the year in which everyone became truly aware of artificial intelligence, and we were shown what challenges and opportunities are offered by new technology. These changes affect us, and they affect our customers.

In DNB, we can look back on a year of high activity throughout the Group and a record number of customer conversations. In the face of higher interest rates and high inflation,

for sustainable transition, invest in the fight against financial crime, develop new and improved services for our customers and deliver profits for our owners.

Towards net zero together with our customers

2023 was the warmest year on record, and the climate crisis is clearly noticeable in our part of the world as well. Although the transition demands a great deal of us all, it also creates great opportunities for Norway and the Norwegian business sector. We in DNB will help realise those opportunities. In 2023, we took our work in this area one

Every day, we work to ensure that customers choose us. We want them to do so because DNB offers the best banking experience for precisely them.

households and the business sector in Norway continue to prove robust. As this annual report goes to print, unemployment is still low and interest rates appear to be stabilising. Despite the fact that uncertainty remains greater than normal, we believe in a soft landing for the Norwegian economy.

Throughout 2023, DNB has continued to deliver strong results. Results that allow us to, among other things, keep on helping people and businesses through more unsettled times, be a driving force

step further in our role as a driving force for sustainable transition. We launched our transition plan, which shows our path to net-zero emissions in 2050. In the time ahead, we will reduce the emissions we finance, and do so together with our customers and in close collaboration with the authorities and the rest of the business sector.

During the year, I met customers throughout the country, and I am impressed by the small and large businesses that are working hard to

develop solutions the world needs, ranging from maritime businesses along the coast to large industrial companies that are focusing their efforts outside Norway's borders. Going into 2024, we will continue to finance good initiatives. DNB functions as the bridge to the international capital market, which we know is particularly important for Norwegian companies.

Safe and stable bank services are a prerequisite for trust

It has been a long time since there was a robbery in one of our branch offices. This does not mean that criminal activity is on the wane. On the contrary. In the past few years, there has been a sharp increase in the number of fraud attempts against our customers. In 2023 alone, we stopped fraud attempts against our customers to the value of NOK 1.5 billion. The world is becoming increasingly interwoven through trade and digital infrastructure, which has been extremely valuable and has given us enormous benefits over the years, but has also made us more vulnerable. The fight against financial crime concerns society as a whole, and safe and secure services are among DNB's most important deliveries to our customers. This is why we are making substantial investments in competence and in the development of new systems across the Group's security areas. We have also decided to share our threat assessments with the world around us, because transparency and cooperation are among our most important tools in the fight against criminals.

A well-functioning bank market means better services for our customers

With over 100 Norwegian banks, the competition for customers is tough. At

The fight against financial crime concerns society as a whole, and safe and secure services are among DNB's most important deliveries to our customers. This is why we are making substantial investments in competence and in the development of new systems.

the same time, Norwegian banks are among the most cost-efficient in Europe. This benefits the customers, in the form of favourable prices and more resources for the development of digital services. In addition, Norway's infrastructure makes it easy for customers to choose the bank that suits them best.

Every day, we work to ensure that customers choose us. We want them to do so because DNB offers the best banking experience for precisely them. Not because it is difficult to switch banks. This is why we invest a great deal in the development of our digital services and of a range of products and services that our customers want. I am particularly glad that in 2023, we yet again had one of the most used and liked financial apps in Norway.

Every fourth person in Norway uses our mobile banking app, and during the year we saw an increase in use of the integrated Pengebruk (spending) feature, which helps our personal customers keep track of their personal finances. At the end of the year, we also achieved a milestone, with over 100 000 users of DNB Bedrift, our app for Norwegian corporate customers.

The work to simplify and improve our services is never-ending, and will continue at full speed in 2024.

A bank that is ready for the future

The climate transition, combatting financial crime, increased digitalisation and a new financial day-to-day reality. None of this would have been possible without the people in DNB, and the more room we give technology, the more important our people will be. I am impressed by the efforts of the 10 964 DNBers who delivered value to society, our customers and our owners throughout an eventful 2023, and who continue to do so every day.

Kjerstin R. Braathen
CEO

DNB in society

As at 31 December 2023

Our resources

- Our 10 964 employees are our most important resource.
- We are close to our customers with our local presence throughout Norway, and we are represented in 17 countries.
- DNB is Norway's largest financial services group with 237 000 corporate customers and 2 million personal customers, who are offered a complete range of financial services through the mobile banking app, online bank, customer service centres, branch offices and international branch offices.
- Our financial strength – as shown by a common equity Tier 1 (CET1) capital ratio of 18.2 per cent – makes us robust and gives us the ability to withstand losses, while at the same time continuing to support companies and individuals during unsettled times.

Curious
Bold
Responsible

We create value for customers

- We are available for our personal customers, and in 2023, we had over 3.4 million customer conversations by phone and chat.
- Our corporate customers benefit from our extensive product portfolio and sound industry expertise.
- DNB Asset Management is one of Norway's largest asset managers, and in 2023, it managed equities funds and shares worth NOK 945 billion for the customers.
- The Spare app is one of the most popular savings apps in Norway, and by the end of 2023, more than NOK 7.2 billion was invested in mutual funds via the app.
- DNB Markets participated in arranging bond and commercial paper issues worth NOK 1 301 billion to customers in 2023. Of these, sustainable bond issues accounted for NOK 47 billion.
- DNB Livsforsikring had around 1.4 million personal customers with individual and group agreements, and approximately 33 000 agreements with companies.
- During the year, 18 099 residential properties were sold through DNB Eiendom, which corresponds to an average market share of 15.6 per cent.

The customer chooses us, we deliver sustainable value creation, and we find the solutions together.

We create value for society

- DNB plays an important role in the financial system, and every six days, assets worth as much as the Norwegian oil fund pass through our systems.
- The financial industry plays an important role in the prevention of financial crime, and DNB stopped digital fraud attempts worth NOK 1.5 billion in 2023.
- DNB contributes to the sustainable transition and has so far channelled NOK 562 billion to the financing and facilitation of sustainable activities.
- In DNB, we are committed to promoting entrepreneurs, growth companies and innovative business environments, and we organise events such as DNB NXT, a meeting place where ideas meet capital.
- DNB is one of Europe's mostly highly-rated banks, with an AA- rating from S&P Global and Aa2 from Moody's. A good credit rating can reduce borrowing costs and thus help DNB to offer competitive prices to its customers, while at the same time offering security to companies and those who deposit funds with us.
- Every year, the tax and dividends that we pay benefit Norwegian society. In 2023, we paid NOK 13.1 billion in tax and NOK 24.2 billion in dividends. About half of the dividends are paid to the Norwegian government, Folketrygdfondet (manager of the Government Pension Fund Norway) and the DNB Savings Bank Foundation.
- The DNB Savings Bank Foundation owns 8.6 per cent of DNB, and the share dividends finance the foundation's efforts to benefit society. The foundation supports activities relating to culture, sports, nature, outdoor life and cultural heritage, as well as activities in local communities, with a particular focus on activities/primarily aimed at children and adolescents. Since its establishment in 2002, the foundation has contributed NOK 11.5 billion to good causes.

We are a driving force for sustainable transition, and we actively help customers take a more sustainable direction.

Highlights of the year

Q1

DNB is named 'Best Fund House – Overall' in the Morningstar Fund Awards 2023.

DNB enters into partnership with technology company Casi to offer a complete car subscription solution to car manufacturers and dealers.

DNB offers a new green fund, DNB Green Shift Norway.

DNB offers leasing of solar panels for commercial property.

Q2

The merger with Sbanken is completed.

Sbanken

DNB is ranked the country's most attractive employer in the field of business in the Universum survey among students.

DNB is the main partner for Oslo Pride 2023.

Q3

DNB organises NXT for the eighth year running, with over 1 300 people attending the main event in person.

For the sixth year running, DNB Markets Equities retains its second place in Institutional Investor's annual ranking for the Nordic region.

DNB becomes the largest issuer of green bonds in the Nordic region and the second largest in Europe, with NOK 106 billion issued at the end of the quarter.

Q4

DNB publishes its transition plan, which describes how net-zero greenhouse gas emissions will be achieved by 2050 for loans, investments and own operations.

DNB is ranked the country's most attractive employer in the field of business in the Universum survey among professionals.

Fremtind Forsikring (in which DNB has a 35 per cent ownership interest) and Eika Forsikring enter into a letter of intent to merge the two companies.

DNB enters into a cooperation agreement with ZERO. The goal is to combine ZERO's expertise on the environment with DNB's financial and industry-related competence to explore possible solutions in the energy transition.

DNB becomes Norway's leading transaction bank for payments.

Strategy

The customer chooses us, we deliver sustainable value creation, and we find the solutions together. This makes DNB a place where we provide good growth conditions for our customers, society, and our employees.

In 2023, the global and the Norwegian economy were marked by high inflation, increased geopolitical unrest and lower economic activity. It was also a year in which higher prices increased the pressure on both companies and households. At the same time, the past year has confirmed the impression that the Norwegian economy is robust, with companies and households that are adaptable, and have maintained a good level of activity, despite these changes.

As Norway's largest financial institution, DNB mirrors the Norwegian economy, and the Group is affected by developments in the economy. At the same time, digital and technological advances create new expectations among customers, who in turn place higher demands on us, as well as on the products and services we deliver. DNB's strategy builds on our ability to understand and adapt to our surroundings, based on our strengths and competitive advantages..

Our position and our competitive advantages

The full range of products

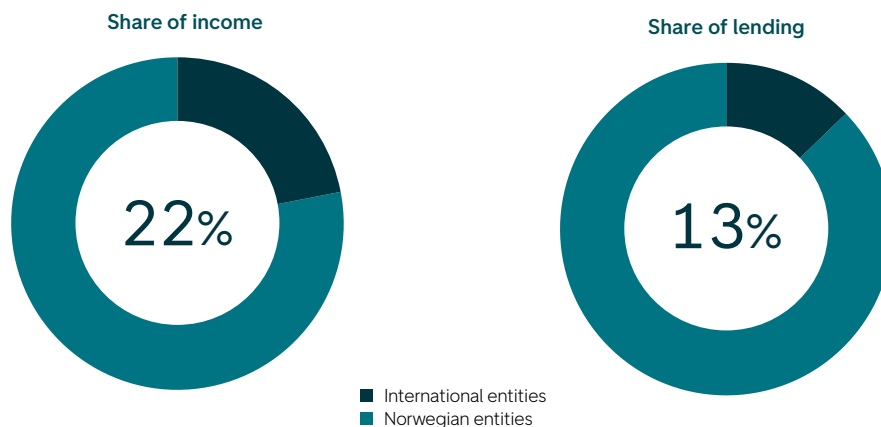

Among DNB's greatest strengths is the breadth of products and services we offer, and where we offer them. At present, DNB's customers range from private individuals in different phases of life and start-up and growth companies, to large international corporations

and agencies in the public sector. At DNB, customers will receive advice and products that are adapted to their needs. We offer the full range of financial products and services through different customer channels: the online bank, mobile solutions, customer service centres and branch offices. Being where the customers are when they need it is a prerequisite for being able to deliver on our ambitions over time.

Broad product portfolio offered to all customers, and extensive cooperation across customer units

DNB's international entities

Main emphasis on Norway, but international presence in selected industries

Our strategy is primarily based on organic growth, and on achieving growth in areas in which we have a competitive advantage. Most of our business operations are in Norway. However, we also have a prominent position in the Nordic region and a strong international presence in strategically selected industries and sectors in which DNB has a long history in terms of position, experience and competence:

- Energy
- Seafood
- Shipping
- Healthcare
- Technology and telecom

Norway will continue to be our primary market in the time ahead, but our global presence means that we can continue to help our customers reach an international market.

The advantage of scale

Profitable operations and good customer experiences go hand in hand. DNB is run efficiently and has a low cost/income ratio, compared with other similar banks. The work with digitalisation, automation and modernisation will remain important going forward. We must be curious and explore the opportunities offered by new technology – always with the goal of developing innovative and effective solutions for our customers.

Secure and stable operations for the future

DNB is a solid bank. This is reflected in both good results in the European Banking Authority's (EBA's) annual stress test and in our having one of the best credit ratings among banks, both in the Nordic region and globally. A good credit rating is important for investors, customers and suppliers alike, and helps secure good access to capital at competitive terms. DNB also has a strong capital position and has delivered good results and higher dividends over time. Our dividend policy is a dividend payout ratio of over 50 per cent, with an ambition to increase the nominal dividends per share per year.

Sustainability

As Norway's largest financial services group, DNB has a significant influence on the sustainable transition. We have an overall goal of achieving net-zero emissions from our financing and investment activities by 2050. DNB's transition plan includes sub-targets for reducing financed emissions leading up to 2030. DNB will also be a driving force for sustainable transition by financing and facilitating sustainable activities. We will work to ensure that the capital that we manage is steered towards more sustainable alternatives, and in 2021, we set a goal of contributing NOK 1 500 billion to financing sustainable activities in the period leading up to 2030. We are also working to continue and further develop DNB's strong position in the area of diversity and inclusion, and to emphasise the importance of the efforts to combat financial crime and contribute to a secure digital economy.

The battle for talent

The people who work in DNB are our most important competitive advantage and a deciding factor in our success. DNB ranks highly in surveys about Norway's most attractive employers among graduates and established business professionals, legal professionals and technologists. The Group is characterised by competent employees with a strong commitment to their jobs. Our employees' curiosity, knowledge and competence are among our main advantages – it is DNB's employees who create value by applying their knowledge and competence.

By succeeding at our strategic ambitions, we will reach our financial targets, create profitable growth and make choices that will stand the test of time.

Financial KPIs:

- DNB has a relative cost target stating that costs must be less than 40 per cent of income.
- In addition to income growth, we have identified the following areas for cost reduction in the period 2022–2025 in order to deliver on our cost target
 1. Automation and efficiency: NOK 1 000–1 400 million
 2. Supplier costs: NOK 500–600 million

Other ambitions:

- Annual growth in loan volume of 3–4 per cent over time.
- Annual growth in commission-based income of 4–5 per cent over time.

Dividend policy and capital planning:

- DNB's overall objective is to deliver long-term value creation for its shareholders, partly via positive developments in the share price and partly via a predictable dividend policy.
- Our dividend policy is to pay more than 50 per cent of annual profits in cash dividends. It is also our ambition for the nominal dividend per share to increase every year.
- Our goal is for the surplus capital to be paid to our shareholders over time, through a combination of cash dividends and share buybacks.

Sustainability ambitions:

DNB finances the climate transition and is a driving force for sustainable value creation

Overriding goal: Net-zero emissions by 2050

Financing the climate transition:

- Finance and facilitate sustainable activities worth NOK 1 500 billion by 2030
- Increase total assets in mutual funds with a sustainability profile to NOK 200 billion by 2025
- In 2025, 50 per cent of net flows of total assets will go to mutual funds with a sustainability profile

Decarbonising our lending and investment portfolios:

- Sub-targets for 2030 for different segments of the loan portfolio
- Sub-targets for 2030 for the investment portfolios (in DNB Livsforsikring, DNB Asset Management and DNB Næringseiendom)

Decarbonisation of own operations:

- Sub-targets for 2030 for motor vehicles and commercial real estate

**DNB is a driving force for diversity and inclusion
DNB combats financial crime and contributes to a secure digital economy**

¹ Current expectation from the supervisory authorities.

Strategic ambitions

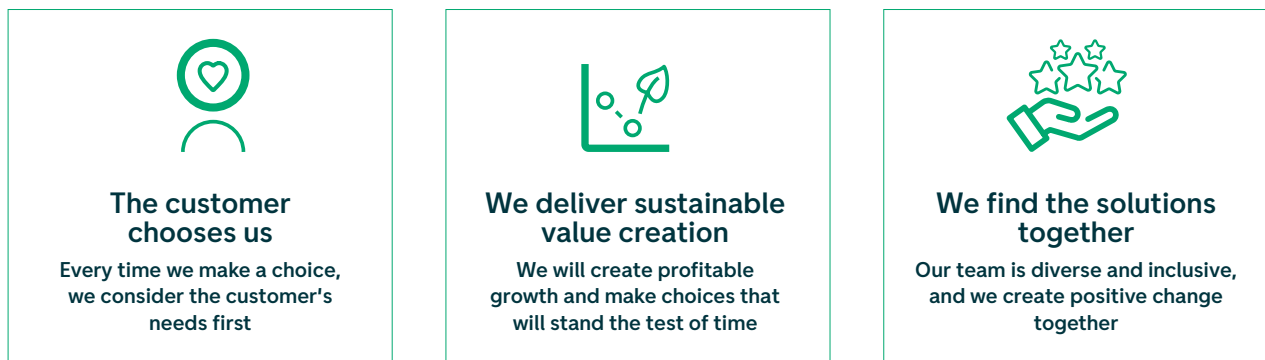

Achieving profitable operations and good financial results is at the heart of everything we do and is necessary to position DNB for the future. This enables us to drive innovation for the benefit of our customers, to be a driving force for the sustainable transition and to continue to be an attractive employer. We achieve this by focusing on satisfied customers, sustainable income, a reasonable cost level, effective use of capital, and an adaptable and effective organisation. Our work to secure compliance

and to identify and manage risk that can affect our target attainment contributes to this.

DNB's Group strategy applies for the period 2022–2027. The strategy gives direction to the Group and has room for change and innovation, even in turbulent times. The strategy is based on the idea that we have the best chance of success when we draw on our strengths and take advantage of the opportunities available to us.

DNB – Where people and business thrive

Strategic ambitions

Sustainability ambitions

Our values

We contribute actively to positive developments in society, and the choices we make must be in keeping with our values and our competitive advantages. The values curious, bold and responsible serve as our guiding stars.

The customer chooses us

We go that extra mile to ensure that the customers choose us. They should perceive us as proactive and innovative and, at the same time, reliable and attentive to their needs. We explore new business models and give our customers valuable advice and innovative, data-based solutions. The technology we use allows us to get closer to our customers and be more relevant in their everyday lives. DNB is primarily a distributor of its own products and services, which have been developed with the customer in mind. We must constantly work to maintain a high level of trust and a good reputation, and we will inspire and engage the customer in every meeting.

In the Group, we are exploring the use of artificial intelligence (AI), which can give added value to our customers. In this work, it will be critical to take ethics, security, data protection and confidentiality into consideration. One of the areas in which we use AI is in language understanding, where this technology makes it possible to respond to customers' enquiries in their own language. Used properly, this tool can streamline processes and play a material role in promoting increased financial inclusion. Another area in which we use AI is the detection of fraud relating to insurance and pensions. In this area, DNB has saved substantial amounts by using AI technology.

Every time we make a choice, we consider the customer's needs first.

Some of the things we have focused on in 2023:

Payment authorisation using biometrics (facial recognition) is an important innovation that improves the customer experience. So far users of the mobile banking app have used biometrics in 57 per cent of payment transactions, saving them, on average, 11 seconds every time. Annually, this amounts to 25 000 hours – time they otherwise would have spent on other BankID identification when using the app.

The Pengebruk (Spending) function in the mobile banking app has been used by almost 70 per cent of users. The solution helps give customers a better and more comprehensive overview of their finances, so that they can make smarter choices.

On 2 May 2023, Sbanken was merged with DNB, and lives on as a fully digital customer concept in DNB. Sbanken has continued its solid development as part of DNB, and in 2023 it had lending growth of 7.4 per cent.

The accounting system DNB Regnskap integrates banking and accounting services and simplifies financial management for companies. It is one of the fastest growing enterprise resource planning (ERP) platforms in Norway. The system also allows customers to create carbon accounting reports by analysing their accounting data, and this function is a result of our exploration of AI technology.

We deliver sustainable value creation

We will build profitability by drawing on our strengths and making decisions that improve us in the long term. We will do this by growing in areas and positions in which DNB already has a strong presence and competence in selected industries and within the full breadth of customer groups.

We are a driving force for sustainable transition. Through a wide range of advisory products and services relating to sustainable finance, we help our customers move in a sustainable direction. Our transition plan ensures that we work actively to achieve net-zero greenhouse gas emissions in our lending and investment portfolios, in addition to in our own operations. We are gaining greater scope for innovation through the modernisation of processes, secure and effective management of data and more efficient IT systems. This will give us sustainable systems and services, and we will be able to explore new opportunities without compromising on stability, security or existing solutions. Compliance is in our DNA, and we are working actively to identify and manage risk.

We will create profitable growth and make choices that will stand the test of time.

Some of the things we have focused on in 2023:

The market for savings and investment is experiencing strong growth in Norway, especially in pension savings, and is an important growth area for DNB. In 2023, total assets under management in DNB Asset Management exceeded NOK 900 billion for the first time, with growth from both institutional customers and personal customers. DNB has a 38 per cent market share in the personal customer market, and the number of customers and savings schemes is continuing to increase. Our focus is on motivating more women to invest through the #huninvesterer (#girlsinvest) campaign. In order to close the financial gender gap and contribute to financial equality, we offer everything from large-scale customer events to the #huninvesterer academy on dnb.no and tailored advisory services.

DNB is Norway's leading transaction bank for payments. New technology and a new payment platform allow us to handle large volumes and new formats that generate considerably more data for customers, in turn allowing them to automate their own work processes. In addition to a large number of corporate customers in different sectors, the Norwegian public sector is a customer of DNB. This means that every person who receives a salary, benefits or a pension from the Norwegian state and the health service receives payments via a DNB account.

We continue to hold the leading position in the Norwegian sustainable bond market, where we have a market share of 18 per cent.

We find the solutions together

We are dependent on having the right expertise in the right place at all times, and on making sure our employees have room to develop and so that they stay in the Group. We bring out the best in each other and work together as one team to deliver the best products and services to our customers. Our team is diverse and inclusive, and we will attract and develop new expertise. We work continuously on how to make the most of the breadth of the diversity and competence of all our employees.

In recent years, we have had an increased focus on working in a more interdisciplinary manner and finding the best solutions together. Having teams of employees with different competence leads to increased creativity and innovation and facilitates cooperation and knowledge sharing throughout the organisation. This is how we enable faster development of good solutions that better meet the customers' needs.

Our team is diverse and inclusive, and we will attract and develop new expertise.

The Board of Directors of DNB Bank ASA

As at 13 March 2024

The Board of Directors is the Group's supreme governing body. Through the Group Chief Executive Officer, the Board is responsible for ensuring a sound organisation of the business activities. The Board has three sub-committees: the Risk Management Committee, the Audit Committee and the Compensation and Organisation Committee.

Olaug Svarva

Organisation

Operational structure

Our organisation and operational structure should enable us to quickly and effectively adapt to changes in customer behaviour, and to develop products and services that meet customer needs.

Customer areas

Personal Banking (*Personmarked, PM*)

PM serves personal customers and offers two concepts: DNB and Sbanken. With 2 million personal customers, we are the market leader in the Norwegian personal customer market. Customers are offered a wide range of services through a modern distribution network, which includes an online bank, mobile solutions, customer service centres, branch offices and real estate services. Our ambition is that the majority of Norwegian personal customers will use us as their gateway to everyday banking, and we will make the most of our strong digital platform to increase revenues. We will use our position in the housing market to encourage home mortgage customers to choose us to cover more of their needs. Our customer service should be fast, simple, safe and personal.

Corporate Banking (CB)

CB serves DNB's corporate customers and includes the Group's customers in the Norwegian business community and public sector, as well as all international customers and financial institutions. Our ambition is to maintain our leading position in Norway and strengthen our leading position internationally within selected industries for our largest customers, while also strengthening our initiatives in the small and medium-sized corporate customer and start-up sectors. We will further help customers in their green transition. The corporate customer area is characterised by strong customer relations and sound banking and industry expertise. High-quality customer service is assured through our financial strength, a broad international network, competitive services and the ability to adapt quickly to new customer needs.

Product areas

Markets

DNB Markets is Norway's leading investment firm and provides our customers with investment banking services, including risk management, investment and financing products in the capital markets. By working in customer teams and applying good digital solutions, employees provide advice and develop tailor-made solutions for the various customer segments. Markets' risk management activities support the general customer activities through products and prices.

Wealth Management (WM)

WM serves high-net-worth individuals through its Private Banking unit. DNB has a leading position in pensions, and through its subsidiaries DNB Asset Management and DNB Livsforsikring, WM is responsible for the Group's savings, investment and pension products. In addition, the area delivers defined-contribution pension schemes to our customers in close cooperation with the customer areas. WM is also responsible for all mutual fund products in the Group, as well as the further development of the savings, investment and pension products.

Products & Innovation (P&I)

P&I is responsible for the Group's car and object financing operations, as well as leasing operations, in the Nordic countries through DNB Finance. The unit also has responsibility for the Group's products relating to working capital, payments and Open Banking. In addition, P&I is responsible for Group functions associated with the identification of customers, management of customer data, robotics (process automation), design, innovation and strategic partnerships. The unit's ambition is to safeguard and further develop DNB's strong position within financing and payments, while exploring new positions in the areas of data-driven credit, mobility and integrated finance.

Staff and support units

The Group's staff and support units are responsible for operational tasks and Group services and provide a sound infrastructure and cost-efficient services for the business operations.

Segment reporting

The reporting structure has been adapted to the customer segments, and all of the Group's customers are associated with a customer segment. The customer segments are personal customers and corporate customers, and the reporting covers revenues, costs, balance sheet items and capital requirements relating to customer service. The figures for the segments thus reflect the Group's total sales of products and services. The segment reporting is a fundamental element of our financial management. The follow-up of total customer relationships and segment profitability are two important dimensions when setting strategic priorities and deciding on where to allocate the Group's resources.

The segment reporting is presented in more detail in note G2 to the annual accounts.

Legal structure

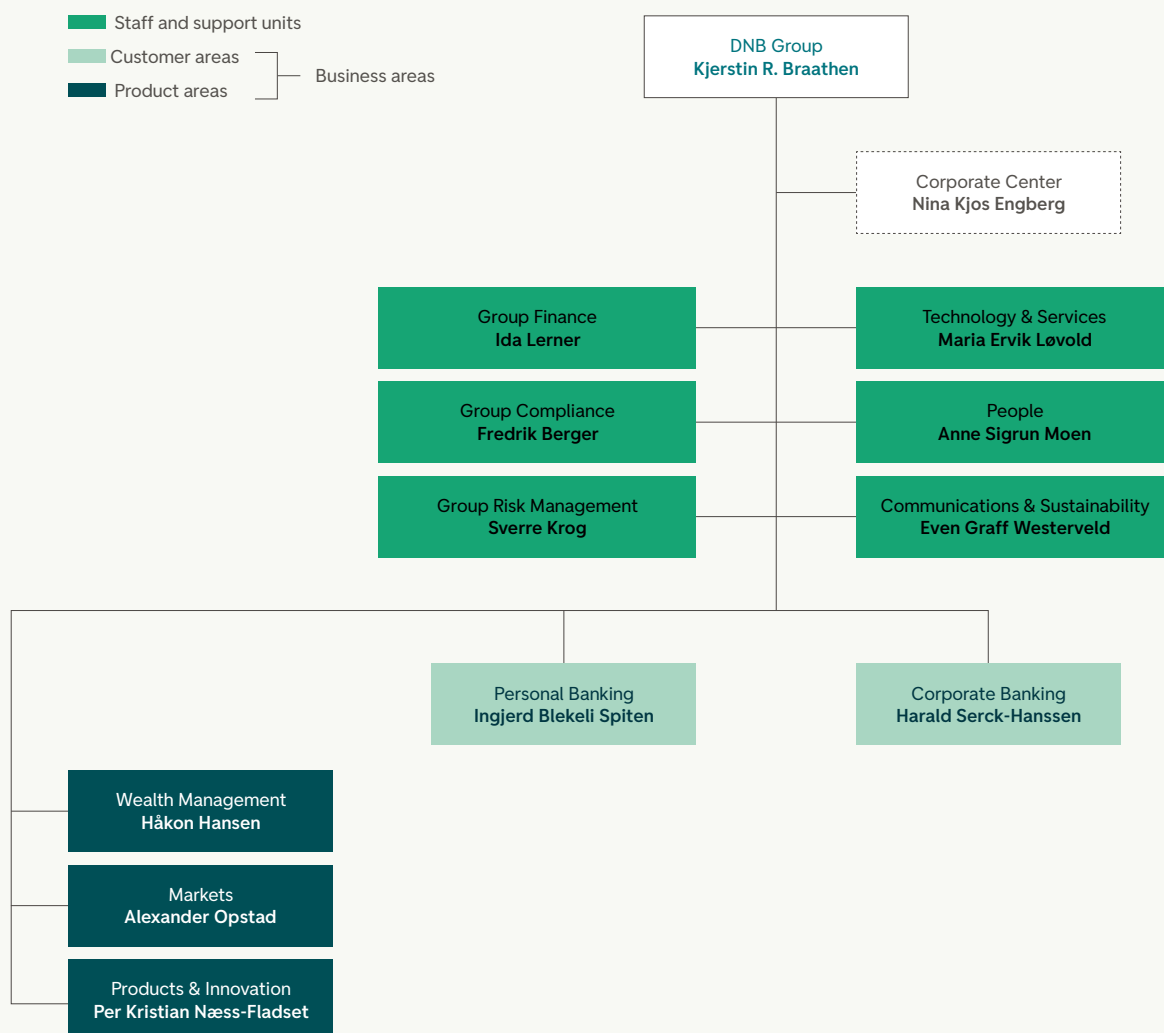

DNB Bank ASA owns several subsidiaries, including DNB Boligkreditt AS, DNB Livsforsikring AS and DNB Asset Management Holding AS, along with their underlying companies. Sbanken ASA was merged into DNB Bank ASA on 2 May 2023, while Sbanken Boligkreditt AS was merged into DNB Boligkreditt AS on 4 September 2023.

Each of the subsidiaries has its own Board of Directors. For an overview of the Group's legal structure, please visit dnb.no/en/about-us/about-the-group.html.

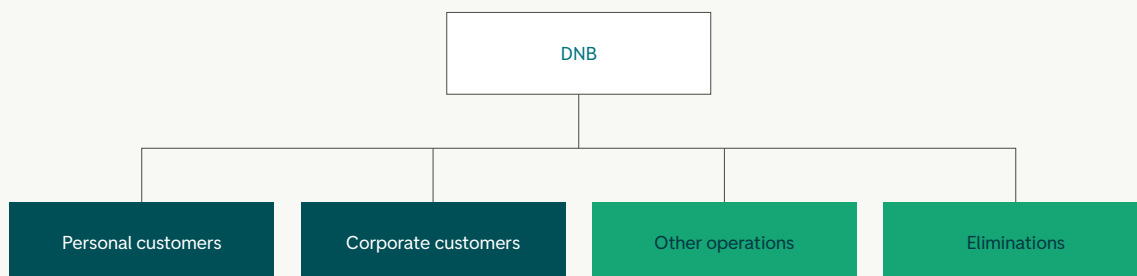

Operational structure

As at 13 March 2024

Segment reporting

As at 31 December 2023

Group Management

As at 13 March 2024

The Group Management team is the Group Chief Executive Officer's collegiate body for management at Group level at DNB. All important decisions are made in consultation with the Group Management team.

Kjerstin R. Braathen

Background: BA (Hons) in Business Studies from the University of Stirling. Advanced Management Programme at INSEAD in Fontainebleau. Experience from Stolt-Nielsen Shipping and Odfjell Group. Joined DNB in 1998 and his roles in the Group have included: Group Executive Vice President of Large Corporates and International and Executive Vice President of and section head in the Shipping, Offshore and Logistics division (SOL).

Key positions of trust: Member of the Board of Digital Norway – Toppindustriseret and member of the council and election committee of DNV.

Number of shares: 56 820¹

Ingjerd Blekeli Spiten

Born 1971 | Woman |
Norwegian

Group Executive Vice President of Personal Banking since 2018.

Background: Master of Science in Business (*Siviløkonom*) from BI Norwegian Business School. Senior Vice President of Global Products at Telenor. Chief Operating Officer at Microsoft. Various management positions at Ericsson. Many years' experience from Board positions in various industries. Employed in DNB from 2007 to 2015, returned in 2018 and has held the following roles in the Group: Head of mobile and telephone services, Head of Sales for online and mobile banking and Executive Vice President of eBusiness.

Key positions of trust: Chair of the Board of DNB Eiendom and attending deputy member of the Board of Fremtind Forsikring AS.

Number of shares: 19 244¹

Even Graff Westerveld

Born 1980 | Man |
Norwegian

Group Executive Vice President of Communications & Sustainability since 2023.

Background: Master of Political Science from the University of Oslo. Head of Brand & Communication in the Nordics at Vipps MobilePay, Head of People & Brand at Vipps, Partner and Consultant at Geelmuyden Kiese and Communication Adviser for the party leader and parliamentary leader of the Norwegian Christian Democrats. Head of External Communications at DNB from 2013 to 2020. Rejoined DNB in 2023.

Number of shares: 1 373¹

1 Shareholdings in DNB as at 31 December 2023. Shares held by the shareholder's immediate family and by companies in which the shareholder has decisive influence are also included.

The Board of Directors' report on corporate governance

Corporate governance is a matter of how DNB's Board of Directors, Group Management team and employees carry out their roles so as to manage the Group's assets in a sustainable way, and in the best interests of the Group's customers, owners, employees and other stakeholders. Good corporate governance strengthens people's trust in DNB and in the Group's ability to achieve its ambitions.

The Board of Directors' overall reporting on corporate governance has the following structure:

- The Board of Directors' report on corporate governance (this text) describes the Board's main priorities in 2023, and any significant changes in or deviations from the recommendation from the Norwegian Corporate Governance Board (NUES), 'the Norwegian Code of Practice for Corporate Governance' (hereafter 'the Code of Practice').
- The document 'Implementation of and reporting on corporate governance' describes and explains DNB's corporate governance, and is prepared in accordance with the Code of Practice and Section 3-3b, Subsection 2 of the Norwegian Accounting Act. The document is available at ir.dnb.no.

The Board's overall assessment of corporate governance

DNB follows the Code of Practice, with the following deviations from Section 6 General meetings and Section 14 Take-overs:

Section 6 General meetings: *Shareholders should be able to vote on each individual matter, including on each individual candidate nominated for election elections:* Voting for individual candidates in elections has so far not been allowed, as the need to take into consideration the overall skills mix has outweighed other considerations.

Section 14 Take-overs: *The Board of Directors should establish guiding principles for how it will act in the event of a take-over bid:* The Board has

chosen not to prepare any explicit guiding principles for responding to takeover bids. The reason for this exception is that the Norwegian Government, represented by the Ministry of Trade, Industry and Fisheries, owns 34 per cent of the Group. The purpose of the state ownership of DNB is, among other things, to maintain a leading financial services company with head office functions in Norway, which makes such key principles less relevant.

No cases of significant control failure were identified in 2023. In the Board's view, DNB has the appropriate systems, procedures and measures in place to ensure proper corporate governance and internal control.

Main priorities of the Board of Directors in 2023

DNB's strategy, strategic priorities and the Group's financial ambitions continued to be among the Board's most important tasks in 2023. Following up the changed global picture, with geopolitical uncertainty and the increased cost of living in society, as well as the consequences of this for DNB, was also an important task for the Board. Key focus areas were efforts to ensure a good understanding of risk at all times, including monitoring the regulatory framework conditions, and compliance.

Among the Board's main priorities with regard to corporate governance and compliance were to:

- monitor the work with DNB's strategy;
- monitor developments in the business areas, including the market, customer satisfaction and reputation;

- monitor and assess the anti-money laundering work and support the authorities in the fight against financial crime;
- work with security, including measures to reduce cyber risk;
- work with DNB's transition plan;
- follow up the organisation's implementation of and compliance with external and internal requirements;
- assess various measures for the organisation and employees, including follow-up of sick leave, and succession planning for the Group Management team.

The Board's follow-up of the Group's anti-money laundering work, the cyber security roadmap, the transition plan and the strategy are elaborated on below.

Monitoring of the Group's anti-money laundering work

Criminals are using increasingly sophisticated methods, which means that DNB needs to continuously improve its routines, expertise and systems to fight financial crime. DNB has high ambitions for the quality of its anti-money laundering efforts. The Board maintained a sharp focus on this area in 2023, including by following up the measures that had been implemented. The Group Management team and the Board consider the need for measures in the area of anti-money laundering on an ongoing basis.

Read more about this topic on page 112.

Cyber security roadmap

DNB has targeted efforts related to cyber risk. The Group's cyber security roadmap has been drawn up in line with an international cyber security framework, and defines a number of activities to reduce cyber risk and increase the level of cyber security maturity. The roadmap is a three-year plan that will be concluded in the spring of 2024, where the activities so far have resulted in a number of improvements that have made the bank well equipped to face the threat landscape.

The Board has considered the progress on the implementation of the roadmap and the status of the maturity of DNB's security work via an external maturity survey that was completed in 2023

DNB's transition plan

Sustainability work has long been an integral part of DNB's operations, and in 2021 an overall goal was established that the Group by 2050 will achieve net-zero emissions from its lending and investment activities, as well as in

its own operations. As part of this work, a transition plan was launched that covers the breadth of the Group's operations, and includes emission reduction targets in the lending activities and in areas in which DNB has a role as an investor, as well as in own operations. The Board worked with DNB's transition plan throughout the year and discussed important questions relating to the plan's importance for future operations. The Board adopted the final plan in October 2023, and will follow up further work with this in the time ahead.

Read more about the transition plan on page 64.

DNB's strategy for the period 2022–2027

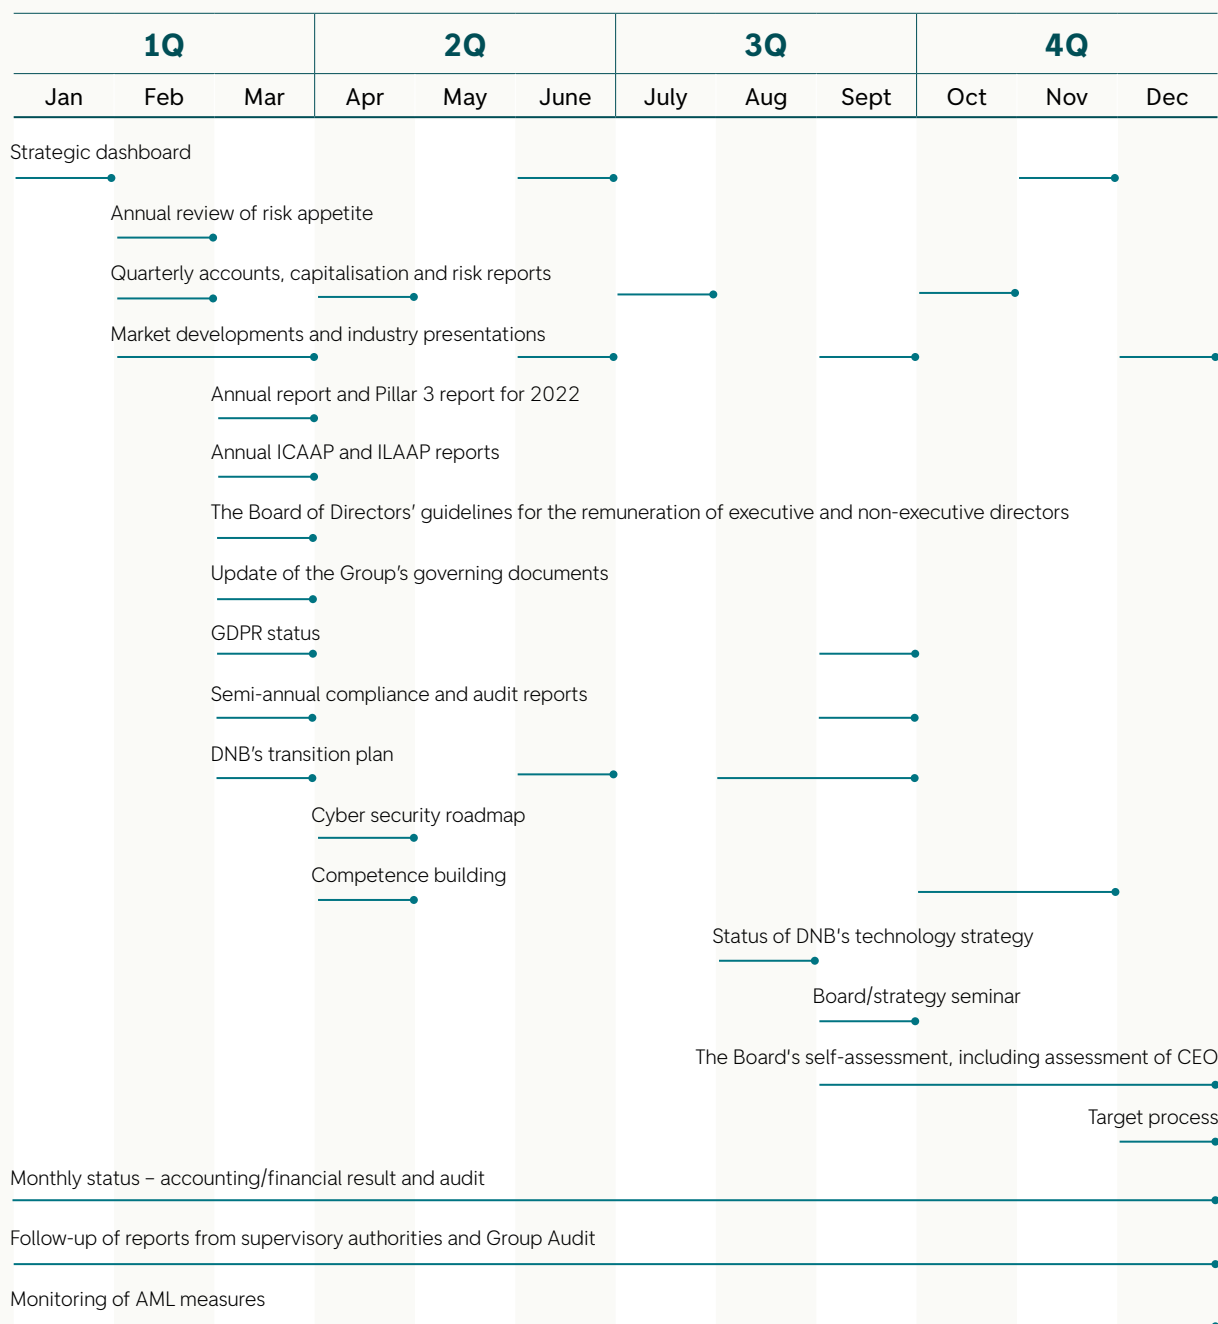

DNB's Group strategy was launched in 2022, and applies to the period leading up to 2027. The strategy sets the direction for the Group in a period of increased macroeconomic uncertainty, greater regulatory requirements and changed customer behaviour and competition. The Group's financial targets and risk appetite set the premises for the Group's strategy. The plan for technology modernisation, competence development and sustainability ambitions are integral parts of the strategy.

The technology strategy combines work with important business goals and market trends in technology. DNB aims to improve IT processes and modernise core systems, further develop security solutions and maintain a strong defence against cyber attacks. The strategy also sets the direction for organisation and secure management of data in DNB.

In 2023, the Board followed up the work with the Group's strategy, including its sustainability ambitions, among other things, through the Board's strategic dashboard and ongoing updates from the business operations. The dashboard shows target attainment in accordance with financial, strategic and sustainability-related indicators. During the year, the Board monitored customer satisfaction associated with customer relationships and the products, services and advisory services the bank delivers, as well as customers' use of the bank's extensive offering and digital channels. The Board also monitored DNB's efforts relating to engagement and diversity, including employees' sense of inclusion and DNB's role in society.

Read more about the strategy on page 18.

The share

The total return on the DNB share, including reinvested dividends, was 18.7 per cent in 2023.

In DNB, our overall objective is to create long-term value for our owners, partly through a positive development in the share price and partly through a predictable dividend policy.

DNB was the second largest listed company on Oslo Børs (the Oslo Stock Exchange), and the largest financial services group in Scandinavia, with a market capitalisation of NOK 328 billion at year-end 2023. For more information on the DNB share, see ir.dnb.no.

Dividends

Our long-term dividend policy is to have a payout ratio of more than 50 per cent of profits as cash dividends, provided that the Group's capital adequacy is at a satisfactory level. We aim to increase the nominal dividend per share every year. Excess capital will be paid out to the owners as a combination of cash dividends and the repurchase of shares.

Read more about share buy-backs in the Directors' report.

Share dividend and payout ratio

- 1 The Board of Directors has proposed a dividend of NOK 16.00 per share for 2023
- 2 Share buy-backs approved by both the Annual General Meetings and Finanstilsynet (the Norwegian Financial Supervisory Authority) based on the accounts for the previous year.

Sustainability ambitions

DNB's sustainability reporting is an integral part of the Group's annual report, and is based on the consolidated financial statements for the period 1 January 2023 to 31 December 2023. The reporting covers DNB Bank ASA and its wholly owned subsidiaries, with the exception of subsidiaries that are held for sale. The report has been reviewed and approved by the Board of Directors, and is in line with the GRI (Global Reporting Initiative) standard. It is based on the materiality analysis that was performed in 2023. The reporting covers DNB's entire value chain, from purchasing to customer and investment activities, and has been verified by the Group's external auditor. The GRI index is available on dnb.no/sustainability-reports.

The policies, guidelines and goals that support our sustainability work generally apply to the loan and investment portfolios, our own business activities, and ESG factors in the value chain. When relevant, any delimitation of the reporting has been made clear.

Sustainability has been integrated into every aspect of our business operations. One of our key strategic ambitions is to deliver sustainable value creation by creating profitable growth and making choices that will stand the test of time. We will be a driving force for sustainable transition, and we will use our position and expertise to actively help customers move in a more sustainable direction, through advisory services, financing and clear requirements.

DNB's sustainability work should reflect our stakeholders' expectations, and our work encompasses each dimension of E, S and G (environment and climate, social conditions and corporate governance). In 2018, we identified focus areas and ambitions for our sustainability work, and in 2021, the level of ambition was raised further, with the inclusion of three revitalised sustainability ambitions for the Group. The ambitions reflect the areas in which we can have the greatest impact, and which represent the Group's greatest risks and opportunities. The 2023 materiality analysis shows that the ambitions from 2021 continue to be areas of importance to our stakeholders and to our ability to achieve long-term value creation.

DNB finances the climate transition and is a driving force for sustainable value creation

In 2021, we set the goal of achieving net-zero emissions from our financing and investment operations, as well as our own operations, by 2050. In the autumn of 2023, as a continuation of the goals set in 2021, we launched our transition plan, which contains updated targets for how we are to achieve our net-zero ambition in 2050. The targets ensure that we as a financial institution further embed climate change considerations into our processes, including our choice of – and dialogue with – customers and the companies we invest in. We have also set a target that we will finance and facilitate sustainable activities worth NOK 1 500 billion by 2030 in the areas of renewable energy, energy efficiency and low-emission solutions.

Read more about our work with climate and the environment from page 61.

DNB is a driving force for diversity and inclusion

DNB is a driving force for diversity and inclusion both within and outside the Group. We will work to ensure that all employees feel included and accepted, and we will ensure that we have a good gender balance in management teams. Through cooperation and communication with suppliers and customers, we will also promote diversity and inclusion outside DNB. As a bank, an important part of the inclusion work will be to contribute to increased financial inclusion and healthy finances for customers.

Read more about our work with diversity and inclusion from page 97.

DNB combats financial crime and contributes to a secure digital economy

In DNB, we place great emphasis on combatting financial crime and contributing to a secure digital economy. We will ensure that sound anti-money laundering work is carried out across the Group by, among other things, reporting all suspicious transactions. We aim to be the bank that customers trust the most when it comes to delivering financial services. We also aim to process and use data and artificial intelligence in a way that promotes a fair, democratic and inclusive society.

Read more about our work with financial crime and information security from page 108.

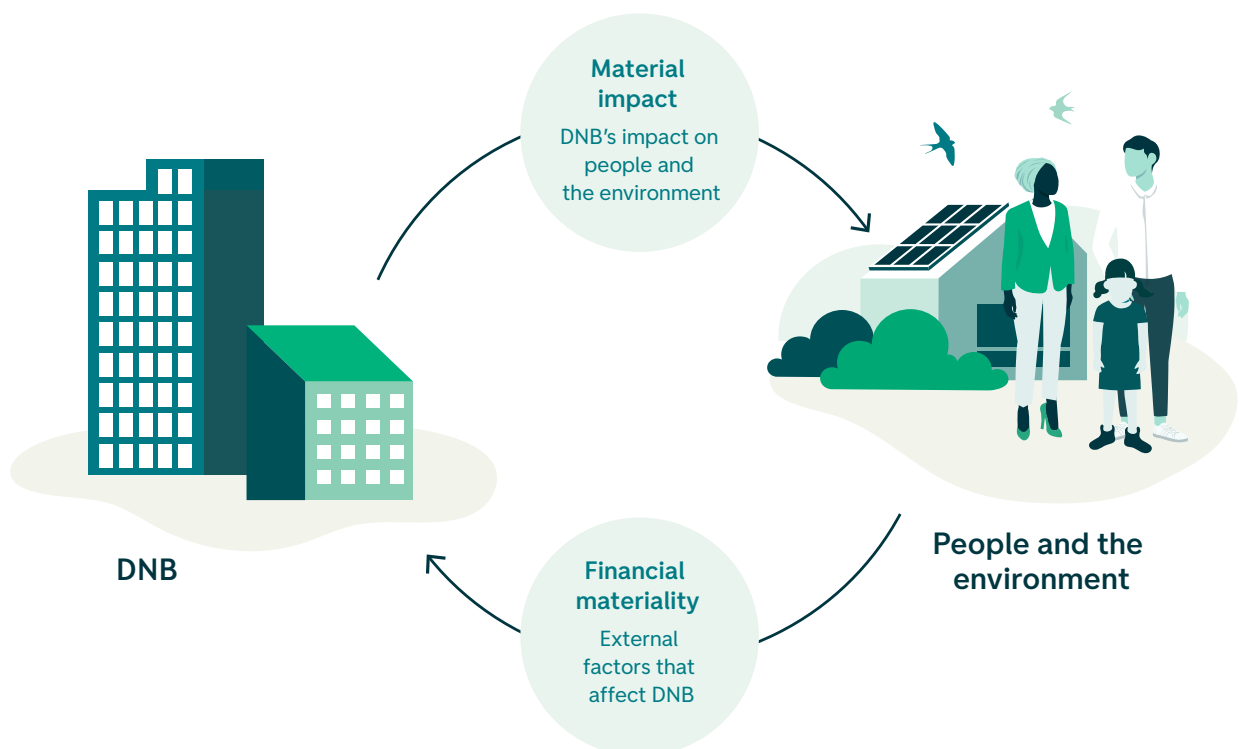

Materiality analysis

To ensure that DNB prioritises the sustainability topics that are most material to the Group's operations and to our stakeholders, the materiality analysis was updated in 2023. The update is based on the previous materiality analysis that was completed in 2021 in accordance with the Non-Financial Reporting Directive (NFRD) and the Global Reporting Initiative (GRI). The analysis has been completed in accordance with the principle of double materiality, and thus assesses both how DNB has an impact on people and the environment (material impact) and how external factors affect DNB's potential for long-term financial value creation (financial materiality).

Through a thorough analysis and the involvement of internal and external stakeholders, DNB has defined five material topics, grouped according to E, S and G (environmental, social and governance) factors that all support our role as a driving force for sustainable transition.

The principle of double materiality

Result and changes from the previous materiality analysis

The five sustainability topics, which show areas in which DNB to a large extent has an impact or is affected are: Climate and environment, Diversity and inclusion, Human rights, Economic crime, and Information security.

In this year's update, we have narrowed and refined the topics and have moved away from process descriptions. There is an increased focus on the topic of Climate and environment among the bank's stakeholders, and it now contains the sub-topics Greenhouse gas emissions and energy efficiency, Circular economy and resource

efficiency, and Biodiversity and ecosystems. Viewing these topics together gives us the opportunity to work more systematically with topics that depend on and have an impact on each other.

The topic Human rights has previously been integrated into the work relating to responsible purchasing and ESG assessments in credit analyses and asset management, but it has now been highlighted as a separate topic, partly as a result of an increased focus both within DNB and as a result of regulatory changes. The former material topic Data protection is now part of the chapter on Information security.

What is a materiality analysis?

A materiality analysis is a method for identifying and prioritising the most important sustainability topics for the company and its stakeholders. The purpose is to find the areas in which the company has the best opportunity to make a positive contribution, and the areas in which the company is at greatest risk of having a negative impact on people and the environment. The analysis is an important tool for ensuring that companies work with the right and the most material areas within the three ESG dimensions: environment and climate, social conditions and corporate governance.

The use of a materiality analysis is a recognised principle in a number of sustainability standards, such as those that belong to the Global Reporting Initiative (GRI), the International Integrated Reporting Council (IIRC) and the Sustainability Accounting Standards Board (SASB), and it is an established element of best practices in sustainability. The EU's new Corporate Sustainability Reporting Directive (CSRD) also includes the principle of double materiality analysis. This means that companies must assess both how they affect the climate, environment and society, and how these factors affect their financial situation and opportunities for long-term value creation. Three criteria are applied when defining whether a sustainability topic is material: 1) whether the company has an impact on the environment or people in this area (material impact); 2) whether external circumstances have an impact on the company's financial situation in this area (financial materiality); or 3) whether the topic fulfils the criteria for both material impact and financial materiality in this area. Material impact and financial materiality are interlinked, and material impact can often give rise to financial opportunities or increased costs for the company.

Process

The materiality analysis is based on methodology from GRI and the CSRD, and covers DNB Bank ASA and its wholly owned subsidiaries, with the exception of subsidiaries that are held for sale. In accordance with the principle of materiality, the analysis has focused on the parts of DNB's operations and value chain where we have the greatest impact.

In order to arrive at the material topics, we have looked at what impact DNB has on people and the environment, as well as the risks and opportunities that may affect DNB's long-term value creation. The results of the analysis indicate where DNB's influential power lies – either directly, through its own operations, or indirectly, in relation to customers.

The process of arriving at DNB's material topics has been carried out using a five-step model:

- Identification of sustainability topics
- Assessment of topics that are relevant to DNB
- Stakeholder dialogue
- Weighting and prioritisation of material topics
- Decision

Identification of sustainability topics

In order to identify relevant sustainability topics, we started by taking a broad approach using several sources, including the topics listed in the European Sustainable Reporting Standards (ESRS 1), ESG topics from external premise providers¹ and DNB's material topics from the period 2018–2022. We also looked into expectations², rules and legislation and requirements in the area of ESG. Based on this preparatory work, we collaborated with in-house experts to develop some early-phase hypotheses which provided a foundation for our future efforts.

Assessment of topics that are relevant to DNB

Considering that DNB is Norway's largest bank, with 237 000 corporate customers and 2 million personal customers, it is particularly through our loan portfolio that we have influential power. As part of the assessment of relevant sustainability topics for DNB, an impact analysis of our loan portfolio was carried out in both 2021 and 2023. The analysis in 2023 was more extensive than the one in 2021, in that we also included loans to personal customers. The impact analysis helps us meet the expectation of identifying social and environmental materiality, as well as our commitments as a signatory to the Principles for Responsible Banking (PRB). The analysis was carried out in accordance with the method for banks devised by the United Nations Environment Programme Finance Initiative (UNEP FI), and is mainly based on the Norwegian loan portfolio. The result was important to the assessment of which sustainability topics DNB has the greatest impact on.

¹ UNEP FI's 'Impact Radar', which has links to the UN Sustainable Development Goals (SDGs), ESRS 1 Appendix A, the European Banking Authority (EBA) and analyses of our competitors.

² State Ownership report, Meld. St. 6 (2022–2023).

Through the analysis and our stakeholder dialogue, risks and opportunities – and their financial impact on DNB's long-term value creation – were discussed and assessed for the various topics. Material impacts are often linked to risks and opportunities, in that they can trigger an opportunity for financial value creation or entail increased costs or loss of income. For example, the transition to a low-emission society creates the risk of loss of income for DNB if our loan customers are unable to handle the changes. On the other hand, the development of products and services that support our customers in this transition create opportunities for increased earnings and reduced risk for DNB. The topic Climate and environment therefore stands out as a topic that may represent a competitive advantage for both us and our customers. In the past few years, there has been a rise in the demand for sustainable financing and advisory services relating to the transition. The demand for sustainable savings schemes is also increasing among

our personal customers. We have taken these financial risks and opportunities into consideration when selecting our chosen topics.

Stakeholder dialogue

Stakeholders' expectations were mapped through surveys of personal and corporate customers, voluntary organisations, authorities, suppliers and other partners, as well as by carrying out in-depth interviews with internal and external stakeholders. The importance of combatting financial crime, as well as safeguarding the climate and the environment, are highlighted by most of DNB's stakeholder groups. The findings from our stakeholder dialogue were discussed in internal workshops where specialists and representatives from the different areas of the Group participated.

"As an owner, we want DNB to influence and help its customers with their transition through dialogue, rather than excluding certain sectors."

"Given how involved DNB is on the lending side, this is where the bank has the greatest influential power. DNB is in a position to set requirements and exert influence."

"DNB's power lies in incentivising the customers it finances through setting requirements. DNB can choose who it grants loans to, which gives the bank power."

Different statements from stakeholders about how DNB can contribute to the sustainable transition

"The G in ESG is most important, and entails a clear responsibility for a bank. There is major downside risk here and an expectation that everything is in order."

"DNB has significant influence on the direction society is heading in, among other things, by offering pertinent knowledge and advice on financing projects with a clear environmental profile."

"You should practise what you preach, so I believe that DNB can inspire other companies through its sustainability strategy."

Weighting, prioritisation and decision-making in connection with material topics

Sixteen key sustainability topics of special relevance to DNB's operations were identified after the work to identify sustainability topics, analyse the loan portfolios of the personal and corporate customer markets, and the stakeholder dialogue. A weighting exercise based on various parameters was then performed, where the entire breadth of DNB was represented, to narrow down the key topics to material topics.

Impact, as well as risks and opportunities, were assessed separately, in accordance with the CSRD methodology:

- **Impact** was weighted, based on scope and severity (significance), in addition to the probability of DNB having an impact in the area in question. As a financial institution, DNB's impact mainly consists of actual impact through our financing and investment activities. Potential impact can be relevant in connection with own operations, but is not considered to be material in this context, due to the scope of this analysis. During the weighting exercise, the main priority was to assess the topics based on their actual impact. Several of the topics were considered to have both a positive and a negative impact, depending on how we approach and work with the topic.
 - **Risks and opportunities** were weighted based on financial effect and the probability of realisation.
-

Everyone involved in the weighting assessed the topics from a short-term and long-term perspective. A custom weighting scale was developed to quantify the materiality of the different topics, and the topics that were weighted highest in terms of impact, as well as risks and opportunities, were given particularly high priority. These topics were in turn assessed by internal experts, before being reviewed by the Group management team and the Board of Directors. The Board adopted the five material topics in June 2023.

Implementation and monitoring

The materiality analysis that was carried out in 2023 shows that DNB's sustainable ambitions from 2021 remain relevant, and that they continue to be important for our stakeholders and for DNB's long-term value creation. The ambitions set the direction for our work and were integrated into the strategy in 2022. DNB's Group policy for sustainability also reflects the material topics and is intended to support employees and managers in their strategic decisions and day-to-day work. The policy is intended to ensure that we comply with our ambition of long-term value creation and that we are conscious of our impact on the climate and environment, as well as on society as a whole. Read more about how we follow up our sustainability ambitions on the next page.

In DNB, we work continuously to assess the Group's material topics and their composition. In accordance with our Group policy for sustainability, we will review the materiality analysis every other year or in the event of material changes, to determine whether there is a need to update it. DNB carries out continuous due diligence and risk assessments as well as dialogue with stakeholders, and follows developments relating to rules, legislation and expectations closely. This may affect how the material topics are prioritised and assessed. Read more about our ongoing stakeholder dialogue on dnb.no/sustainability-reports.

Opportunities relating to sustainability and the sustainable transition are also an integral part of our strategic analyses at business level. Moreover, we work continuously to improve our system for mapping and monitoring our sustainability-related risks. Read more about how we work with sustainability risk in the Pillar 3 report on ir.dnb.no.

Management and follow-up of the sustainability ambitions

Corporate governance

Environment, social conditions and corporate governance (sustainability or ESG factors) are integrated into DNB's strategy and corporate governance. Governing documents set out how we are to work with sustainability and comply with our obligations, and the individual managers are responsible for the implementation of and compliance with this in their respective units. Read more about corporate governance in accordance with the recommendation from the Norwegian Corporate Governance Board (NUES) in Implementation of and reporting on corporate governance 2023 on dnb.no/sustainability-reports.

The Group policy for sustainability is our overarching governing document for sustainability. The policy sets the direction for DNB's work with sustainability, and is intended to support employees and managers in making strategic decisions and carrying out their day-to-day work relating to sustainability. According to the policy, we must take climate and environment into consideration, take social responsibility and ensure good corporate governance in all of our activities. This includes development of products and services, advisory services and sales, investment and credit decisions, production, purchasing and operations. The policy also states which international obligations and principles apply to DNB's activities, such as the obligation to comply with the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct. The policy applies to all of the DNB Group's operations, regardless of geographical location, customer groups and organisational affiliation¹, and has been approved by the Group Chief Executive Officer (CEO). There are separate Group instructions for sustainability in credit activities and for responsible investments, which clarify how the Group policy relating to sustainability is to be complied with in our work with customers and investments. The Group policy

also clarifies roles and responsibilities for follow-up of the sustainability work, and is available on dnb.no/sustainability-reports.

The Board of Directors of DNB has overall responsibility for the company's operations and sets the Group's strategy and overriding goals, among other things, as well as ensuring satisfactory reporting. The Board also adopts the framework for risk appetite and sets limits as to how much risk we are willing to accept in DNB to achieve our goals and ambitions. It is also the Board that is the ultimate decision-maker and that approves the material topics and the integrated annual reporting, which includes financial reporting and sustainability reporting. The Audit Committee follows up the reporting process and serves as an advisory body to the Board.

The sustainability work is presented to the Board and the Group Management team several times a year. Among other things, the Group's strategy is followed up regularly through a dashboard that shows target attainment for the most important strategic ambitions, also in the area of sustainability. It is considered by the Group Management team and the Board three times a year.

Sustainability and ESG factors are increasingly important topics in the Board's work, and in 2023, two of the Board's main priorities were to follow up the work with DNB's transition plan towards the target of net-zero emissions in 2050 and to follow up the work to combat money laundering². The Chair of the Board also participates in the Board network of the Institute of International Finance (IIF), where sustainability topics are regularly on the agenda. The Chair is often the person who introduces discussions about sustainability topics at these meetings, and therefore has a dialogue with in-house experts. Another member of the Board, Christine Bosse, heads the sustainability committee of the Board of Allianz SE.

- 1 The policy does not apply to companies in which DNB has no controlling interest as defined by the Norwegian Private Limited Liability Companies Act, or companies which DNB owns jointly with other financial institutions. Nor does it apply to companies which DNB has taken over or acquired for temporary ownership.
- 2 Read more about the Board's work in 2023 in The Board of Directors' report on corporate governance.

The Group Executive Vice President (Group EVP) of Communications & Sustainability has responsibility for sustainability work at DNB, and leads the Group Sustainability Committee (GSC), which is the advisory body for the Group EVP. The GSC is a Group-wide committee that works to ensure that sustainability is an integral part of every area of our operations, in addition to coordinating efforts and ensuring close follow-up of the Group's strategic sustainability ambitions. The GSC is also responsible for ensuring progress and target attainment in the Group's sustainability work in accordance with the Group policy relating to sustainability, and for performing the assessments of the status of the sustainability-related key performance indicators, as part of the strategic dashboard of the Group Management team and the Board. Further, the GSC is to follow up the Group's implementation of rules and legislation in the area of ESG.

Beyond this, all managers in DNB are responsible for contributing to achieving the goals that have been set for the sustainability work. The managers also have responsibility for implementing approved measures and ensuring that all employees within their own units are familiar with these. Robust corporate governance strengthens DNB's ability to deliver on our strategy and on the goals and ambitions that have been set.

Remuneration of the Group Management team

DNB's guidelines for determining remuneration to the CEO and other members of the Group Management team should, at all times, support our strategy and values, while contributing to the attainment of our targets. The performance-related remuneration of the CEO is based on financial and strategic performance criteria, including sustainability-related criteria. According to the guidelines, 32 per cent of the CEO's weighted performance criteria are linked to sustainability and DNB's sustainable ambitions. The 32 per cent are divided as follows for 2023:

- The performance criterion '**Climate**' has a weighting of 8 per cent, and is subject to a qualitative assessment by the Board. The assessment is based on the achievement of climate-related targets leading up to 2025 and 2030, as well as the Group's position as a driver of sustainable transition. No annual subtargets have been set for the 2025 and 2030 targets, and it is not a given that developments in quantifiable

target areas will be linear in the lead-up to 2025 and 2030. The Board of Directors will make a qualitative assessment of whether the Group has performed sound and risk-based assessments of the targets, and of whether the Group's development is satisfactory in relation to the long-term goals.

- The performance criterion '**Secure and stable IT operations**' has a weighting of 8 per cent, and is measured quantitatively, based on the number of serious IT disruptions throughout the year. The thresholds have been set at a level that is intended to encourage high operational stability and a low number of incidents with a negative impact on customers during the year.
- The performance criterion '**Engagement and diversity**' has a weighting of 8 per cent and is assessed qualitatively, based on employee surveys, gender balance in management and the Group's position in society with regard to diversity.
- The performance criterion '**Compliance**' has a weighting of 8 per cent, and is assessed qualitatively, based on compliance risk in the Group. The assessment is based on, among other things, the Group's ability to reduce risk associated with compliance, including assessments from internal control units and government bodies.

The Board sets the CEO's variable remuneration in accordance with guidelines approved by the Annual General Meeting.³ For other members of Group Management, the Board of Directors' performance assessment of the CEO is given a weighting of 50 per cent. This principle has been established to encourage all units to cooperate to achieve the best results possible for the Group, in accordance with the shareholders' long-term interests. The remaining 50 per cent is a combination of financial and strategic performance criteria associated with the Group EVPs' areas of responsibility

Risk management and internal control in the sustainability work

As DNB is a financial institution, it is subject to strict requirements regarding risk management and internal control. The Board's Risk Management Committee monitors the internal control systems, and ensures that the Group and its units have satisfactory risk management. Read more about our risk management and internal control in Implementation of and reporting on corporate governance 2023, on dnb.no/sustainability-reports.

³ The Board of Directors' guidelines for the remuneration of executive and non-executive directors were adopted by the Board on 9 March 2022 and approved by the General Meeting on 26 April 2022. In 2024, the Board will present a proposal for new guidelines that are adapted to new ownership expectations expressed in the Norwegian government's guidelines on executive pay. The guidelines are available on dnb.no/en/agm.

The risk management work includes sustainability risk, and this risk is part of all of our risk management activities. The requirement to assess sustainability risk is therefore included in the frameworks for all types of risk. Group Risk Management has overall responsibility for monitoring and reporting risks relating to the climate, the environment and social conditions. The reporting takes the form of quarterly risk reporting to the Group Management team and the Board of Directors. DNB's approach to sustainability and associated risks is developing rapidly. Consequently, in the next few years we will work to continue developing our processes and internal control for sustainability risk. Read more about how we work with sustainability risk in the Group's report on risk and capital management (Pillar 3) on ir.dnb.no.

Within the Group's credit activities, sustainability risk is controlled in accordance with the Group policy for risk management and the Group instructions for sustainability in the credit activities, and ESG risk assessments are an integral part of the credit decision process. Activities carried out by borrowers that affect sustainability risk must be analysed in credit proposals on a par with other potentially relevant risk drivers. We measure and follow up the average ESG risk level for borrowers, and for all customers with a high ESG risk score, we require an action plan to reduce their sustainability risk in the long term, in addition to credit assessments being performed at a higher decision-making level.

When a customer has a total credit commitment of more than NOK 8 million, the sustainability risk must be assessed and commented on in the credit proposal. For customers with a credit commitment of more than NOK 50 million, risk classification must also be performed, using an ESG risk assessment tool that has been developed in-house. The tool covers four thematic areas: climate, environment, social conditions and governance. Questions are asked about, among other things, climate accounts, plans for reducing greenhouse gas emissions and risk-reducing measures, and transition risk and associated measures. Our own ESG assessments are supplemented by ESG analyses performed by third parties.

In the asset management activities of DNB Asset Management (DAM), consideration must also be given to key risks and opportunities linked to ESG factors in all investments. The Group instructions for responsible investments must always be followed, and the instruments are intended to ensure that assessments of sustainability risk and opportunities are integrated in the management of the company.

Sustainability reporting

The purpose of our risk management and internal control is also to contribute to reliable financial and non-financial reporting, including sustainability reporting. The work on sustainability reporting is an important topic for the GSC, which follows up the work with regulatory requirements and expectations relating to the Group's sustainability efforts. Data capture and collection in the area of sustainability are developing quickly and often contain more elements of estimation than financial reporting. Some of the most common risks associated with sustainability reporting are associated with:

Completeness and integrity of data

In order to reduce the risk of the data we report being incomplete, incorrect or outdated, throughout the year we worked to improve our systems and processes for data collection, quality assurance, storage and reporting. We follow recognised standards like GRI and the guidelines for sustainability reporting, while at the same time we have integrated a number of information requirements from the EU's Corporate Sustainability Reporting Directive (CSRD) in the annual report. This increases the report's completeness and transparency.

Accuracy of estimate

In order to reduce the risk that results estimated using assumptions are inaccurate or uncertain, we have been transparent in the cases in which we have used estimates. We have also described how the results of the estimates have been prepared, the assumptions that have been applied, and which uncertainty factors affect the results.

Availability of value-chain data

In order to reduce the risk of not having sufficient information about our business partners' risks and opportunities relating to sustainability, we have established processes for following up these partners. We encourage them to share data on sustainability factors, and to use available sources such as industry organisations, certification schemes or public registers. Read more about responsibility in the purchasing chain in Human rights on page 90.

Time of availability of information

In order to reduce the risk that the data that is reported is outdated or will not be updated in time, we have established processes for obtaining updated information, using our central data centre. In industries like shipping, where data is not available on the reporting date, we use the previous year's data. When this is the case, we provide

information about the management of previous years' data, as well as the effect of using the previous year's data.

A selection of the sustainability initiatives DNB is affiliated with

In our sustainability work, we follow Norwegian rules and legislation, but we have also decided to support and participate in a number of global initiatives and international guidelines. This helps further develop our work in the area, as it gives a basis for learning and knowledge sharing, among other things. For a complete

list of the initiatives we are a part of, see the document Support to global initiatives on dnb.no/sustainability-reports. An overview of the initiatives DAM is associated with is also available on dnbam.com/en/responsible-investments/esg-overview-dnb-funds.

We also have an ongoing dialogue with our stakeholders to integrate their input in the decision-making processes that affect them. An overview of our stakeholder dialogue for 2023 is also available on dnb.no/sustainability-reports.

| Initiatives and frameworks | Importance and our role |
|---|---|
| UN Sustainable Development Goals (UN SDGs) | <ul style="list-style-type: none"> → The UN SDGs are the world's joint plan of action to end poverty, fight inequality and stop climate change by 2030. → DNB signed up to the UN SDGs in 2016. Read more about how we work with the SDGs on page 57. |
| UN Global Compact | <ul style="list-style-type: none"> → The UN Global Compact is a UN-supported international network of companies based on ten principles in the areas of human rights, work, environment and anti-corruption. → DNB has supported the UN Global Compact and the ten principles since 2004. |
| United Nations Environment Programme Finance Initiative (UNEP FI) | <ul style="list-style-type: none"> → UNEP FI is a partnership between UNEP and the global financial sector, and DNB has been a member since 1999. → DNB has participated in several UNEP FI projects, including a pilot project to implement the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD) and the Climate Risk Programme. |
| UN Principles for Responsible Banking (PRB) | <ul style="list-style-type: none"> → The PRB initiative was launched by UNEP FI, and its goal is to ensure that the banking sector works to meet the UN SDGs and the Paris Agreement commitments. DNB was one of the founders of the PRB initiative in September 2019. → More than 300 institutions have now adopted the PRB. → DNB reports annually on its compliance with the PRB. The complete report on the Group's compliance with the PRB can be found on dnb.no/sustainability-reports. |
| Partnership for Carbon Accounting Financials (PCAF) | <ul style="list-style-type: none"> → PCAF is an industry-led partnership to facilitate transparency and responsibility in the financial industry, as well as alignment with the Paris Agreement. The partnership provides specific global standards for measurement and calculation of emissions, across countries and financial institutions. → DNB has been part of PCAF since 2022. |

|---|---|
| Skift | <ul style="list-style-type: none"> → Skift is a Norwegian network for climate leaders in business. → DNB joined Skift in January 2023. |
| ZERO | <ul style="list-style-type: none"> → The environmental foundation ZERO is an independent, not-for-profit organisation that was established in 2002. → DNB became one of ZERO's strategic partners in November 2023. → The goal of this cooperation is to combine ZERO's expertise on the environment with DNB's financial and industry competence to explore possible solutions in the energy transition. |
| Responsible Ship Recycling Standards (RSRS) | <ul style="list-style-type: none"> → The RSRS are voluntary principles for financial institutions that are active in ship financing. The aim is to promote responsible practices in the shipping sector by integrating the RSRS into banks' guidelines and financial contracts relating to shipping. → DNB has supported the RSRS since 2017, and all new loan agreements (for new and refinanced loans) secured with collateral in ships, as well as all new offshore loans, have clauses on responsible ship recycling. |
| Poseidon Principles | <ul style="list-style-type: none"> → The Poseidon Principles were developed and launched in 2019 by DNB, Citibank, Société Générale and the Global Maritime Forum, in partnership with leading players in shipping and climate research. → The Poseidon Principles provide a global framework for responsible ship financing that is intended to stimulate decarbonisation of international shipping, promote openness relating to emissions, and include climate considerations in loan decisions. → The 34 banks that have signed the Poseidon Principles have committed to publishing the climate adaptation of their shipping portfolios annually. |
| OECD Guidelines for Multinational Enterprises on Responsible Business Conduct | <ul style="list-style-type: none"> → The guidelines are based on principles and standards for human rights, transparency, anti-corruption, tax, labour conditions, the environment, and consumer interests. → For DNB, the OECD guidelines are of fundamental importance, and they are referred to in our governing documents. These are the guidelines we use as the basis for our customer due diligence and corporate due diligence, as well as our dialogues with companies. |
| UN Guiding Principles on Business and Human Rights | <ul style="list-style-type: none"> → The principles define the duty of states and enterprises to protect themselves from and reduce the risk of human rights violations. → DNB's activities must not violate the rights of other people, and human rights principles are set out in DNB's Group policy for sustainability. → The principles are also reflected in the Group instructions for responsible investment, and they provide important guidance for our exercise of ownership rights. |

| Initiatives and frameworks | Importance and our role |
|--|--|
| UN Principles for Responsible Investment (PRI) | <ul style="list-style-type: none"> → PRI is a UN-supported initiative to encourage investors to incorporate principles for responsible and sustainable investment into investment decisions and active ownership practices. → DNB participates in the initiative to show its commitment to responsible and sustainable investment practices, to benefit from being part of a global investor network and to receive proposals for the improvement of internal processes. → DNB has signed the PRI Advance initiative, which was launched in 2022. |
| Equator Principles | <ul style="list-style-type: none"> → The Equator Principles are a set of voluntary guidelines that provide a joint risk management framework for financial institutions to identify, assess and manage environmental and social risks in project financing. → DNB adopted the Equator Principles in 2008. → For project financing that is subject to the Equator Principles, separate assessments must document compliance with the principles. → In 2020, the Equator Principles were expanded to also apply to projects relating to the financing and refinancing of acquisitions that meet specific requirements. |
| Norwegian Coalition for Circular Finance | <ul style="list-style-type: none"> → The Norwegian Coalition for Circular Finance is an initiative established by the Finance Sector Union of Norway, the World Wildlife Fund (WWF) and Circular Norway. The Coalition is a collaborative arena where participants from the banking, insurance and investment sectors define their needs and gain expertise on how to develop circular products, services and tools adapted to new EU legislation and climate-related and environmental targets. → DNB joined in 2023. |

DNB's work with the UN Sustainable Development Goals

DNB supports all 17 of the UN Sustainable Development Goals (SDGs). However, we have identified some goals that are particularly relevant to our business operations, in areas where we have the greatest opportunity to make a positive impact through our role as an employer, investor, lender, facilitator and provider of financial infrastructure. Our top-priority goals are SDGs 5, 8 and 13. These goals also reflect our sustainability ambitions.

¹ These activities are not based on the definition or the classification system in the EU Taxonomy Regulation.

In addition, we have identified SDGs 7, 9, 10, 12, 14, 15 and 16 as relevant to our business operations. These SDGs also reflect our materiality analysis.

Relevance for DNB

We have an overall goal of achieving net-zero emissions from our financing and investment activities, as well as from our own operations, by 2050. To achieve this, we have set sub-targets for reducing emissions in selected sectors we finance in the period leading up to 2030, as well as for financing and facilitating sustainable activities² worth NOK 1 500 billion by 2030.

DNB's contributions in this area are described on pages 66 and 79.

We have an overall goal of achieving net-zero emissions from our financing and investment activities, and from our own operations, by 2050. To achieve this, we have set sub-targets for reducing emissions in selected sectors we finance in the period leading up to 2030, as well as for financing and facilitating sustainable activities² worth NOK 1 500 billion by 2030. In DNB, we are committed to promoting entrepreneurs, growth companies and innovative business environments, and we organise events such as DNB NXT, a meeting place where ideas meet capital.

DNB's contributions in this area are described on pages 66 and 79.

DNB can contribute to increased financial inclusion and good financial health for its customers, by among other things, providing responsible and user-friendly products and services.

DNB's contributions in this area are described from page 104.

In DNB, we have an opportunity to make a positive impact on resource efficiency through our lending and investment portfolios.

DNB's contributions in this area are described on pages 62 and 76.

In DNB, we have an indirect impact on biodiversity and ecosystems through our lending and investment portfolios.

DNB's contributions in this area are described from page 73.

In DNB, we have an indirect impact on biodiversity and ecosystems through our lending and investment portfolios.

DNB's contributions in this area are described from page 73.

As Norway's largest bank, DNB plays a role in limiting financial losses for society, for our customers and for us as a company.

DNB's contributions in this area are described from page 112.

² These activities are not based on the definition or the classification system in the EU Taxonomy Regulation.

Environment

Climate and environment

Climate change and environmental impact are closely interwoven, with mutual effects, such as loss of biodiversity and changes to ecosystems. These changes pose a risk to the global economy, our customers and our business operations. As Norway's largest financial services group, we have an indirect impact on greenhouse gas emissions and biodiversity through our financial activities. By allocating capital to the transition to a low-emission society, we can help reduce greenhouse gas emissions, preserve nature and increase the efficiency of resource use. Climate and environment are therefore defined as a material topic for us, and we are working with this through three sub-topics that affect each other:

- Greenhouse gas emissions and energy efficiency
- Biodiversity and ecosystems
- Circular economy and resource efficiency

The transition to a low-emission society will require great investments, and financial institutions play an important role in this work. In DNB, we have committed to taking our share of the responsibility, and one of our goals is to contribute NOK 1 500 billion to the financing and facilitating of sustainable activities by 2030. We can achieve this by providing financing, advisory services and investment relating to products and services linked to sustainable activities. Read more about how we work to allocate capital to the sustainable transition under:

- Financing, advisory services and investment

Greenhouse gas emissions and energy efficiency

Link to the UN Sustainable Development Goals:

According to the Intergovernmental Panel on Climate Change (IPCC), human-caused greenhouse gas emissions have resulted in the average global temperature rising by about 1.1 degrees Celsius, compared with pre-industrial levels. Rising temperatures affect the weather, with more frequent and more intense heatwaves and extreme precipitation on land, in addition to marine heatwaves¹. Climate change poses a serious threat to nature and society from a global perspective. In order to limit the rise in temperatures, society must

transition to renewable energy sources. The transition to a low-emission society requires huge investments, and financial institutions therefore play an important role in this transition.

DNB supports the goals of the Paris Agreement relating to reduction of greenhouse gas emissions, and in DNB we work actively to reduce our own emissions in addition to helping our customers make choices that make both their own business operations and society more sustainable. Through our lending and investment portfolios, we have an indirect impact on greenhouse gas emissions, and in 2021 we committed to achieving net-zero emissions by 2050 across our lending and investment portfolios, in addition to our own activities. In 2023, we launched our transition plan, which describes the steps we need to take to achieve this ambition. Our strategy is to work together with our customers through the transition – by financing and advising on real-world decarbonisation, rather than exiting carbon-intensive sectors. We will use our position and expertise to actively help our customers in their transition, through advisory services, capital allocation, and clear expectations. We will continue to promote and participate in the considerable opportunities the energy transition presents by providing financing to renewable and clean energy technologies.

What is climate risk?

Climate risk is about how the physical consequences of climate change will affect nature and society, and what the transition to a society with net-zero emissions will involve. Climate risk may have considerable financial consequences for financial institutions, including defaults on loans, investment losses and stranded assets. Both physical climate risk and transition risk may affect financial institutions.

Physical risk: Risk from climate- and weather-related events, such as heatwaves, droughts, flooding and storms. Such events may result in large financial losses and reduce the value of assets and the creditworthiness of customers.

Transition risk: Risk associated with the transition to a low-emission society. Changes in policy, technology and demand may result in a decline in the value of many assets.

¹ IPCC (2023) Climate Change 2023 Synthesis Report.

Our governing documents for our work with greenhouse gas emissions and energy efficiency:

- **DNB's Code of Conduct:** DNB demonstrates corporate responsibility and contributes to sustainable economic, social and environmental development in the areas and industries in which the Group operates. DNB's corporate responsibility must be reflected in everything DNB does, including investment and financing.
- **Group policy for sustainability:** DNB undertakes to show consideration for the climate, which includes working to be able to measure, report and manage climate risk that the Group is exposed to, both directly through our own operations and indirectly as an investor and lender, and to work to minimise our indirect impact on the environment as an owner/investor, lender and buyer.
- **Group instructions for sustainability in DNB's credit activities:** The instructions describe what we require and expect of customers we grant credit or other facilitated financing to. Among other things, we expect our customers to work on including relevant challenges associated with climate change in their investment planning and on incorporating material risks relating to climate change into their risk management.
- **Group instructions for responsible investments:** The instructions are intended to ensure that assessment of risks and opportunities related to environment, social and governance (ESG) factors are integrated into the management of the company. Our expectations of companies we invest in and the analysis criteria we use relating to the climate are also described in our expectation document on climate change, available on dnb.no/sustainability-reports.
- **DNB's Code of Conduct for business partners:** The Code of Conduct contains requirements and expectations of suppliers relating to climate and environment.

To deliver on the ambitions, we will lead by example and reduce greenhouse gas emissions and minimise the environmental impact of our own operations and purchases. Our ISO 14011 environmental management system ensures that we have procedures, guidelines and processes in place to minimise our climate and environmental footprint relating to our operations and purchases.

Our net-zero ambition also helps reduce the climate risk in our lending and investment portfolios. The goals set in DNB's transition plan will ensure that we, as a financial institution, further incorporate consideration of climate

change in our processes, including our selection of – and engagement with – the customers and companies we invest in. Long-term profitability depends on our customers and the companies we invest in being able to adapt to climate change and the transition to a low-emission society. As part of our work with climate risk and opportunities, since 2017, we have participated in several pilot projects from the Task Force on Climate-related Financial Disclosures (TCFD) under the auspices of the United Nations Environment Programme Finance Initiative (UNEP FI), including testing of their 'Transition Check' tool². We have also participated in the Paris Agreement Capital Transition Assessment (PACTA) pilot project³ that was initiated by the Norwegian

² Transition Check is an online tool that takes a scenario-based approach to assessment of transition risk.

³ PACTA is a tool that measures financial portfolios' alignment with various climate scenarios consistent with the Paris Agreement.

Ministry of Finance. In the short to medium term, transition risk, rather than physical climate risk, is considered to be most material to DNB. Read more about how DNB works to monitor and chart environmental risk in our report Risk and capital management, Disclosure according to Pillar 3 2023 on ir.dnb.no.

Through our participation in various initiatives, we have also committed to working to reduce greenhouse gas emissions and promote energy efficiency. Read more about which initiatives and collaborative projects we have entered into in Management and follow-up of the sustainability ambitions. Our largest owner, the Norwegian government, represented by the Ministry of Trade, Industry and Fisheries, also has expectations regarding the climate and environmental work of the companies it has an ownership interest in. In the State Ownership Report (Meld St. 6 (2022–2023) *Greener and more active state ownership*), it is made clear that the Norwegian government expects companies to identify and manage risks and opportunities relating to climate and nature, in addition to identifying and exploiting the opportunities associated with a shift towards more circular business models. As a financial institution, however, we must balance the needs of our owners and stakeholders when making decisions, as the global community will encounter a number of dilemmas during the climate transition. We must weigh between a fast transition and a just transition – by taking human rights and impact on nature into consideration when developing new energy sources, for example. These must in turn be weighed against the need for energy security during the transition. It is important that the climate and energy transition is carried out in a way that safeguards human needs and social sustainability, as well as the balance between transition risk and physical risk.

What was done in 2023?

The transition plan in brief

On 17 October 2023, the Board of Directors adopted the transition plan, which is an important strategic tool that helps us understand the business implications of our net-zero commitment. It also helps us manage the challenges and opportunities associated with climate change and the transition to a low-carbon economy. The transition plan describes our science-based targets (SBTs) for 2030⁴, the scenarios we have used to draw up our targets, and the external and internal factors that are influencing developments within each sector. At the same

time, the transition plan highlights key dependencies and external factors that have a decisive impact on our ability to achieve our targets.

The targets set in the transition plan require a reduction of greenhouse gas emissions by our customers, as well as in the projects we finance and our own operations. The transition plan covers around 70 per cent of our financed emissions from the lending portfolio, in addition to goals for reduction of our own emissions and emissions relating to the companies in which we invest. The targets in our lending portfolio are based on whether the sectors concerned have extensive greenhouse gas emissions, whether DNB has significant exposure to these sectors, or both. Our goal for the investment portfolio is based on where we can exercise a positive influence and where there is best access to data.

In the development of the transition plan, we worked to set SBTs based on 1.5-degree Celsius climate scenarios, in line with the Paris Agreement. However, a 2-degree scenario was used for the sectors for which a 1.5-degree scenario is not yet available. Read more about the method used to set the targets in the transition plan, which is available on dnb.no/sustainability-reports.

To achieve the targets set in the transition plan, several instruments are available to us:

- **Customer engagement and assessment:** Further integrating climate transition considerations into our engagements with our customers and the companies we invest in, and improving our assessment tools
- **Capital allocation and investment processes:** Further integrating decarbonisation considerations into our capital allocation and investment processes
- **Climate transition expectations:** Communicating clear expectations to our corporate customers and the companies we invest in relating to measures for climate change mitigation
- **Products and services:** Scaling up and expanding our sustainable and transition finance and investment products and services
- **Climate expertise:** Continuously strengthening DNB's climate and transition-related expertise

The work to implement the transition plan in the Group has begun, including the updating of our governing documents on sustainability. We have also started to carry out the activities described in the plan, and to

⁴ In our work with the transition plan, we used guidance from the Glasgow Financial Alliance for Net Zero (GFANZ) and the Science-Based Targets initiative (SBTi). The targets have not been sent to the SBTi for validation.

implement the strategic goals in the organisation. Initially, we conducted an extensive interview process, where key personnel were interviewed to reveal challenges and potential obstacles in our operations. Based on our findings, we have drawn up a list of measures, activities and processes that must be carried out and improved in order to secure progress and coordinated efforts throughout the DNB Group. The intention is for us to ensure progress on the activities we describe in the transition plan, and to facilitate positive development in the strategic scenario in the years ahead. Group

Executive Vice Presidents within each business area and support unit are responsible for implementing the relevant elements of the transition plan and for reporting on progress towards the targets. The Board will also monitor the targets and ensure that the transition plan is in line with DNB's overall strategy, together with the Group Management team. Progress on the decarbonisation goals and any changes are reported each year in the annual report. See the section below, Reducing greenhouse gas emissions in the lending portfolio – by sector.

Decarbonisation targets

| Segment | 2030 interim targets (per cent) |
|---|---|
| Loans | |
| Mortgages | -47% CO ₂ e/m ² /year |
| Housing cooperatives | -50% CO ₂ e/m ² /year |
| Commercial real estate | -29% CO ₂ e/m ² /year |
| Shipping | -33% gCO ₂ /tonne x nautical mile |
| Motor vehicles | -32% gCO ₂ e/km |
| Steel | -30% tonnes CO ₂ e/tonne steel |
| Upstream oil and gas | -18% in committed lending amounts |
| Power generation | N/A |
| Salmon farming | N/A |
| Investments | |
| DNB Asset Management: listed equities and corporate bonds | 58% of the assets under management (AUM) must have SBTs |
| DNB Livsforsikring: listed equities and corporate bonds | -55% portfolio-wide carbon intensity (WACI) |
| DNB Livsforsikring: listed equities and corporate bonds | 51% of the AUM must have SBTs |
| DNB Livsforsikring: external asset managers | 100% of all asset managers must have a net-zero target or SBTs and an action plan by 2025 |
| DNB Næringseiendom | -35% CO ₂ e/m ² /year |
| Own business operations | |
| Motor vehicles | -25.5% gCO ₂ e/km |
| Commercial real estate | EU: -6% kgCO ₂ e/m ² /year USA: -26% kgCO ₂ e/m ² /year Asia: -36% kgCO ₂ e/m ² /year |

Emissions scopes (1–3)

- **Scope 1:** Direct emissions from resources owned or controlled by the company
- **Scope 2:** Indirect emissions from the generation of purchased energy and electricity
- **Scope 3:** All indirect emissions that occur in the value chain (resources not owned or directly controlled), including emissions from the use of sold products

It is important to read the transition plan in its entirety, including the more detailed sections and the Disclaimer section, to understand the full context and background for the plan. Factors beyond DNB's control will affect the Group's ability to reach the targets. The direction is clear, but future emissions reductions will not be linear. For example, from one year to another, we may see increased financed absolute emissions in certain sectors. Our transition plan is therefore dynamic, and will be reviewed and updated in line with progress on data quality, methodology and other material developments.

Reducing greenhouse gas emissions in the lending portfolio – by sector

Upstream oil and gas

Our target is to reduce absolute committed lending volumes in this portfolio by 18 per cent by 2030, using 2019 as the baseline year. By year-end 2023, our committed lending volume was NOK 30.64 billion, meaning a reduction of 14 per cent compared with 2019. It is important to point out that our committed lending exposure is dynamic and subject to fluctuations due to e.g. macro conditions and event-driven situations that are typical for the oil and gas industry.

While the committed exposure metric does not directly measure financed emissions, it is still crucial that our upstream oil and gas customers continue their efforts to reduce emissions from their own operations. We will continue to emphasise these points as part of our customer engagement and internal decision-making processes.

We will also continue to work with dynamic portfolio adjustments and focus the business strategy more on the North Sea market in order to secure progress towards the 2030 target. We will continue to support customers that aim to reduce emissions from their own operations, as well as those that are investing in renewable energy production and clean energy technologies. We will engage with customers to emphasise the need for emissions reductions, and we will monitor our customers' progress closely. These points will also be emphasised in our internal decision-making processes.

Shipping

In 2021, DNB set a target to reduce the emissions intensity of the shipping portfolio by one third by 2030, using 2019 as the baseline year. Progress towards this target is tracked based on data, processes and methods used in the Poseidon Principles, the global initiative that promotes transparency and reporting on the climate alignment of ship finance portfolios, which now has 34 shipping banks internationally as signatories. Our target was set independently of and beyond the Poseidon target trajectories at the time, which were based on the initial greenhouse gas emissions strategy of the International Maritime Organization (IMO), in which the target was to reduce total annual greenhouse gas emissions by at least 50 per cent and to reduce the relative carbon intensity of emissions by 70 per cent by 2050.

The metric used by the IMO in various regulations, in the Poseidon Principles and by DNB in our own target tracking, is the Annual Efficiency Ratio (AER), representing

grams of CO₂ per unit of transportation work, expressed in tonnes-nautical miles. The scope of DNB's target is aligned with reporting under the Poseidon Principles, covering Scope 1 emissions for vessels of 5 000 gross tonnes (GT) and above. We are tracking annual changes in the AER, compared with the baseline year 2019 (indexed to 100) in each subsegment, and we aggregate the changes to a loan-weighted AER delta for the whole portfolio.

In July 2023, IMO adopted a revised greenhouse gas emissions strategy with a goal of net zero 'by or around' 2050, with two different targets, one minimum and one striving target. The Poseidon Principles banks have for the 2023 reporting (of 2022 emission data) implemented the changes in the IMO greenhouse gas emissions strategy, resulting in three different benchmarking trajectories: the 'old' IMO and Poseidon trajectory, a revised IMO minimum trajectory and a revised IMO striving trajectory. The complexity of reporting has also increased, as it now includes emissions throughout the lifecycle of fuels (well-to-wake), and not only direct emissions from vessels. The reporting thus includes most of the Scope 3 emissions in shipping. In addition, the future reporting will also include all greenhouse gases, including methane.

In light of the changes in the IMO strategy and the Poseidon Principles, we are revising and evaluating our current emissions reduction target, and considering whether to adopt one of the two IMO targets, or to explore other alternatives. Complexity, operationalisation, ambition and realism are all factors being considered in this context.

With respect to the current target, the results for 2022 (which are based on data reported under the Poseidon Principles for 2023) showed a reduction in the portfolio-weighted AER of 7.8 per cent, compared with the baseline year of 2019, which corresponds to an index of 92.2. The reduction is a result of a combination of 1) a normalisation of the markets following the COVID-19 pandemic, and fewer disruptions and logistical challenges than in 2020 and 2021, 2) customers' own measures to improve efficiency and reduce emissions and 3) an increased focus on emissions reduction in our capital allocation and customer selection processes.

To reach our target, we engage with customers on their short-term emission reduction plans and longer-term fleet development plans and targets. All customers are now subject to dedicated transition risk assessment in credit papers. Also, we always explore

the potential for sustainable finance linked to carbon reduction with our customers, when discussing new financing agreements. We also explore alternative transition financing solutions to support the industry when we actively invest in energy-saving technologies to cut emissions and prepare for more stringent regulatory requirements and carbon pricing (EU's emissions trading).

Commercial real estate

DNB set an updated emissions intensity reduction target for the commercial real estate portfolio in 2023, of a 29 per cent reduction by 2030, compared with the 2019 baseline. The baseline has been calculated based on the buildings' estimated energy performance and a location-based emissions factor for the relevant underlying energy sources. The physical emissions intensity metric is kg CO₂e/m²/year and the target has been set in line with the Carbon Risk Real Estate Monitor's (CRREM) pathway for limiting global warming to 1.5 degrees. The emissions from a property are primarily driven by the energy used for operating the property over its lifetime (Scope 2), as well as the construction process and the materials used (Scope 3). At present, the baseline value and measured emissions for the portfolio only include Scope 2.

The portfolio's emissions intensity for 2023 was 3.82 kg CO₂e/m²/year, which is below the average intensity for Norway under the CRREM scenario⁵. These calculations are based on the emissions factor for 2022, since updated data for 2023 will not be available until later in 2024. Even though the portfolio's energy intensity declined slightly, compared with the baseline year of 2019, the calculated emissions factor for electricity consumed increased during the period. This entailed an increase in the calculated emissions intensity, compared with that of 2019, which was 3.68 kgCO₂e/m²/year. Major additional improvements in energy efficiency are still needed if we are to meet the target by 2030.

The main levers for reducing emissions in commercial real estate come from improving energy efficiency in buildings and from decarbonising the energy system of society. The latter is to a large extent beyond our customers' control, which is why our focus will primarily be to engage with customers to support them in improving their buildings' energy efficiency. At the same time, we recognise that the emissions factor is volatile, and to a large extent affected by fluctuations in electricity imported to Norway, as neighbouring countries generally have a higher emissions factor. This could result

in a higher financed emissions intensity, despite improved energy efficiency in the portfolio.

In 2024, DNB will continue to engage with customers and provide incentives through green financing. In addition, we will increase our efforts relating to advisory services and information on energy improvements, and increased importance will be attached to energy efficiency in credit risk assessments.

Housing cooperatives

DNB's target for 2030 is to reduce physical emissions intensity in this portfolio by 50 per cent, compared with the 2019 baseline. The baseline and target include Scope 1 and 2 emissions. Due to data limitations, Scope 3 emissions are not included at this point in time. The portfolio's emissions intensity has declined to 3.6 kgCO₂e/m²/year in 2023 from 3.65 in 2019.

Housing cooperatives is a sector with many of the same prerequisites, opportunities and challenges as commercial real estate, and with many similarities to the mortgage portfolio. This means that the main lever that we can control is to improve the energy efficiency of buildings. Improvements in the housing cooperatives portfolio will also have spillover effects to the related mortgage portfolio, and vice versa.

As for commercial real estate, DNB will engage with customers and provide incentives for increasing the energy efficiency of buildings. Forthcoming EU regulations on energy efficiency of buildings, market effects and technological advances are other factors that are expected to have an impact on the decarbonisation of the portfolio.

Steel

DNB's target for 2030 is to reduce the emissions intensity of the steel portfolio by 30 per cent, compared with the 2019 baseline, and including Scope 1 and 2 emissions. Steel is a sector that will play a vital role in the climate transition. It is a high-emitting sector, but it has the potential to contribute to the decarbonisation of other sectors⁶. Because of this, DNB set a new emissions reduction target for the steel portfolio in 2023. DNB has a relatively limited exposure to the sector and our customers are already at the forefront of low-emission steel production. The emissions intensity of DNB's steel portfolio was 0.37 tonne CO₂e/tonne steel in 2022, which is far below the reference climate scenario IEA

⁵ According to the CRREM Global Pathways document, the average (emissions) intensity for Norway was 4.25 kg CO₂e/m² in 2023.

⁶ International Energy Agency (IEA) (2021), A Roadmap for the Global Energy Sector.

NZE2050⁷. This is slightly higher than the 2019 baseline of 0.22 tonne CO₂e/tonne steel. However, we know that the portfolio's underlying companies have improved the emissions intensity of their operations, and that the portfolio's higher average intensity was due to the portfolio composition at the time of measurement.

In DNB, we will continue to support our customers in the sector by engaging in customer dialogue and by providing financing for transition activities.

Power generation

The generation of electricity is expected to increase by 3.2 per cent annually at a global level until 2050⁸. Increasing the share of renewables provides an opportunity to decarbonise both the production of electricity and the sectors that are, and will become, major consumers of this electricity. DNB's power generation portfolio is based on the 1.5-degree global scenario set by SBTi, and the 2019 baseline was 29.3 kg CO₂e/MWh, which is well below the performance level required by 2030 and reflects DNB's strategic decision to primarily finance renewables within this portfolio. The baseline covers Scope 1 emissions for all on-balance sheet exposure in the power generation portfolio for both financing to corporate customers and project financing. Given the low level of the baseline, we have not set an emissions reduction target, as it would limit the flexibility we need to support customers with credible transition strategies. The portfolio's emissions intensity was reduced further to 18.1 kgCO₂e/MWh by year-end 2022.

In DNB, we will maintain our industry strategy of financing renewable energy and power-related infrastructure. We will continue to deliver on our ambition to increase our exposure to zero- and low-emission technologies while supporting customers with transition strategies. We will continue to finance established technologies such as hydropower, wind power, solar power and electricity transmission and district heating systems. Additionally, we will evaluate new related clean energy technologies and business models as they emerge.

Salmon farming

The global food system accounts for a substantial part of global emissions, and salmon farming can play a part in reducing these emissions. Salmon is already a relatively

low-emission source of protein, but given a growing global population, what we eat will become increasingly important. Due to DNB's exposure towards the sector, we have decided to measure the carbon footprint of the portfolio on an annual basis. Since there is no sector-specific climate scenario available, we have chosen not to set a specific decarbonisation target for this portfolio, but we will also work to improve the emissions intensity of the portfolio through active dialogue with our customers and to support and finance initiatives that will lower emissions in the sector.

The portfolio's average emissions intensity for Scope 1 and 2 has gone from 0.81 kgCO₂e/kg HOG (Head-On-Gutted) in 2019 to 0.66 in 2022. The portfolio's Scope 3 emissions have gone from 4.47 kg CO₂e/kg HOG to 4.77.

We will continue to have sustainability and emissions reductions high on the agenda when in dialogue with our customers. Since 2019, DNB has granted and facilitated more than USD 22.5 billion in sustainable finance transactions, including green and sustainability-linked loans, for the sector.

Mortgages

DNB has set a target of reducing the emissions intensity of the mortgage portfolio by 47 per cent by 2030, to 1.95 kg CO₂e/m²/year, compared with the baseline year of 2019. The target covers DNB's full portfolio, it includes Scope 1 and 2 emissions, and it will be adjusted to include the Sbanken portfolio once it has been integrated⁹. The targets are based on recommendations from the Net-Zero Asset Owner Alliance (NZAOA) and SBTi. We have used the CRREM scenario¹⁰ because it is in line with NZE2050 scenarios from SBTi and the IEA, and because it provides a procedure for estimating emissions to the various property groups¹¹ that make up the private market. CRREM is also the scenario used for external reporting.

The portfolio's emissions intensity is calculated based on the buildings' energy labelling¹², national statistics for the energy mix in Norwegian homes and a location-based (Norway) emissions factor for the relevant energy sources. The calculations use a location-based emissions factor for 2022, as the emissions factor for 2023 will not be available until later in 2024. When energy certificates

7 Net Zero Emissions by 2050 Scenario from the International Energy Agency (IEA). The scenario is a normative scenario that shows a path for the energy sector towards achieving net-zero CO₂ emissions by 2050.

8 International Energy Agency (IEA) (2021), A Roadmap for the Global Energy Sector.

9 The emissions intensity of the Sbanken portfolio will be calculated once Sbanken is fully migrated into DNB's systems.

10 CRREM Global (<https://www.crrem.org/>).

11 CRREM provides a procedure for estimating emissions for the property types detached houses and flats.

12 Based on Enova's grading scale (<https://www.enova.no/energimerking/om-energimerkeordningen/om-energiattesten/karakterskalaen/>).

are not available, the emissions intensity of a building will be estimated using property-specific data. When property-specific data is insufficient, the building will be assigned an emission value, based on the average for the portfolio. The calculations are performed in line with Finance Norway's sector-specific guide for use of the Partnership for Carbon Accounting Financials' (PCAF's) international carbon accounting standard for the financial industry. Using the current methods, DNB has calculated an emissions intensity of 3.75 kg CO₂e/m²/year for the entire mortgage portfolio for 2023, which is slightly higher than the baseline year 2019 (3.69 kg CO₂e/m²/year). Compared with the baseline year, we have received better data about the buildings' actual energy labelling. This may mean that we estimate a somewhat higher energy consumption now than we did using the data available to us before. Based on the PCAF data quality scale¹³, we scored 3.21 in 2023, which is an improvement from 3.95 since the baseline year of 2019. This was due to access to more energy labelling of homes. In DNB, we are working continuously to improve data quality to ensure that we have the best data possible to calculate our emissions.

To achieve the goal, going forward we will actively support and encourage our customers to improve energy efficiency in their homes, but target attainment also requires considerable investment in the Norwegian housing sector. Our customers must be made aware of forthcoming regulatory requirements relating to energy efficiency, new subsidies and suitable measures they can implement to improve the energy efficiency of their homes in the most cost-efficient way. By giving our customers good advice, we can help them understand the need for and benefits of increasing the energy efficiency of their homes. To succeed in this work, it will also be important to invest in our employees' competence on this subject.

Financing the costs of energy efficiency measures is one of the greatest barriers for most homeowners, and demand for suitable financing solutions is increasing. We will accordingly attempt to achieve our net-zero target while safeguarding our commitment to financial inclusion in Norwegian society. We will also explore new partnerships in order to be able to offer customers a broader range of services and achieve closer integration with governmental support schemes.

Forthcoming regulations and market standards highlight the importance of increasing the energy efficiency of the real estate sector to achieve the global climate goals¹⁴. DNB will engage with relevant decision-makers to influence the design of sector-specific regulations, public support schemes and incentives that can motivate consumers and companies to make sustainable investments in their homes and buildings.

Environmentally friendly transport

DNB's target for 2030 is to reduce the emissions intensity of our financing of motor vehicles by 32 per cent, compared with the 2019 baseline. Emissions have been calculated in accordance with the PCAF standard, and cover financed Scope 1 and 2 emissions. The data that is used to calculate emissions ranges from actual consumption and emissions data to national and European average factors. The emissions intensity reduction target is calculated using the Sectoral Decarbonisation Approach (SDA) tool from SBTi and the emissions scenario built into the Beyond 2°C scenario tool.

In 2023, the portfolio's emissions intensity was 58 gCO₂e/km, which is a 35 per cent reduction compared with the baseline year of 2019. The decline is generally due to greater financing of emission-free vehicles. An increase in the financing of emission-free vehicles is expected in every market in which DNB is represented. At the same time, policy tools and support schemes have a bearing on the transition to emission-free vehicles.

As data quality improves in the time ahead, we will update our emissions target for motor vehicles to a 1.5-degree scenario. We will also work to encourage more customers to choose emission-free vehicles, but we will continue to offer financing of fossil vehicles to customers who cannot choose emission-free vehicles for range-related or financial reasons. The reduction in emissions intensity is also closely linked to forthcoming national and EU regulations on zero-emission vehicles.

Reducing emissions in the investment portfolio

In line with DNB's net-zero emission ambition and the transition plan, DNB Asset Management (DAM) has set a new target that 58 per cent of the companies in DAM's portfolio must have set a science-based emissions reduction target by 2030. If the world is to achieve net

13 The PCAF scale for data quality goes from 1 to 5, with 1 as the highest possible level of data quality. The data quality affects how precisely the portfolio's emissions are calculated.

14 European Commission – "Questions and Answers on the revision of the Energy Performance of Buildings Directive" (https://ec.europa.eu/commission/presscorner/detail/en/qanda_21_6686).

zero by 2050, all companies should have set such a target by 2040, according to SBTi¹⁵. The target of 58 per cent in 2030 assumes a linear development in the number of companies with such targets, based on 2022 figures. By the end of 2022, 24 per cent of companies in the portfolio had such a target, and at the end of 2023, the proportion had increased to 30 per cent¹⁶. We do not want to exclude companies with high emissions from our investment universe because we believe that the companies with the most substantial emissions are the same ones that could have the greatest influence on the green transition through good emission strategies. Active ownership will be our most important tool here.

DAM has engaged in dialogues with companies for several years to discuss climate reporting and targets, but the dialogues will become even more focused in line with our new target. In addition, we seek to vote at the annual general meetings of all Norwegian companies in our portfolio, all of the companies in which we have holdings through actively managed mutual funds and all of the annual general meetings at which shareholder proposals are presented. We see that proposals relating to the environment are to an increasing extent made at these meetings. In 2023, we voted at a total of 1 352 company meetings. Going forward, it will also be important to consider whether proposals support our ambitions, and we will encourage openness by also becoming more transparent and strengthening our climate reporting.

We are already in the process of mapping and influencing the 30 companies in the portfolio that contribute most to our emissions, and ensuring that they set targets that are realistic and science-based and reduce their emissions in accordance with these targets. Link to our information page relating to voting, which shows how DAM votes: <https://vds.issgovernance.com/vds/#/OTY1Nw==>.

In 2023, the ambition of net-zero emissions was further integrated into the company's active ownership efforts and this has also been important in the efforts to continue developing mutual funds with a sustainability profile. This work was reinforced through the transition plan, which sets ambitious emissions reduction targets. We also repeated the 2022 mapping of the emissions intensity of our portfolios and continued the work of collecting data to further improve the integration of our ambition of net-zero emissions in our investment processes. The result of the mapping is also used to choose which companies we engage in a dialogue with. This year's mapping showed

a reduction in the emissions intensity of several of the mutual funds, and for the portfolio as a whole. For more information about this, see DAM's annual report on dnb.no/sustainability-reports.

Throughout 2023, DAM also:

- Participated in the Norwegian investor cooperation for climate and diversity, together with several of the largest companies on the Oslo Stock Exchange, Oslo Børs.
- Worked to close data gaps in the mapping of the emissions intensity of the portfolio using recognised methods and tools. See the description in DAM's annual report for 2023 on dnb.no/sustainability-reports.
- Increased the number of mutual funds with sustainability-themed criteria in the fund mandate that ensure that investments are made in companies with a sound environmental and social profile.
- Entered into 61 dialogues with companies regarding the climate.
- Of these 61, we engaged in 26 dialogues to influence the 30 companies in the portfolio that contribute most to our emissions. We do this to help ensure that they set targets that are realistic and science-based, which in turn helps us reach our targets set in the transition plan. The targets should be approved by SBTi, but we also approve targets that meet our self-defined criteria for SBTs.
- Conducted a survey of Norwegian issuers of fixed-income funds, with emissions reduction targets as a separate topic.

Reducing the emissions intensity of the life insurance portfolio

Our goal is to reduce the emissions intensity of the life insurance portfolio by 55 per cent (Scope 1 and 2) by 2030, compared with the level in 2019. We use the Weighted Average Carbon Intensity (WACI) model and data from MSCI ESG Research to measure emissions intensity. Our reporting is based on listed shares and corporate bonds, as the data quality for other asset classes is poor.

In 2023, the WACI of the portfolio was 59.87 tonnes CO₂e/MUSD revenue, and the emissions intensity of the portfolio was reduced by 25 per cent, compared with the 2022 level. Since the baseline year of 2019, emissions have been reduced by 44 per cent, which is well within the target of a linear reduction by 2030.

¹⁵ Science-Based Targets initiative (2022) Foundations for science-based net-zero target setting in the financial sector.

¹⁶ ©2024 MSCI ESG Research LLC. Reproduced by permission. Note, the displayed data is based upon the most recently available data at the reporting date.

The reasons for the reduction include a significant reduction in global emissions intensity and the fact that the proportion of technology companies in our portfolios increased in 2023. Such companies often have a low emissions intensity. The proportion of energy companies, which often have a high emissions intensity, was also reduced during the year. This sectoral shift in the portfolio is due to both market developments and the choice of companies in our managers' portfolios. Based on past fluctuations, we expect developments to vary greatly going forward.

We have also set a coverage target for the portfolio, based on guidance from SBTi, which means increasing the proportion of investments in shares and corporate bonds with science-based emissions reduction targets. The target is for 53 per cent of the company's AUM to have SBTs by 2030. This is calculated as a percentage of the holdings within the scope of the coverage target, which includes shares and corporate bonds. In 2023, 33 per cent of our investments had SBTs for emissions reduction.

We also aim for all of our fund managers to have net-zero targets or SBTs by 2025, and we will exercise active ownership via fund managers to influence the 15 companies in the portfolio with the most substantial emissions. Going forward, the emissions reduction target will be supported by these goals, which will serve as tools for assessing and controlling climate risk in our portfolios by following developments in emissions from our investments, and monitoring whether our work on active ownership is having the desired effect.

Reducing the emissions intensity in DNB Næringseiendom

DNB Næringseiendom's goal is to reduce the carbon intensity of its portfolio by 35 per cent by 2030, compared with the level in 2019. The goal covers 84 per cent of the portfolio, and is based on the CRREM scenario that is consistent with the Paris Agreement, and includes Scope 1 and 2.

To achieve the goal, DNB Næringseiendom will focus on reducing energy-related emissions from operation of the properties and will carry out planned sustainable projects, where concrete energy-saving targets are defined in the project plans. This will largely be done in connection with the upgrading of properties. Each property has its own environmental targets, with measures and plans for achieving them.

DNB Næringseiendom uses a set of key figures to improve the environmental quality of the portfolio, with emphasis on reducing greenhouse gas emissions, reducing energy consumption and performing third-party certification of buildings. BREEAM¹⁷ certification is important for defining the environmental standard and for contributing to continuous improvement of the buildings in the portfolio.

In 2023, we achieved carbon savings of 7.8 per cent, compared with the 2019 level. The reductions come from ordinary operation of buildings and execution of projects. In the work to achieve the goal, going forward, we will:

- Reduce the impact on climate and environment by highlighting patterns of behaviour, products, services and technical solutions that may reduce CO₂ emissions.
- Integrate climate and environment in our everyday operations.
- Actively manage and monitor climate risk.

Reducing emissions from our own operations

DNB's contribution to the climate transition starts with our own operations, and in DNB we are working continuously to expand the scope of the emissions we measure and to set concrete targets for reducing these. In 2023, we set Scope 1 and 2 targets for our own operations in the lead-up to 2030. In Scope 1, we will reduce the emissions intensity of our own vehicles by 25.5 per cent by 2030, from 83.77 gCO₂e/pkm in 2022 to 62.39 in 2030. In 2023, the emissions intensity was 67.45 gCO₂e/pkm. In order to achieve the target, we will, among other things, replace fossil-fuel powered cars with electric cars. In Scope 2, we will reduce our energy consumption, measured in kgCO₂e/m², at our offices.

Energy consumption at our offices

| Measured in kg CO ₂ e/m ² / year | 2023 | 2022 | Change from 2022 to 2023 (per cent) | Target for 2030 |
|--|------|------|--|--------------------|
| EU | 4.6 | 4.7 | -2 | 4.4 |
| USA | 44.9 | 24.8 | +81 | 18.4 |
| Asia | 54.1 | 51.5 | +5 | 33.1 |

In 2023, there was a reduction in energy consumption per square metre in DNB's office premises in the EU compared with 2022, while there was an increase in the

17 Building Research Establishment Environmental Assessment Method.

office premises in Asia and the US. The increase was partly due to the improved quality of measured data, but the sharp increase in the US was also due to our changing the emissions source for calculations from the one used when the transition plan was drawn up. This will be corrected when the transition plan is updated. To achieve the Scope 2 goals, we are dependent on a reduction in the carbon intensity in the energy mix at each location. At the same time, we will continue to work systematically to identify and carry out energy-reducing measures in Norway and at our international locations.

Development in measured emissions

Every year, we report our greenhouse gas emissions associated with own operations for Scope 1 and 2, and for selected categories in Scope 3, including energy consumption, travel, waste management and emissions from data centres. In 2023, our total emissions from our own operations were 7 745 tCO₂e. This is an increase of about 16 per cent compared with 2022. The increased emissions are partly associated with improved quality of the reporting of energy consumption, and our having included more data in our Scope 3 emissions. The increase was also partly due to an increase in the emissions factor for air travel, even though air travel in 2023 was relatively stable, compared with 2022. For more detailed information on calculations of our emissions, see our annual carbon accounting report on dnb.no/sustainability-reports. The report has been prepared by an external supplier.

Since 2014, we have bought carbon credits for all direct and indirect emissions from our own operations (e.g. from air travel and waste management), in addition to guarantees of origin (GOs) for our electricity consumption. For our 2023 emissions, we bought carbon credits worth 6 413 tCO₂e, in two projects certified by the Gold Standard Project.

How we work to reduce emissions from our own operations

We have worked systematically for several years to reduce greenhouse gas emissions from our own operations, including by optimising our land use and by establishing energy monitoring systems that have resulted in the energy consumption having been reduced by 26 per cent per square metre in the period 2014–2023. We will also keep up the continuous work to reduce waste and maintain the degree of recycling, in cooperation with environmental services provider Norsk Gjenvinning. In 2023, we also established DNB's sustainable food strategy leading up to 2030 (in Norwegian only), which is intended to reduce greenhouse gas emissions associated with the serving of food. Since 2019, we have reduced the food waste per guest by 23 per cent.

We are continuing to work purposefully to reduce the footprint from own operations, and we have ongoing activities to set targets for emissions reduction in several categories in Scope 3 by 2030. The supply chain is a material source of emissions from own operations, and environment and sustainability are important topics in our work relating to purchasing. We urge our suppliers to offer more environmentally friendly alternatives, and we require various certifications, when relevant. We also collaborate with suppliers on extending the life of products once they are no longer of use to us.

| Emissions in tCO ₂ e | 2023 | 2022 | 2021 |
|-----------------------------------|--------------|--------------|--------------|
| Total direct emissions, Scope 1 | 168 | 186 | 242 |
| Total Scope 2 (location-based) | 1408 | 1 626 | 1 914 |
| Total Scope 2 (market-based) | 210 | 119 | 118 |
| Scope 3 emissions | | | |
| Waste | 233 | 228 | 159 |
| Business travel | 5 219 | 3 813 | 1 014 |
| Other | 717 | 811 | 576 |
| Total indirect emissions, Scope 3 | 6 169 | 4 851 | 1 749 |
| Total emissions, Scope 1–3 | 7 745 | 6 663 | 3 904 |

Biodiversity and ecosystems

Link to the UN Sustainable Development Goals:

Across the globe, well-functioning ecosystems and biodiversity are threatened by human activity, and there is broad consensus that climate and nature are closely interlinked¹. The Intergovernmental Panel on Climate Change (IPCC) and the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) have said that reducing emissions is not enough – the destruction of nature must be stopped and damaged nature must be restored if we are to be able to solve the climate crisis. We influence biodiversity and ecosystems through our lending and investment activities, as well as through our own operations and purchasing. Our direct impact through our own operations is limited, but we are aware that changes are also brought about through small, local measures such as waste sorting, reduced food waste and responsible purchasing of goods and services. Our indirect impact through lending and investments is far more material, and may entail both risks and opportunities for DNB.

Access to natural resources is the key to value creation for a number of companies in our lending and investment portfolios, and reduced access to natural resources will affect these companies' viability and profitability, which in turn may affect DNB's profitability. Companies should therefore assess the risks associated with their impacts and dependencies on nature and seek to make the transition from a linear to a circular business model. Read more about how we work with circular economy on page 76.

For several years, we have raised the topic of biodiversity through ESG risk assessments, expectations and dialogue with the customers we finance and invest in. In 2022, we also adopted a position statement declaring that we will promote biodiversity and reduce natural risk. Through our participation in various initiatives, such as the

Partnership for Biodiversity Accounting Financials (PBAF) and Nature Action 100, we have also undertaken to work with biodiversity and ecosystems. Read more about which initiatives and cooperation we have entered into on page 53.

What was done in 2023?

Lending to corporate customers

Several of the EU's regulatory initiatives, including the EU taxonomy for sustainable activities, the Corporate Sustainability Reporting Directive (CSRD with associated reporting standards, ESRS) and the Sustainable Finance Disclosures Regulation (SFDR) contain biodiversity elements and associated metrics. DNB takes a positive view of the fact that access to standardised and company-specific data is increasing. This will increase opportunities for assessing risk relating to biodiversity in the loan portfolio. For most of our corporate customers, the risks and opportunities relating to nature and biodiversity remain a relatively new topic. Some customers have already met nature-related requirements for a long time through regulation, licences, and emission permits, but also through various industry-specific standards that are voluntary. In April 2023, we participated in talks with several existing and potential customers at the Mineral Industry Days organised by the Norwegian Mineral Industry. Here, we were given an introduction to Towards Sustainable Mining (TSM) – a leading standard for sustainability in the mining industry. Among other things, the standard has a separate framework and a protocol for biodiversity conservation management. There is now a lack of secure access to critical minerals that are necessary for the green shift in Europe. An increased understanding of – and insight into – how nature and biodiversity can be taken into consideration in the minerals industry is a prerequisite for being able to finance extraction of promising deposits of critical minerals in Norway and the Nordic region.

The work to integrate the consideration of biodiversity and ecosystems has otherwise continued in customer dialogues in the real estate sector, the seafood industry and the food industry. We have also updated this topic in

¹ Norwegian Ministry of Climate and Environment (2021) Klima og natur henger sammen (Climate and nature are interconnected – in Norwegian only). (<https://www.regjeringen.no/no/tema/klima-og-miljo/naturmangfold/innsiktsartikler-naturmangfold/klima-og-natur-henger-sammen/id2722684/>).

Our governing documents for our work with biodiversity and ecosystems

- **DNB's Code of Conduct:** DNB demonstrates corporate responsibility and contributes to sustainable economic, social and environmental development in the areas and industries in which the Group operates. DNB's corporate responsibility must be reflected in everything DNB does, including investment and financing.
 - **Group policy for sustainability:** DNB undertakes to show consideration for the environment and to conduct operations that have the smallest possible negative impact on the external environment. In addition, we will work to minimise our indirect impact on the environment in our role as owner, investor, lender and purchaser.
 - **Group instructions for sustainability in DNB's credit activities:** The instructions document what we require and expect of our customers. In addition to the general expectations of due diligence and measures to reduce the negative impact on nature and ecosystems as far as possible, exclusion criteria have been established for specific activities. When it comes to customers operating in industries with a large potential negative impact on climate, nature, biodiversity and water resources, it is in our interest to help these customers reduce their environmental footprint and consumption of collective goods in a responsible manner.
 - **Group instructions for responsible investments:** The instructions are intended to ensure that DNB does not contribute to serious damage to the environment and that an assessment of risks and opportunities relating to the environment is integrated into the management of the investments. Our criteria for analysis and our expectations of companies we invest in, in terms of biodiversity and ecosystems, are also described in our expectation document relating to biodiversity (including deforestation), which is available on dnb.no/sustainability-reports.
 - **DNB's Code of Conduct for business partners:** The guidelines contain requirements and expectations relating to biodiversity and ecosystems.
-

our ESG risk assessment tool. The tool, which is used for borrowers, is also being updated to include, among other things, a new industry-specific module for aquaculture. The module contains several questions relating to loss of biodiversity and ecosystems.

DNB has made a commitment to follow up the Equator Principles for project-related financing. This entails, among other things, that we follow strict standards and procedures to safeguard and protect nature and biodiversity for the projects we finance, and that have a considerable potential impact on biodiversity and

ecosystems. For such project financing, we will demand that thorough impact assessments are performed relating to flora and fauna, so that species that may be affected negatively are mapped. For projects where the inherent risk of this is high, we will engage an independent expert who will assess whether the risk mitigation measures proposed by the customer are satisfactory. Where this is not the case, we will require that corrective action is implemented to ensure compliance with the Equator Principles. In 2023, we participated in several meetings with the Taskforce on Nature-related Financial Disclosures (TNFD) through the Equator Principles cooperation. This

increased our understanding of how the analyses we require from our project sponsors can be adapted to the TNFD's framework, which consists of the following elements: Locate, Evaluate, Assess and Prepare. In 2023, we continued to encourage customers, when relevant, to report their impact on nature and their contributions to reducing loss of biodiversity and ecosystems to the Global Biodiversity Information Facility (GBIF).

Investments

In 2021, our asset management company DNB Asset Management (DAM) launched an expectation document relating to biodiversity that targeted companies. When we have meetings with companies, we often ask for feedback on whether they consider the document to be relevant, as well as information about any deviations in the companies' practice. In 2023, we decided to elevate biodiversity to become a long-term focus area for active ownership. This means that it has joined the topics that we consider to be most material in relation to active ownership of the companies in DNB's investment portfolios in the years ahead.

In 2023, DAM conducted 43 dialogues focusing on biodiversity (including deforestation and land use). In 37 per cent of the dialogues, we were able to point to progress in the company's work since the last time the matter was discussed. The dialogues took place both individually and through various investor collaborations and initiatives, including continuation of the FAIRR Initiative². The cooperation with FAIRR includes engagements on sustainable proteins, meat sourcing, and sustainable aquaculture. We also participated in a new initiative through FAIRR that covers 'Biodiversity Loss from Waste & Pollution', with pork and chicken producers as well as fertiliser companies. The focus here is on better management of manure and animal waste, and on minimising the negative impacts of nutrient pollution on biodiversity and ecosystems, as well as the effects of this on biodiversity and ecosystems.

Other examples of dialogue activities are our participation in the Investor Working Group for a Deforestation-free Automotive Industry, where we have attended meetings with major manufacturers of products for the automotive industry, in collaboration with Rainforest Foundation Norway. Rainforest Foundation Norway has provided valuable support to our work with biodiversity, and we have collaborated with them on many projects during the past year. We also participated in an investor conference with Norges Bank Investment

Management (NBIM) and Rainforest Foundation Norway to discuss how we work with biodiversity at DNB.

Several of the EU's regulatory initiatives also contain some elements of biodiversity and associated metrics. DAM takes a positive view of the increasing amount of standardised company data that is available, as we see the importance of good data when exercising active ownership. Increased reporting requirements have also resulted in us spending considerable resources on gathering and producing relevant data on companies we have invested in. We have also encouraged companies to report on the indicators that are defined in the SFDR, so that we as asset managers can use this data to integrate biodiversity into investment decisions..

The way forward

In dialogue with investors, authorities and other stakeholders, nature is becoming an increasingly important topic. Moreover, there are a growing number of nature-related reporting requirements. Various new guidelines, tools and frameworks have been developed and completed in a short period of time. We have begun a large project relating to nature, where we are mapping our impacts and dependencies on nature through our lending and investments in material sectors, in addition to related nature risks and opportunities. This work will continue in 2024.

The mapping is based on available data and tools that show which sectors and geographical areas have the greatest dependencies and impacts on nature. The mapping phase means that we can focus our work on the areas where we face the greatest risk, and where we have the greatest opportunity to make an impact. This work provides a foundation for strategic work on selected sectors, setting relevant and measurable indicators and targets, and better enabling us to meet future requirements and expectations.

In DAM, in the time ahead we will work to define best practice in order to be able influence companies in the right direction in terms of integration of biodiversity. We will also influence companies to report on biodiversity, but obtaining good and credible data is a challenge for many. The TNFD will guide companies in this reporting, and it is therefore important to follow its work going forward. In 2023, DAM used the TNFD framework to analyse the content of portfolios and to focus its work on active ownership. We will continue this work in 2024.

² The FAIRR Initiative is a network of investors that focuses on ESG risks and opportunities in the global food sector.

Circular economy and resource efficiency

Link to the UN Sustainable Development Goals:

The world's natural resources are under increased pressure, and it is important for the climate, nature and the environment that resources are used far more efficiently, so that we reduce the need to extract new ones¹. Several of the companies in DNB's loan and investment portfolio are dependent on natural resources, which is why efficient use of such resources is important to us. Risks linked to loss of natural resources are an important part of our ESG assessments when we consider financing companies, and we generally want companies to work to promote resource efficiency. Through our

portfolio and dialogues with companies, we have an indirect impact on circular economy and resource efficiency, and we want to support and be a driving force for more circular business models. DNB wants to have a positive influence by placing expectations on our customers and the companies we invest in, in addition to developing products and services that support the transition to a circular economy.

In order to increase our competence on circular economy and share experiences across the financial sector, in 2023 we joined the circular finance coalition initiated by the Finance Sector Union of Norway, WWF (the World Wide Fund for Nature) and Circular Norway. The circular finance coalition is a collaborative arena where participants from the financial sector share experience and competence to develop circular products, services and tools that are adapted to new EU rules and legislation, as well as climate-related and environmental goals. Through the coalition we have discussed relevant issues and have had a dialogue with stakeholders such as banks and

What is a circular business model?

A circular business model is a form of business operations that shows consideration for the environment and natural resources. Instead of following the linear model that is based on extracting, using and discarding materials and products, a circular business model seeks to reduce waste and extend the life of materials and products, as well as to reuse and recycle them as much as possible. A circular business model can also involve offering services instead of products, such as rental, sharing or repair. The goal of a circular business model is to create value for customers, the business and society, while reducing the environmental impact and saving resources.

Recycling

This is a broad term for processes that make it possible to reuse products and materials, to prevent them from ending up as waste.

Upcycling

This is a term used to describe the process in which waste materials are transformed into new materials or products of higher quality or value than the original material.

¹ From the website of the Norwegian Environment Agency (2023): Circular economy (in Norwegian only).

Our governing documents for our work with circular economy and resource efficiency

- **DNB's Code of Conduct:** DNB demonstrates corporate responsibility and contributes to sustainable economic, social and environmental development in the areas and industries in which the Group operates. DNB's corporate responsibility must be reflected in everything DNB does, including investment and financing.
- **Group policy for sustainability:** DNB undertakes to show consideration for the environment and to conduct operations that have the smallest possible negative impact possible on the external environment. In addition, we will work to promote taking greater environmental responsibility and encourage the development and distribution of environmentally friendly and sustainable technology and solutions.
- **Group instructions for sustainability in DNB's credit activities:** The instructions describe what we require and expect of customers we grant credit or other facilitated financing to. In DNB, we do not grant credit to customers who contribute to serious damage to the environment, and we have committed to showing consideration for climate and the environment in all of our credit activities.
- **Group instructions for responsible investments:** The instructions are intended to ensure that DNB does not contribute to serious damage to the environment and that an assessment of risks and opportunities is integrated into the management of the investments.

companies. We have included the lessons learned from our participation in our internal work with circularity.

Our work with circular economy is based on, among other things, the Initiative for Responsible Ship Recycling (RSRS), through which DNB is committed to integrating the principles of responsible scrapping and recycling of ships in our loan agreements and other terms and conditions. Through our work with the Principles for Responsible Banking (PRB) from the United Nations Environment Program Finance Initiative (UNEP FI), we have also identified circular economy as one of the main areas in which DNB is particularly able to exercise influence through its loan portfolio..

What was done in 2023?

Lending to corporate customers

When considering loans to corporate customers, we assess different aspects of the companies' handling of recycling and waste reduction. We are in dialogue with customers in relevant sectors relating to this topic in order to contribute to knowledge sharing and to encourage customers to increase or initiate necessary activities. In October 2023, DNB's green product framework was updated with defined circular activities that can be financed through green loans to support such measures.

In accordance with our RSRS commitment and our own objective to include a clause on responsible recycling of ships in loan agreements, in 2023, all new and refinanced loan agreements with collateral in ships, and all new loans with collateral in offshore ships and rigs contained a clause on responsible recycling. The inclusion of a recycling clause has been standard practice since 2018, so most loan agreements in shipping today contain such a clause. In 2025, the Hong Kong Convention (the International Convention on the Safe and Environmentally Sound Recycling of Ships) will enter into force with global effect.

In 2023, DNB became a project partner in a consortium led by Nordic Circles², which promotes the upcycling of metal from the maritime industry to environmentally friendly building materials. The project will lead the way, as an example of how circularity can function in practice by showing the potential for value creation, reducing greenhouse gas emissions and developing new scalable production technology. DNB will contribute resources and competence for further upscaling and industrialisation..

Investments

In our capital management company DNB Asset Management (DAM), circularity was a recurring topic in active ownership throughout 2023. It is still early days for this topic, but we expect it to become increasingly important. In company dialogues, we attempt to challenge companies to work to achieve more circular production processes, not only because it is good for the environment, but also because circular business models increase profitability. DAM is well positioned to benefit from the transition towards increased circularity across sectors, given our broad investment

universe. The Nordic region has been identified as a region in which the potential in the circular economy has been underdeveloped. DAM's Nordic investment focus in several of our mutual funds therefore makes us particularly well positioned to exploit the opportunities for value creation in this area. This is particularly relevant in industrial companies, the construction industry and companies in the consumer sector, for example, textiles and packaging. We work actively through dialogue to influence companies to integrate the principles for a circular economy in their operations, so that relevant industries can help protect assets in the form of energy, labour and materials. This will reduce the environmental impact through high resource utilisation and less waste.

The way forward

Going forward, we will continue our work to contribute to more circular value chains among our corporate customers. A circular economy will be an important topic in our customer dialogue, and we will continue to work to increase competence among our employees. We have begun work to establish further goals for how we can have a positive impact on the circular economy through our loan portfolio.

DAM will continue the work of influencing companies towards increased circularity across industries. We will use our influential ability as a shareholder to explore the opportunities for improved resource utilisation, especially among Norwegian companies. Circularity is a key topic in the dialogue to promote more profitable, effective and sustainable companies.

2 Nordic Circles is a company that has developed a completely new value chain for the upcycling of maritime metal from ships and oil rigs to standardised construction materials like beams, columns, sheet piling and pipe piles.

Financing, advisory services and investment

The transition to a low-emission society requires major changes, and investment is required both in existing sectors to reduce emissions, and in the development of new industries and technologies that can drive the transition forwards. As a financial institution, we are able to operate and support this transition through financing, advisory services and investment relating to products and services linked to sustainable activities. DNB has set targets to:

- Finance and facilitate sustainable activities¹ worth NOK 1 500 billion by 2030
- Increase assets under management (AUM) in mutual funds with a sustainability profile to NOK 200 billion by 2025
- Ensure that 50 per cent of net flows of total assets goes to mutual funds with a sustainability profile in 2025

Through these targets, DNB can be a driving force for the sustainable transition and contribute to increasing the Group's positive impact on climate and environment, social conditions and corporate governance. We will help our customers to move in a more sustainable direction, in addition to reducing emissions by offering financial products and services that promote sustainable activities, solutions, investments and innovation.

What was done in 2023?

Financing and facilitation

On our way to the NOK 1 500 billion target

During 2023, we financed and facilitated sustainable activities worth a total of NOK 171 billion, well distributed between our various products and services. The criteria for sustainable activities are listed on page 81.

The volumes have been included in our sustainable finance portfolio since 1 January 2020, and count towards our goal of financing and facilitating sustainable activities worth NOK 1 500 billion by 2030. We have contributed a total of NOK 562 billion since 2020.

Compared with the figure for 2022, NOK 170 billion, we saw a marginal increase in the volumes in 2023. This was mainly driven by growth in the financing of renewable energy and environmentally friendly transport. We experienced a sharp decline in volumes in green loans for new buildings, where the market has been particularly difficult in Norway. However, financing of rehabilitation and energy efficiency measures in buildings has increased considerably.

1 These activities are not based on the definition or the classification system in the EU Taxonomy Regulation.

Further details of target attainment by product

Finance and facilitate sustainable activities – by product

NOK billion

- **Green guarantees:** We issued 13 green guarantees worth a total of NOK 3 billion in 2023, all of which were issued to companies in the renewables sector.
- **Sustainability-linked loans:** Volumes increased somewhat from the previous year, and for 2023 we reported a total of 39 transactions, with a share of DNB loans of NOK 31 billion, compared with 37 transactions and NOK 32 billion in volumes in 2022. Sustainability-linked loans remain in high demand, but we have experienced slower volume growth, partly due to higher expectations from the bank market when setting key performance indicators and targets. Creating a link between sustainability performance and loan margin can be a powerful tool for us as a bank when it comes to incentivising our customers to change their behaviour.
- **Green loans:** We registered a record number of green loan transactions in 2023, a total of 68, amounting to NOK 18 billion. The main reason for this development was our initiative to showcase smaller green loans for financing energy efficiency measures in buildings. The total volume was lower than last year, however, mainly

explained by the construction of new buildings in Norway almost coming to a halt. Green loans for new buildings have in the past accounted for a large share of total volumes (NOK 3 billion in 2023, compared with NOK 12 billion in 2022).

- **Financing of renewables:** After a quiet first half of the year, we saw a considerable development in renewable volumes during the year, which ended at NOK 24 billion, divided between 47 transactions. The fourth quarter was the best quarter on record for financing in this sector, with particularly strong contributions from North and South America.
- **Environmentally friendly transport:** We facilitated and financed environmentally friendly transport worth NOK 23 billion in 2023. Electric passenger cars and vans accounted for 95 per cent of the volume, while the remaining volume was distributed between electric buses, lorries, construction machinery and other electric vehicles as defined in DNB's Sustainable Product Framework. Overall, we are ahead of schedule in relation to our 2030 goal to finance environmentally friendly transport worth NOK 175 billion. To achieve our goal, we need to increase the proportion of zero-emission vehicles in the portfolio, something that is supported by the trend in the shift in the Nordic markets towards zero-emission vehicles. We will also actively pursue and prioritise agreements with partners whose product portfolios and business plans are in line with our net-zero ambition.
- **Sustainable bonds:** 2023 was another active year for DNB in the sustainable bond market. We kept our market-leading position in the Norwegian sustainable bond market, and in 2023, 19 per cent of the capital we helped customers raise in global bond markets had a sustainable label (including green, social and sustainability-linked bonds).
- **Debt, equity and mergers and acquisitions (M&A):** The rise in interest rates in 2023 translated into greater capital expenses for project development, affecting the overall funding available for renewable energy ventures. Consequently, the valuation of renewable energy assets experienced a dip, posing challenges for project developers and potential investors alike. The result was a slowdown in M&A activity.

Products and criteria for inclusion in the financing target²

| Product category | Product description | Inclusion criteria ² |
|--|---|---|
| Bonds | Green, social and sustainable bond transactions | Bonds aligned with the ICMA Green, Social and/or Sustainability Bond Principles with proceeds earmarked for investments with environmental and/or social benefits – with an external review confirming such alignment. |
| | Sustainability-linked bond transactions | Bonds aligned with the ICMA Sustainability-Linked Bond Principles where proceeds are for general corporate purposes, and where the financial characteristics of the transactions are linked to the issuer's realisation of sustainability performance targets – with an external review confirming such alignment. |
| | Bond transactions without an official sustainability label | Bonds financing renewable energy and related infrastructure, but without formal ICMA-aligned label. |
| Advisory services | Debt advisory mandates | Debt advisory mandates to facilitate and raise capital for i) renewable energy and related infrastructure, or ii) transactions aligned with the ICMA/LMA/LSTA ³ Green, Social, Sustainability and/or Sustainability-Linked Bond and Loan principles. |
| | Equity and M&A advisory mandates | Advisory mandates to facilitate listed/unlisted equity capital markets transactions, private placements or sales/purchases of project rights/shares, and M&A transactions, for companies primarily engaged in renewable energy and related infrastructure and services, or where the financing proceeds are specifically earmarked for such activities. |
| Loans | Green loans | Loans with proceeds earmarked for investments with environmental benefits aligned with DNB's Sustainable Product Framework or LMA's Green Loan Principles, and with a third-party assessment confirming such alignment. General corporate purpose loans may also qualify if a minimum of 90 per cent of the of recipient's expected income is derived from activities eligible under the Framework. |
| | Sustainability-linked loans (SLL) | Corporate loans aligned with the LMA/LSTA Sustainability-Linked Loan Principles where proceeds are for general corporate purposes and where the loan margin of the transaction is linked to the customer's realisation of sustainability performance targets. Only loans that are publicly branded and marketed as an SLL are eligible. Forward starts are not eligible. |
| | Loans without an official sustainability label | Loans issued to companies whose primary activity is renewable energy and/or related infrastructure, or where financing proceeds are specifically earmarked for such activities. |
| Guarantees | Green guarantees | Green guarantees for new projects/investments aligned with DNB's Sustainable Product Framework, or in renewable energy and related infrastructure. |
| Environmentally friendly transport | Financing provided by DNB Finans for passenger, transport and construction vehicles | Electric, hydrogen, or other passenger vehicles with zero direct emissions. Transport and construction vehicles with zero direct emissions. Vehicles used for the transport of fossil fuels are not included. |
| Further sustainable financing products can be included in the future in accordance with developments in the market and best practices. | | |

2 Transactions meeting the criteria may still be excluded from the calculation on the basis of an internal review process. The criteria may be extended to cover additional sustainable activities in the future.

3 ICMA: International Capital Market Association. LMA: Loan Market Association. LSTA: Loan Syndications and Trading Association.

Throughout the year we continued to expand our product offering, making sure our customers had access to relevant products and services for the investments needed in the transition to a low-carbon society. For example, we conducted a pilot project to showcase energy efficiency measures for buildings in the SME segment. We subsequently issued 33 green loans for energy efficiency measures.

Our Sustainable Product Framework, which lists activities and criteria for green financing, was also updated, and the update was carried out as a joint effort with DNB's business partner Sustainalytics. The new version is expanded in scope, and the structure, logic, and criteria have been harmonised more closely with the EU taxonomy. The Sustainable Product Framework has been published on dnb.no/sustainability-reports.

Investments

In DNB Asset Management (DAM), mutual funds with a sustainability profile make an important contribution to achieving the ambition of increasing the total AUM in mutual funds of this kind to NOK 200 billion in 2025. We have also set a target that 50 per cent of net flows of total assets should be to mutual funds with a sustainability profile in 2025. To succeed in this, we must change how we work with mutual fund mandates as well as increase customers' interest in funds with a higher degree of sustainability integration.

Finance and facilitate sustainable activities

NOK billion (accumulated)

In 2023 we made several changes, and we progressed significantly towards our target compared with 2022:

- In early 2023, the equity fund DNB Global Emerging Markets changed its name to DNB Fund Brighter Future, with defined focus areas linked to the UN Sustainable Development Goals.
- We completed the fourth annual ESG integration survey for Norwegian bond issuers and increased our focus on collecting companies' sustainability data to meet more stringent reporting requirements, and on using the data as a basis for investment decisions that can contribute to the climate transition. This data is integrated into our internal ESG data that our portfolio managers use to make informed investment decisions.
- For funds registered in Luxembourg, we made changes to prospectuses to meet the new EU disclosure requirement.
- We reclassified the majority of Norwegian and Nordic fixed-income portfolios to mutual funds with a sustainability profile, with a higher degree of ESG integration and low carbon criteria. This represents a significant increase in AUM in this product category⁴.

At year-end 2023, total assets in mutual funds with a sustainability profile amounted to NOK 124.3 billion, out of the NOK 919 billion managed by DAM. As for the target that half of the net flow of total assets should go to mutual funds with a sustainability profile in 2025, there was a positive development in 2023 compared with

Assets under management in mutual funds with a sustainability profile

NOK billion

⁴ The mutual funds have been reclassified using SFDR methodology, without being certified by a statutory auditor.

Other products

DNB offers a wide range of green loan products⁴, including green mortgages, green home equity credit lines and green construction loans, with price incentives for homes with an Energy Performance Certificate Rating (EPC) of A or B. In 2023, we prioritised developing more green loan products to ensure good financing schemes for a wider range of customers. This includes green fixed-rate loans, green holiday home loans and environmental loans. Environmental loans are an important tool for helping customers finance energy-saving measures in their own homes. We have continued to offer particularly favourable terms for all our green financing products to help customers make more climate-friendly choices. In 2023, we experienced a positive development in these products and can report growth from NOK 4.9 billion in 2022 to NOK 17.4 billion in 2023 in green mortgages.

ESG share analysis

In 2023, we continued to build on our first place in Prospera's customer survey, which focused on how ESG was integrated into the share analysis in the Norwegian market in 2022 and 2021. Concrete contributions included drawing up several ESG-related sectoral reports that were distributed to a broad customer base, and making ESG-related information more specific in the share analyses. In addition, there was increased dialogue with the Nordic and European customer base, with an increase in queries relating to how ESG factors influence Nordic companies in the long term. We expect to develop our product offering by using ESG data for company analysis to an increasing extent, as ESG reporting is expanded and customers expect more information on ESG-related risks and opportunities.

Projects financed in accordance with the Equator Principles

The Equator Principles are an international risk framework that has been developed through global cooperation between banks. The framework ensures that issues relating to environmental and social conditions are analysed and assessed and, as far as possible, minimised when we provide financing for specific purposes through project finance and project-related company loans. In 2023, we financed 11 projects in accordance with the Equator Principles, and they are now being built in Norway, Poland, Chile, Australia and the US. The projects were in sectors such as solar energy, wind power, battery storage and infrastructure (roads). We also financed our first desalination project (production of fresh water from salt water), and here DNB Markets provided project finance advisory services.

2022. The positive development was supported by the reclassification of many of the fixed income funds to the platform of low-carbon products. One example of this is DNB's Norwegian 'investment grade' fixed-income fund, which amounts to just under NOK 100 billion, which already met the criteria in the existing sustainability profile 'low carbon', and which was therefore reclassified to be covered by mutual funds with a sustainability profile. The net flow for DAM as a whole was negative in

2023, while there were weak positive net flows to mutual funds with a sustainability profile.

In DAM, sustainability is not restricted solely to our mutual funds with a sustainability profile, as all funds must adhere to the DNB Group instructions for responsible investments. However, for our mutual funds with a sustainability profile, we are working more explicitly to collect and analyse data on the potential adverse impacts

⁵ The definition of green loans is based on the EU Taxonomy Regulation's definition of green assets.

of DAM's investments on environmental and social factors, so that these impacts can be reduced across all portfolios. Furthermore, we are practising positive selection of companies with a sustainability-aligned business model in some funds with higher degrees of ESG integration. The funds classified under Articles 8 and 9 of the SFDR (Sustainable Finance Disclosure Regulation)⁶ will be examined carefully, and companies will be chosen through a process of positive selection based on defined environmental and social indicators for active funds, or based on an index with the same requirements for passive funds. The share of DAM's total AUM that are subject to positive screening and selection is 12.5 per cent.

The way forward

Financing and facilitation

In 2023, as a part of the work on DNB's transition plan, we developed and conducted a product assessment of all our financing products with a sustainability profile that aim to finance climate solutions, emissions reductions or transition activities. The climate transition product assessment process covered a number of factors to evaluate how products contribute to real-economy decarbonisation and DNB's net zero objectives, as well as to effective deployment. More details on the assessment can be found in DNB's transition plan on dnb.no/sustainability-reports. Going forward, we will continue our efforts to scale up our sustainable finance volume, while upholding the integrity of the products in terms of their real-economy impact and transparency. We launched the first programme for sustainability-linked supply chain financing in the Nordics in 2023, and we will continue to develop this programme in 2024, in addition to green guarantees. We are also exploring new products and advisory services to support our customers on their sustainability journeys, and are preparing to launch transition loans in the first half of 2024.

For our other products not included in the financing target, we expect increased demand for fixed-income, currencies and commodities products for managing risk in renewable energy and investments in green projects and industry. We expect to see increasing interest in power swaps for managing the power risk in a market that remains volatile, and in emission allowances for the marine industry. Furthermore, we have included sustainability advisory services in Initial Public Offering (IPO) transactions, both within share analysis and transaction execution. To proactively help our customers to meet new expectations and make the transition to a low-carbon economy, our advisory services will be of increasing importance in the time ahead.

Investments

The goals we have set in the transition plan mean that we must develop new products, adapt mutual funds so that they can be reclassified as funds with a sustainability profile, and continue the integration of sustainability in the products we offer today. It is equally important that the customers are part of the ambition to reach these goals. They are the ones who need to select mutual funds with a sustainability profile if we are to achieve the goals in the transition plan. Through MiFID II (Markets in Financial Instruments Directive), we already ask our customers about their sustainability preferences, but we must also ensure that mutual funds with a sustainability profile are the most competitive and attractive funds for our customers.

6 The EU legislation on disclosure of how sustainability advisory is handled by financial advisers. The SFDR has been implemented in Norwegian law, and is called *Offentlighetsforordningen* in Norwegian.

The EU taxonomy for sustainable activities

Reporting principles

The EU taxonomy is a classification system for environmentally sustainable economic activities. The purpose of the taxonomy is to steer capital towards environmentally sustainable investments. The classification is based on six environmental objectives, where the last four objectives (known as Taxo4) were not implemented in Norwegian law at year-end 2023. DNB is working towards reporting on the last four objectives from the reporting year 2024. As a credit institution, DNB is required to base its key disclosures under the taxonomy on information reported by customers and counterparties. As Norwegian non-financial companies were not required to fully report taxonomy information until the financial year 2023, DNB has experienced challenges relating to data availability and quality. The EU taxonomy is constantly evolving, and reporting for the financial year 2023 is based on information, interpretation and assumptions at the time of disclosure.

DNB's taxonomy reporting for 2023 is consolidated for DNB Bank ASA and its major subsidiaries, excluding DNB Livsforsikring AS, in accordance with the prudential scope prescribed by the Capital Requirements Regulation (EU 575/2013). The following disclosures are made in accordance with Article 8 of the EU taxonomy, as supplemented by Commission Delegated Regulation 2021/2178, annex V and VI.

Taxonomy reporting templates

A summary of KPIs for the taxonomy reporting can be seen below. As the reporting requirements were implemented from 1 January 2023, comparable figures for 2022 are not available. The full reporting templates are published on ir.dnb.no and dnb.no/sustainability-reports.

Environmental objectives

1. Climate change mitigation
2. Climate change adaptation
3. Sustainable use and protection of water and marine resources
4. Transition to a circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

In DNB, we contribute to channelling capital into sustainable activities through our offering of sustainable products. The framework for sustainable products is updated regularly to ensure that our criteria for green loans are generally harmonised with developments in best market practice and the conditions and application of the taxonomy. Read more about our framework for sustainable products on dnb.no/sustainability-reports.

Summary of KPIs to be disclosed by credit institutions under Article 8 of the EU Taxonomy Regulation

As at 31 December 2023

| | | Total environmentally sustainable assets (NOK million) | KPI ¹ (%) | KPI ² (%) | % coverage (over total assets) ³ | % of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V) | % of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V) |
|----------|-------------------------------|--|----------------------|----------------------|---|---|--|
| Main KPI | Green asset ratio (GAR) stock | 137 673 | n/a | n/a | 83.5 | 35.6 | 16.5 |

| | | Total environmentally sustainable activities (NOK million) | KPI (%) | KPI (%) | % coverage (over total assets) | % of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V) | % of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V) |
|-----------------|--|--|---------|---------|--------------------------------|---|--|
| Additional KPIs | GAR (flow) | 33 806 | n/a | n/a | 43.8 | 17.3 | 56.2 |
| | Trading book ⁴ | n/a | n/a | n/a | | | |
| | Financial guarantees | 0 | n/a | n/a | | | |
| | Assets under management | 4 110 | 7.2 | 10.7 | | | |
| | Commission and fee income ⁵ | n/a | n/a | n/a | | | |

1 Based on the turnover KPI of the counterparty.

2 Based on the Capex KPI of the counterparty, except for lending activities where the general lending turnover KPI is used.

3 Percentage of assets covered by the KPI as a share of banks' total assets.

4 For credit institutions that do not meet the conditions of Article 94(1) of Article 325 a(1) of the Capital Requirements Regulation.

5 Commission and fee income from services other than lending and AuM.

Assumptions and data limitations in the reporting for 2023

| Reporting data | Taxonomy-eligible activities | Taxonomy-aligned activities | Limitations |
|---|---|--|--|
| Non-financial undertakings | Exposures to loans and advances for non-financial undertakings is based on gross carrying amount in line with the FINREP reporting. The eligibility test is based on NACE codes. | No taxonomy-aligned activities had been reported by DNB's Norwegian counterparties at year-end 2023. | Due to lack of data available, the undertakings' activities have not been screened in line with the taxonomy. The work on implementing alignment testing and verification for the undertakings is under development (in Norway and within the EEA). |
| Households – of which loans collateralised by residential immovable property | <p>Eligibility is reported based on gross carrying amount. The portfolio of loans collateralised by residential immovable properties is recognised as eligible in its entirety.</p> <p>Unsecured credit/consumer finance are excluded from the total taxonomy-eligible activities for households.</p> | <p>Taxonomy-aligned activities are reported based on building code and year of construction. Properties that are among the top 15% most energy-efficient constructed before 2012, and between 2012 and 2020, are included. For properties constructed in or after 2021, the top 10% according to Net Zero Energy Buildings (NZEB) are included.</p> <p>If the year of construction was before 2012, properties with EPC-label A and B are classified as aligned. If the year of construction was between 2012 and 2020, all properties are classified as aligned if they comply with building code TEK10 and TEK17. For properties constructed in or after 2021, building code TEK17 and EPC-label A are used as verification for taxonomy alignment. Properties for which the year of construction is unknown are excluded, regardless of ECP-label.</p> <p>Our exposure to personal customers and public authorities is not required to meet the criteria set out in the EU taxonomy's Article 18 on compliance with minimum safeguards.</p> | <p>For collateral in immovable property, the latest available EPC label is used.</p> <p>The international portfolio is not included in the reporting due to lack of EPC label. We are working to increase the data quality of our international portfolio.</p> <p>The Norwegian Ministry of Finance, together with other relevant ministries, will assess which method can be used to identify which properties are among the top 15% and 30% in Norway in terms of energy efficiency.</p> |
| Households – of which motor vehicle loans | Taxonomy-eligible exposures include loans to zero-emission vehicles issued after 31 December 2020. | Motor vehicle loans are excluded in the reporting of taxonomy-aligned activities due to the technical screening criterion Do No Significant Harm (DNSH). | Data quality and availability is not sufficient for the assessment of compliance with the DNSH taxonomy screening criterion. |
| Local government financing | Exposures to local government are not reported as the purpose of the financing is unknown. | Exposures to local government are not reported as the purpose of the financing is unknown. | Local governments do not report taxonomy data. |
| Assets under management | | | Calculations for off-balance sheet exposures and assets under management are based on taxonomy data sourced from Bloomberg LP and the best available information at the time of reporting. |

| Reporting data | Taxonomy-eligible activities | Taxonomy-aligned activities | Limitations |
|------------------|------------------------------|-----------------------------|--|
| KPI for turnover | | | The KPI for turnover is only reported for assets under management due to a lack of data from customers and third parties. We are working to implement methods for calculating and verifying the taxonomy reporting of undertakings. |
| KPI for Capex | | | The KPI for Capex is only reported for assets under management due to a lack of data from customers and third parties. We are working to implement methods for calculating and verifying the taxonomy reporting of undertakings. |
| Taxo4 | Not reported | Not reported | We are working on implementing the final environmental objectives which were adopted in the EU in 2023 and implemented in 2024. |
| KPI for GAR flow | | | Flow is reported as new loans and advances issued in 2023. The gross carrying amount is calculated at the end of the first month after issuance. We continue to work on developing and implementing logics for the flow calculation. |

Social conditions

Social conditions include a number of physical and non-physical factors that affect our employees, customers and suppliers, and society as a whole. Some of the factors that can be linked to this topic are: health and quality of life, equal access to resources and benefits, inclusive social and working conditions, participation, sense of belonging and security.

For DNB, the following topics have been identified as material under Social conditions:

- Human rights
- Diversity and inclusion

Human rights

Link to the UN Sustainable Development Goals:

DNB respects the human rights of all individuals and groups that may be affected by our business operations. Human rights are fundamental rights that apply to all people all over the world. Fundamental human rights are the rights that are defined in the internationally recognised standards for human rights that are set out in, among other documents, the UN International Covenant on Economic, Social and Cultural Rights of 1966, the UN International Covenant on Civil and Political Rights of 1966 and the ILO core conventions on fundamental principles and rights at work.

Through conventions, norms and standards, we have committed to respecting human rights. The UN Guiding Principles on Business and Human Rights (UN Guiding Principles), the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (the OECD Guidelines) and the 10 principles of the UN Global Compact are key to our work with human rights and labour rights. These commitments are based on our Group policy for sustainability, DNB's Code of Conduct for business partners and DNB's Code of Conduct, in addition to other Group instructions and personnel-related guidelines, processes and routines. Moreover, we have undertaken to comply with the Equator Principles, which clarify our responsibility to respect fundamental human rights in connection with project financing. Human rights were defined as a material topic in 2023, and in 2024, we will work with ambitions and goals relating to the topic.

Since 2022, the business sector's responsibility for human rights and labour rights has been regulated through the Norwegian Transparency Act¹. Basic human rights and decent working conditions must be at the

heart of all of our business operations, both as an employer, as a supplier of banking and financial services, and as a buyer of goods and services, as well as in connection with our lending and investment activities. To read more about how we work with human rights, and to see our annual report under the Norwegian Transparency Act, visit dnb.no/sustainability-reports.

Through our supply chain and our credit and investment portfolios, we are exposed to sectors and countries with an increased risk of human rights violations, and through these we are therefore exposed to risk of direct or indirect human rights violations. Our internal assessment processes relating to environmental, social and governance (ESG) factors are integrated into routines and procedures to enable us to detect the risk. We have made it possible for our suppliers, business partners and other stakeholders to report negative incidents through the whistleblowing channel on our website dnb.no. Throughout the year, we also engage with internal and external stakeholders, discussing various topics relating to human rights. Insights from these meetings are incorporated into our work in this area.

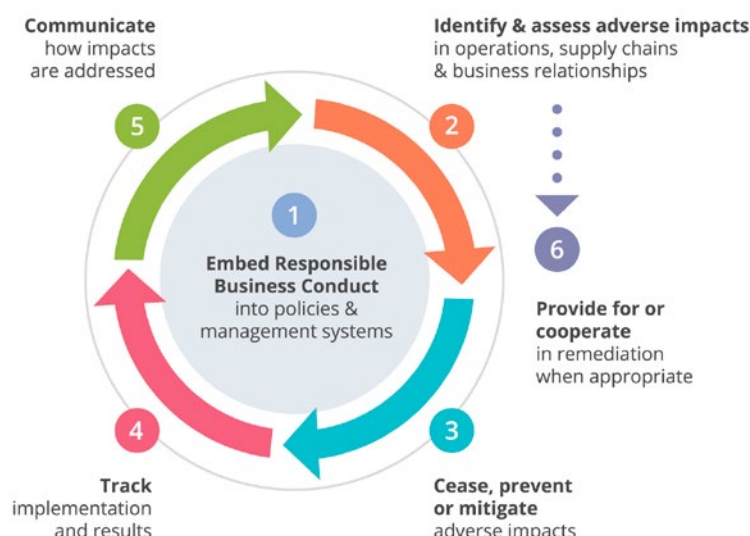

Due diligence is a key part of our work with human rights. Due diligence consists of processes implemented to identify, prevent, reduce and document our handling of any negative impacts on fundamental human rights and decent working conditions. The UN Guiding Principles and the OECD Guidelines state that responsibility for preventing and handling negative consequences for human rights includes both own operations and impact that can be directly linked to the company's activities, products and services. In DNB, due diligence must be performed within our own operations, among our business partners, in the supply chain, and in our lending and investment activities, and it must be performed in accordance with the OECD Guidelines. See the figure below.

¹ Act relating to enterprises' transparency and work on fundamental human rights and decent working conditions (the Norwegian Transparency Act, in Norwegian only)

Our governing documents for our work with human rights

- **DNB's Code of Conduct:** In accordance with our Code of Conduct, DNB demonstrates corporate responsibility and contributes to sustainable economic, social and environmental development in the areas and industries in which the Group operates. DNB's corporate responsibility must be reflected in everything DNB does, including the Group's investment and financing activities.
 - **Group policy for sustainability:** DNB will map its own value chain in order to reveal the risk of actual and potential violations of human rights and labour rights that DNB may cause, contribute to or be directly associated with in its role as employer, investor, lender or purchaser.
 - **Group instructions for sustainability in DNB's credit activities:** In the instructions, we describe what we demand and expect from customers we provide credit to or for whom we facilitate capital market-based financing, in relation to human rights. The requirements and expectations are part of our ESG risk assessment process. All of DNB's customers must, within their sphere of influence, fully support and respect internationally recognised human rights and ensure that they are not involved in violations of these. Furthermore, customers must respect the eight fundamental or core conventions laid down by the ILO (International Labour Organisation). Customers must comply with applicable laws and regulations in their home country/country of domicile, in addition to applicable laws and regulations in countries where they conduct business operations. They must also act in accordance with relevant international conventions and guidelines adopted by international organisations, such as the UN and the OECD.
 - **Group instructions for responsible investments:** The instructions are intended to ensure that DNB does not contribute to the violation of human rights or labour rights, corruption, serious damage to the environment or other actions that could be regarded as unethical. They are also meant to ensure that assessments of risks and opportunities related to ESG (Environment, Social and Governance) factors are integrated in the investment management.
 - **DNB's Code of Conduct for business partners:** The Code of Conduct is based on international frameworks, and contains clear requirements in the areas of human rights and workers' rights, environmental management and ethical business conduct in own operations. It also specifies that business partners are under an obligation to comply with all legislation associated with decent working conditions and human rights in their business operations, and that they must communicate similar principles in their own supply chain.
 - **Group policy for procurement and outsourcing:** Our Group policy is intended to ensure that DNB does business with suppliers in such a way that the Group's requirements for responsible business conduct are met, and that the products and services used in DNB's operations are produced and delivered in a sustainable manner, and do not contribute to violations of human rights or of decent working conditions.
 - **Instructions for procurement and sourcing processes:** The instructions are intended to ensure that our procurement processes and purchasing do not contribute to violations of human rights or of decent working conditions. The requirements relating to responsible business conduct for suppliers must be followed up during the agreement period through dialogue, analyses and audits. As part of its work with suppliers, DNB must conduct risk-based due diligence, in line with applicable legislation, the UN Guiding Principles and the OECD Guidelines. Any breaches of these principles and guidelines that are identified must be assessed closely, and measures must be taken. Suppliers must comply with applicable legislation in the countries in which they operate.
-

The OECD model for due diligence

DNB's work relating to human rights in own operations is described in Diversity and inclusion on page 97.

What was done in 2023?

Lending to corporate customers

In 2023, we continued to see an interest in human rights and labour rights among our customers. A strong driver of this has been the Transparency Act.

In our ESG risk assessment tool², specific questions relating to human rights helped detect risks, gaps and non-compliance among some customers. These were followed up through customer dialogue, but were also the subject of discussion in specialist environments and credit committees.

In 2023, DNB held a dedicated conference on the importance of respecting human rights in the transition to a low-emission society. A sustainable shift requires that climate, the environment and human rights issues are seen in context, and that the transition is fair. The conference invited customers and other representatives of civil society to a dialogue on practical challenges and dilemmas relating to human rights in the business sector, and had contributors from the Rafto Foundation for Human Rights, the OECD's National Contact Point for Responsible Business Conduct Norway, a supplier of an

information system, and customers in renewable energy and sea-based transport.

To increase competence on human rights and labour rights, as well as the Transparency Act among our account officers, we continued to put these topics on the agenda in our credit seminars. For some customers, we have also increased the knowledge of the Transparency Act at management level, at the request of the customers. Furthermore, DNB was an active participant in FUTURE-PROOF. This is a network of companies in Western Norway that was established by the Bergen Chamber of Commerce and Industry and the Rafto Foundation, where companies meet to raise their competence and share issues, dilemmas and best practices relating to human rights. DNB has benefited considerably from this in the work of integrating respect for human rights in its credit activities. In 2023, we shared a DNB-related case with the other members of the FUTURE-PROOF network.

Investments

We manage significant assets on behalf of our customers through the management of mutual funds and active portfolios in DNB Asset Management (DAM), and through the Group's equity investments. Responsible and sustainable investment means taking ESG factors into consideration in investment management and contributing to sustainable development. Taking sustainability into account in investment decisions gives

² Read more about our ESG risk assessment tool under Management and follow-up of the sustainability ambitions on page 51.

portfolio managers better information on which to base these decisions. It also reduces risk and helps highlight the many opportunities associated with sustainable investment.

All of the DNB Group's investment activities must be in line with the Group instructions on responsible investments. The instructions are meant to ensure that in DNB, we do not contribute to violations of human rights or labour rights, corruption, serious damage to the environment, or other actions that could be regarded as unethical. Companies that act contrary to DNB's Group instructions on responsible investments and over time show no willingness to rectify the situation, may be excluded from the Group's investment portfolios. The purpose of the exclusions is to ensure that that we do not contribute to human rights violations, corruption, serious damage to the environment, or other actions which may be perceived to be unethical or not in line with DNB's guidelines. An updated list of company exclusions is available on our website dnbam.com/en/responsible-investments/guidelines-and-exclusions.

DAM has developed an expectation document for companies on human rights. Our expectations call for a high level of transparency around how companies identify, assess, and manage their exposure to human rights risks and opportunities – both for the company and its supply chain. A high level of transparency ensures that DAM's asset managers have the opportunity to utilise the information in their company analyses and as input to investment decision-making.

Activities in the supply chains of companies are no longer considered separate activities, but rather as integral to understanding the impact companies and their customers are having on the locations where the companies have operations, as well as the impact they are having on people. 2023 was the first year of reporting in line with the Transparency Act, which provided a unique insight into the due diligence practices of Norwegian companies relating to their supply chains and business partners. DAM reported in line with this legislation in its 'Annual Report 2022 Responsible Investments'. Moreover, DAM engaged with several Norwegian companies in making preparations for complying with this new legislation. In the EU, the European Parliament voted in favour of the Corporate Sustainability Due Diligence Directive (CSDDD). The proposed Directive is a significant step in the direction of strengthening the due diligence and corporate

responsibility of nearly 10 000 European companies. Furthermore, it will also require member states to adopt new legislation in national assemblies. Similar legislation already exists in France and Germany, and in Norway through the Transparency Act. DAM considers this development to be highly favourable, as increased transparency and reporting helps facilitate improved working conditions in global supply chains, and also provides a better foundation for sound risk assessments.

We have also seen a rising interest in and concern for human rights and for operations in markets with an elevated risk of human rights violations. Increasing geopolitical tensions have highlighted the importance of engaging with companies on their due diligence processes relating to human rights in connection with both direct and indirect exposure to high-risk areas. In 2023, DAM engaged with 119 companies on their work on human rights in both reactive and proactive dialogues. This took the form of both individual and collaborative dialogues with Norwegian and international investors as well as engagement partners.

Several companies were excluded from our investment universe due to violations of DNB's criteria relating to human rights set out in the Group instructions on responsible investments. Many of the human rights-related exclusions in 2023 were linked to activities or sale of equipment in Myanmar, a state sanctioned by the United Nations Security Council. Five companies were excluded due to ties to the state-owned oil company Myanma Oil and Gas Enterprise (MOGE), which operates three offshore gas fields in Myanmar. MOGE's continued operation of these fields secures significant income streams that can fund the military's activities and human rights violations in Myanmar. Two further companies were excluded on the criterion of sale of weapons to states sanctioned by the UN Security Council, through the sale of weapons to the military junta in Myanmar.

Purchasing

In 2023, DNB in Norway bought goods and services worth NOK 11.1 billion, and 124 of 4 600 suppliers represented 80 per cent of the purchasing costs. The main purchasing categories are development and operation of IT solutions, marketing and consulting services, and goods and services relating to real estate and office equipment. Among our suppliers, 87 per cent come from the following regions and countries: Nordics (73 per cent), UK (8 per cent) and US (6 per cent).

It is important that we choose suppliers that operate in accordance with our expectations and requirements, including relating to human rights. Having good suppliers makes DNB better, and it is our goal to be a customer that also contributes to their improvement.

The risk of violations of human rights or of decent working conditions is generally low for most of the services and products we buy. At the same time, it is important to point out that it is not possible to eliminate all risk, and that we therefore work continuously to assess risk and monitor suppliers more closely in order to have better control.

Risk assessment

All suppliers that we enter into an agreement with undergo a risk assessment using DNB's Third-Party Risk Management (TPRM) system before signing the contract. The agreements are followed up and subjected to regular risk assessments during the contract period. One of the risk factors considered in supplier assessments is sustainability, including compliance with human rights. The system provides an overview of all of DNB's direct suppliers, as well as which of these are in industries and/or countries that entail a higher risk of human rights violations.

For suppliers that have higher inherent ESG-related risk, a more thorough assessment must be conducted prior to approval. This can be a matter of obtaining further information from the supplier concerned or external sources, or of making the decision to enter into a contract at a higher management level in DNB. For risk relating to social factors, suppliers must, among other things, answer concrete questions relating to policies, due diligence and how they identify, prioritise and reduce the risk of human rights violations in their own business operations. The system is continuously updated and improved to include more questions relating to sustainability, industry risk and opportunities for obtaining information about other links in the supply chain over and above our direct contracting party when this is considered more material. Among the 565 supplier assessments that were completed in 2023, 17 per cent were assessed as entailing higher inherent risk. These underwent a more thorough assessment before the final decision was made.

Suppliers with higher inherent risk of human rights violations are reassessed annually, and companies with more than moderate risk are followed up by the contract manager through different measures.

Further examinations, risk reduction and improvement measures in the supply chain

To assess which areas have the greatest risk of violations of human rights or decent working conditions, we have mapped the goods and services we purchase, as well as the countries from which they are sourced or delivered. Furthermore, assessments are made of where in the supply chain the risk is considered to be highest. Finally, regardless of country and sector, an assessment is made as to whether DNB may have a greater responsibility for any negative impact.

As we have many suppliers, we take a risk-based approach when deciding which ones to focus on. These decisions are made based on the risk assessment performed upon entry into a contract, which identifies where the risk of violations of human rights and decent working conditions is greatest, combined with proportionality, that is, the context and the supplier's connections with DNB. Our ability to make a positive impact is linked to the scope of the agreement, the supplier's activity and the supplier's strategic importance.

If we discover that DNB has directly caused or contributed to violations of fundamental human rights or decent working conditions in our supply chain or through any of our business partners, we will implement measures or exercise our influential power, to ensure that those responsible for the violations remedy the situation. Any violations will be documented in accordance with internal processes.

Standard and thematic requirements

We require specifically that DNB's Code of Conduct for business partners is included as an appendix in supplier contracts, and that our suppliers ensure that this requirement also applies throughout their value chain. In 2023, 89 per cent of the suppliers that were registered in DNB's contract database had committed to complying with the guidelines. This represents an 84 per cent increase from 2022. Our goal is for the document to be part of all contracts, but in some cases, for example, contracts with large international companies with many standardised customer relationships, we are unable to achieve this. We then consider whether it is acceptable to make an exception, and how the topic can best be covered in the contract, for example through the inclusion of the supplier's own ethical guidelines.

Sustainability analysis

We use the EcoVadis³ platform to assess suppliers that are deemed to entail a higher risk and for our more strategic suppliers. The result the supplier achieves in EcoVadis gives us good insight into what we should follow up with the supplier in relation to sustainability work, and the supplier's score is used actively as an evaluation criterion. The tool enables us to communicate directly with suppliers in the platform.

In 2023, we worked actively to bring several large suppliers into EcoVadis, and succeeded at this. At the end of 2023, suppliers representing 74 per cent of DNB's strategic supplier costs had a valid profile in EcoVadis, up from 63 per cent in 2022. The average score was 63.7 out of 100, up from 62 out of 100 in 2022, which is better than the average of 45 out of 100 on the platform in general. This was an improvement in both the proportion of supplier costs covered by EcoVadis and the average result, compared with the analysis from 2022.

The average score will always vary slightly, depending on which suppliers have a valid rating at the time of measurement. Furthermore, the score is often lower during the first assessment. In DNB, we encourage and expect our suppliers to achieve a score that shows that the company is working proactively and in a structured way with sustainability. The EcoVadis results are followed up through dialogue, thus allowing us to make a positive impact.

Audits and on-site inspections

Every year, we select a small number of suppliers for on-site inspections, either in the form of large-scale audits where we consider compliance with DNB's Code of Conduct for business partners, or in the form of more thematic inspections when these are specifically required, for example as part of the 'see-to-it' duty⁴ or an HSE inspection. In 2023, DNB, at Group level, carried out two on-site inspections of suppliers:

- A supplier that is used for delivery and recycling of electronic equipment, where the focus of the audit was compliance with DNB's Code of Conduct for business partners and relevant legislation such as the Transparency Act and environmental legislation. The audit did not detect any breaches of contract or violations of law. However, some risk factors were identified, and this led to a process with the supplier to consider various improvement measures, including measures relating to better management and follow-up of their supply chain.
- One of our largest IT partners, where the focus of the audit was compliance with DNB's Code of Conduct for business partners and relevant legislation such as the Transparency Act, as well as how the supplier works to promote increased diversity and equality. The audit did not reveal any breach of contract or violations of law, but several risks were identified. This led to a process with the supplier to consider various improvement measures in order to be able to close the audit.

³ EcoVadis: Shared platform for the assessment of companies' work with sustainability, see www.ecovadis.com

⁴ The 'see-to-it' duty: A statutory obligation to check that the pay and working conditions of a company's subcontractors are in line with applicable application regulations. See <https://www.arbeidstilsynet.no/regelverk/forskrifter/forskrift-om-informasjons-og-paseplikt-mv/2/6/> (in Norwegian only).

After an audit has been completed, we engage in a close dialogue with the supplier, to make sure that any deviations and suggested improvements are handled in a satisfactory manner. We find that the dialogue we have with our suppliers after audits is good, and that audits are a valuable tool for familiarising ourselves with the supplier's work and for enabling us to work together and achieve improvements and learning.

We also conducted six 'see-to-it' duty examinations of our partners in hotel and cafeteria services in 2023. No violations of pay or working conditions were detected during our examinations.

The way forward

Lending to corporate customers

In DNB, we will keep up the work of promoting respect for human rights in our credit activities. We will further improve our ESG risk assessment tool and establish better support for detecting risk in our customers' value chains. One of our goals for 2024 will be to integrate an information source for ESG-related country risk analysis delivered by the Economist Intelligence Unit into our risk assessment tool. In light of greater demands for due diligence in rules and legislation, as well as expectations of transparency from society in general, we will also continue to develop our tools to monitor and report on action plans for customer due diligence. We will further remain a participant in the FUTURE-PROOF network, and will attempt to exercise influence for the network to expand from Western Norway to more Norwegian regions. Human rights and labour rights will remain a priority in our in-house competence development – in Norway and internationally.

Investments

Ensuring respect for human rights, including labour rights, will be an important topic in our engagements in 2024, as in previous years. Ensuring further integration of country risk assessments and due diligence in the supply chain will be a particular focus for 2024, as it was cemented as a key issue for both companies and legislators in 2023. Given growing regulatory pressure in Norway and other countries, it is expected that this will also be on the agenda in company dialogues, allowing DAM to advise and guide companies towards best practice. We will also seek to increase our participation in investor initiatives and monitor regulatory movements in the EU and other markets. PRI Advance, in particular, will be a key initiative to engage with further in 2024, as this is an area that did

not receive sufficient attention in the past year, due to limited capacity in the investor initiative collaborations.

Purchasing

We will continue to exercise influence by regularly discussing sustainability in our supplier relationships. This can take the form of a review of the supplier's sustainability work or an update of material topics in the supplier relationship, such as work with equality and diversity or the supplier's general work in connection with the Transparency Act and respect for human rights. We also chose the Transparency Act and the suppliers' work relating to human rights as topics in the two audits we conducted in 2023. The audits have given us valuable insight which will better enable us to implement good procedures for the supplier portfolio in general.

The work with responsible purchasing will continue in 2024. We will work continuously with internal training, improvement and compliance with current rules and legislation, as well as with optimisation of our risk system to ensure compliance with the Transparency Act in general, and respect for human rights in particular. We will also work to ensure that sustainable choices count more in our processes relating to the selection of suppliers, and we want to have a positive impact through our purchasing and supplier relationships.

Diversity and inclusion

As a large financial institution, we have the opportunity to promote diversity and inclusion in our workforce, among our suppliers, the customers we finance, and society in general.

Link to the UN Sustainable Development Goals:

that we follow relevant rules and legislation relating to diversity and inclusion, as well as the Norwegian Working Environment Act and the Norwegian Equality and Anti-Discrimination Act. We give an annual account of our equality and diversity work in accordance with the activity duty and the duty to issue a statement. The statement is available on dnb.no/sustainability-reports.

One of our sustainability ambitions is that we will be a driving force for diversity and inclusion. In recent years, we have put gender equality higher on the agenda both within DNB and through our products, services and procurements. We will continue this work in the time ahead, while seeking to boost our efforts to promote diversity and inclusion.

For us, diversity means everything that makes people and groups unique and different from each other. This can mean visible traits such as age, gender, ethnicity and functional ability, or invisible traits such as sexual orientation, gender identity, religion, competence, life experiences, personality and interests.

In DNB, inclusion covers initiatives and practices aimed at giving everyone the same opportunities to contribute to the organisation and to be themselves regardless of their background. Inclusion is key to realising the potential of diversity. Having a diverse and inclusive working environment pays off, and is in keeping with our ethical foundation.

As a financial services group, an important part of our inclusion work is to ensure that DNB contributes to greater financial inclusion and healthy finances for customers, including by offering responsible and innovative products and services.

Beyond complying with our governing documents (see the next page), we also work continuously to ensure

Our governing documents for our work with diversity and inclusion

- **DNB's Code of Conduct:** This framework reflects our values, forms the basis for our culture and is at the top of DNB's governing document hierarchy. At DNB, everyone is to be valued for their different qualities, recognised for their talent, and they should be able to be themselves. DNB does not accept any form of discrimination, whether this is on the basis of factors such as gender, age, ethnicity, religion or beliefs, disability, sexual orientation or political convictions. Moreover, DNB does not accept any form of harassment, including unwanted sexual attention. This applies in relation to customers, suppliers, colleagues and others.
 - **Group policy for sustainability:** DNB is committed to taking social responsibility, which entails striving for diversity among the Group's employees and ensuring that discrimination on the basis of factors such as ethnic origin, religion, sexual orientation, functional ability, age or gender does not occur. We support socially beneficial objectives and secure important social values in the areas and industry sectors in which the Group operates.
 - **DNB's governance principles:** Our governance principles are intended to help ensure that all employees have a common understanding of how we govern, lead and behave in DNB. We will be a driving force for diversity and inclusion through targeted and planned efforts in this area, while promoting equality among all employees and preventing discrimination. We will create a good working environment that ensures equal treatment and contributes at all times to conduct and a culture that are in line with DNB's Code of Conduct.
 - **DNB's Code of Conduct for business partners:** The purpose of the guidelines is to promote responsible business conduct and corporate responsibility in our value chain. They are based on international standards and conventions, including the OECD Guidelines for Multinational Enterprises on Responsible Conduct, the UN Global Compact and the ILO core conventions on fundamental principles and rights at work, as well as national legislation. DNB's ethical guidelines prohibit discrimination and emphasise respect for human rights. All employees are expected to be treated fairly and our business partners must work to promote gender balance, diversity and inclusion throughout their organisations. Business partners must implement DNB's requirements in their own operations, report on compliance, and cooperate with DNB in the event of a breach of the guidelines.
 - **Group instructions for attracting and employing new employees in DNB:** The Group instructions are intended to ensure that the processes are transparent and in line with applicable rules and legislation at any given time. Our selection processes will be professional and we will treat all applicants equally. We strive for diversity, we comply with national regulatory requirements, and we do not tolerate discrimination.
-

Diversity and inclusion in our own operations

We will promote a healthy and safe working environment that is free of discrimination and harassment, and we will safeguard employees' data protection, freedom of association and right to collective bargaining. DNB has collective agreements with a total of six trade unions. These help ensure proper working conditions in DNB and promote constructive dialogue between employers and employees on work-related issues.

DNB is committed to ensuring healthy and stimulating working conditions for all employees. This will be achieved through continuous and targeted HSE work based on mapping and risk assessments. To gain insight into employees' health and job satisfaction, we conduct quarterly employee surveys, and once a year this is extended to a larger mapping of the working environment. The results of the mapping are followed up in collaboration with HR and employees, as well as their representatives in the safety delegate service, and improvement measures are implemented when necessary.

DNB aims to be a workplace where everyone is treated with respect and where it is considered positive to speak up about unacceptable circumstances. All employees, hired temporary personnel and consultants are encouraged to speak up through our electronic whistleblowing channel, or to speak to their own manager, their manager's manager or the relevant specialist unit. They can also report unacceptable circumstances to the safety delegate service, employee representatives or HR. DNB's external, independent service for receiving reports can also be contacted. Employees at DNB have the right to submit anonymous notifications and can rest assured that their notification will be processed in a responsible and confidential manner. It is important that employees feel safe to report situations, and DNB will not tolerate any form of reprisals.

The systematic work with health, the environment and safety in DNB is handled by the central HR function. Incidents and accidents at work must be reported to the immediate manager, and the manager must register the incident. Any further follow-up and reporting to the public sector and private agencies will take place in collaboration between the employee, the manager and HR. Robberies, violence or threats are also considered accidents at work and must also be reported to the Group's security department.

All employees are protected from loss of income as a result of major life events, such as illness, parental leave or retirement. This protection consists of schemes that are offered in the various countries in which DNB operates, as well as corporate insurance schemes. DNB also offers four different options for employees who are identified as redundant in connection with restructuring: transfer to DNB's flexible workforce team, Flexforce, employment with Manpower with a salary guarantee, termination of employment with external career counselling, or termination of employment with severance pay.

As a major buyer of products and services, we have the opportunity to influence diversity and inclusion in our suppliers' operations. For service providers with long-term agreements or framework agreements with DNB, where labour is the main delivery, we require that they work systematically with diversity and inclusion in their own organisation. We also require that they have a gender balance target.

Diversity and inclusion is a recurring theme in our procurement processes with relevant suppliers. Our agreements include contractual key performance indicators (KPIs) linked to this, and we have follow-up meetings with suppliers at least once a year where we review developments and targets.

What was done in 2023?

In 2023, we worked to implement our strategy for diversity and inclusion that was drawn up in 2022. The strategy describes our priority diversity areas and associated levels of ambition. In the strategy, multicultural background has been selected as a new priority area, in addition to gender. For the strategy to succeed, inclusion is highlighted as an important tool, in addition to mobilisation of the organisation, coordination, management and monitoring, and coherent communication.

The ambition of having a good gender balance (40/60) at all management levels stands firm, and in 2023, we achieved this goal at two out of four management levels, see the graph below. At the end of 2023, the average proportion of women at management levels 1–4 was 38.8 per cent, compared with 38.3 per cent in 2022. The proportion of women on the Board of Directors and in the Group Management team was 60 per cent and 42 per cent, respectively.

Key figures regarding employee numbers¹

As at 31 December 2023

| | Women | Men | Total |
|--------------------------------|-------|-------|--------|
| Employees | 5 229 | 6 099 | 11 328 |
| Permanent employees | 5 207 | 6 085 | 11 292 |
| Temporary employees | 22 | 14 | 36 |
| Non-guaranteed hours employees | 0 | 0 | 0 |
| Full-time employees | 4 933 | 5 867 | 10 800 |
| Part-time employees | 296 | 232 | 528 |

| | Norway | International | Total |
|-----------|--------|---------------|--------|
| Employees | 9 870 | 1 458 | 11 328 |

| | Europe (incl. Norway) | Asia | North America and South America | Totalt |
|--------------------------------|--------------------------|------|---------------------------------------|--------|
| Employees | 11 123 | 36 | 169 | 11 328 |
| Permanent employees | 11 088 | 35 | 169 | 11 292 |
| Temporary employees | 35 | 1 | 0 | 36 |
| Non-guaranteed hours employees | 0 | 0 | 0 | 0 |
| Full-time employees | 10 595 | 36 | 169 | 10 800 |
| Part-time employees | 528 | 0 | 0 | 528 |

Gender balance at management levels 1–4

To achieve the goal of gender balance at all management levels, we are working systematically and purposefully to improve the gender balance in units in which the proportion of women is less than 40 per cent. We have introduced several measures to ensure gender balance and access to enough women with leadership talent:

- a minimum of 50 per cent female representation in in-house leadership development and talent programmes;
- a minimum of 40 per cent women candidates on succession planning lists;
- identification of the best qualified female and male candidates in recruitment processes for management positions before a final choice is made;
- diversity as one of the job assignment criteria in restructuring processes;
- a particular emphasis on achieving a better gender balance when changing the composition of management teams.

As in previous years, we celebrated International Women's Day and International Men's Day in 2023. We also continued our efforts from previous years in DNB's in-house ODA network.²

The Cultural Diversity Network continued its work by celebrating various cultural festivals. As part of the priority area in the strategy, we also showcased in-house role models with a multicultural background, and launched a mentor programme for immigrants, with a view to helping them into Norwegian working life. To inspire our multicultural employees to develop their careers further, we held seminars on diversity for management teams.

During the year, we continued to work on the topics of sexual orientation and gender identity, which included being the main sponsor of Oslo Pride in 2023. We were also the main sponsor of Bergen Pride, Regnbuedagene. We also established an LHBT+ network in Bergen, as well as network contacts in Trondheim, Riga, London and New York. To increase our competence in-house, we held talks on transgender issues, launched a 'Get answers to the questions you don't dare to ask!' campaign and produced

¹ The number of employees here also includes employees who are on leave or on sick leave.

² ODA network: The Nordic countries' leading network for diversity in tech.

1 In the Group Management team, the gender balance was 42/58.

several films about LHBT+ people that were posted regularly throughout the year.

In relation to mental health, we carried out training on stress and burnout in management teams, and drew up a guide to avoiding burnout. We also marked World Mental Health Day, as in previous years.

In 2023, we worked closely with trade unions and employee representatives on a number of matters, for example, adaptation for transgender people and drawing up a survey about perceived inclusion for employees with a multicultural background. In addition, we held many presentations and workshops in management teams and attended several events to increase competence on inclusion. We also conducted courses in inclusive management and developed a toolbox that all employees can use to learn more about diversity and inclusion.

We measure and follow up inclusion in DNB based on the answers to questions regarding perceived inclusion in the Group's employee survey. The goal is a result of at least 5 on a scale of 1 to 6, and at the end of 2023, the result was 5.4 among the 83 per cent of permanent employees who responded to the survey. This shows that DNB employees to a great extent feel that they are included, respected and valued for who they are, and that they feel comfortable expressing their opinions.

In 2023, we also continued our efforts to ensure compliance with the requirements in the Norwegian Equality and Anti-Discrimination Act that give employers a duty to make active efforts to promote equality and prevent discrimination (activity duty). While we developed a framework for analysis of the risk of discrimination in our central HR processes in 2022, in 2023 we continued the work of assessing DNB employees' opportunities to

combine work and family life, as well as their access to development and career opportunities and rewards. For a full account, see our 2023 report on the activity duty and duty to issue a statement on dnb.no/sustainability-reports.

In 2023, in the Norwegian part of DNB, women's fixed salary as a proportion of men's was 86.8 per cent, when calculating salaries without taking into consideration position level and content. This is an increase of 0.3 percentage point compared with 2022. In 2023, we mapped a new job architecture, which provided a basis for an updated report on equal pay for 2023. The report is attached to the report on the activity duty and duty to issue a statement for 2023.

In DNB we have zero tolerance for bullying and harassment, and we work systematically and purposefully to prevent and handle unwanted incidents. In our annual HSE survey, 333 employees answered 'Yes' to the question 'Have you been subjected to bullying or harassment from a customer or colleague over the past 12 months?', compared with 273 in 2022. This corresponds to 4 per cent of those who responded, with about half of the incidents occurring in connection with customer contact.

In 2023, a total of 16 cases relating to discrimination or harassment were registered and handled. Of these, 10 were reported using DNB's electronic whistleblowing channel.

In 2023, we hired 1 261 new employees, which represented a 2.2 per cent reduction compared with 2022. The Group's employee turnover was 7.6 per cent. This was somewhat lower than 2022, when the turnover was 8 per cent.

HSE figures

| | 2023 | 2022 |
|---|---------|--------|
| Number of accidents at work ² | 11 | 3 |
| Number of work-related deaths | 0 | 0 |
| Sickness absence (per cent) | 5.3 | 4.4 |
| Number of working days lost as a result of sickness absence | 100 746 | 85 834 |

Attractive workplace and learning

Over time, DNB has worked to facilitate lifelong learning and motivate employees to engage in this kind of learning so that they can stay relevant both now and in the future, through upskilling and reskilling initiatives. At the beginning of 2023, we launched an initiative for skills enhancement and employee development through DNB University (DNBU). The goal is for DNBU to offer good learning opportunities that give added value and development for individual employees and for DNB as an organisation. The establishment of DNBU is also important for ensuring that DNB is an attractive employer and that it is known that we offer employees relevant training.

All permanent employees have access to our Motimate digital learning platform, which at the end of 2023 had more than 850 courses that had been produced in-house. Over 94.5 per cent of employees were active Motimate users. Some courses are labelled mandatory, and the completion rate for these was 95 per cent in 2023. Our employees also have access to over 16 000 learning resources via LinkedIn Learning, and in 2023 we had just over 6 500 active users of this solution. The Group's employee survey measures whether employees are satisfied with their opportunities for learning and development, and in the autumn of 2023, the average score was 5.0 (on a scale of 1–6) for the question 'I'm happy with the opportunities I have for learning and development', which is unchanged from 2022.

In a world that is continuously changing, with new competence requirements constantly arising, it is important to have an effective performance management process. Our performance dialogue process contributes to ongoing communication between employees and managers to ensure development and strong performance in accordance with DNB's strategy and goals. Among those who responded to the 2023

employee surveys, 92 per cent (with women and men equally represented) replied that they have had at least one performance dialogue, and 72 per cent of these reported that the conversations had been useful. We also offer our employees performance coaching from our certified in-house coaches.

Purchasing

In 2023, we worked systematically on the topic of diversity and inclusion with suppliers whose main delivery is labour. This applies to 25 suppliers that deliver, among other things, consulting, legal and IT services, which accounted for around 18 per cent of DNB's supplier costs in Norway. Of these 25 suppliers, 16 have various diversity and inclusion requirements in their contracts, and 18 report regularly on concrete KPIs or targets relating to gender balance on their boards and management teams. They also report on the measures that are implemented to achieve gender balance.

Some supplier relations involve higher risk than others. In such cases, we enter into a dialogue with the supplier if we learn about incidents or challenges associated with the supplier's business operations or industry that we want to gain a better understanding of. Other examples may be that we advise our partners on how they can set up whistleblowing channels or facilitate feedback on guidelines and procedures.

During the risk assessment process, all of DNB's suppliers with higher inherent risk must state whether they have a policy or routine that includes gender balance and diversity, and describe how they work on this within their organisation. We also use the results of a sustainability analysis prepared by EcoVadis as a basis for our supplier management when relevant. We have seen positive developments among our suppliers relating to gender balance since we put this on the agenda.

² The reason for the increase is that we as of 2023 also report minor injuries that do not require medical follow-up. Previously, we have only reported injuries that needed treatment.

To ensure that diversity and inclusion are safeguarded in our collaboration with our largest strategic IT partners, we have initiated several joint activities, both for those who work from DNB's premises and for those who work from their own. The goal is to increase insight into and competence relating to each other's cultures, to create an awareness of our roles in society, and to ensure equality and build psychological safety. At the same time, we have taken steps to increase the number of female managers and motivators, including through adapted working days, skills-enhancing measures and a mentor scheme, which has also led to more women returning to work at the end of their maternity leave.

The way forward

The diversity and inclusion strategy stands firm, and we will continue to implement it in the time ahead. Multicultural diversity is a stated priority area that will be given greater attention. An increasing proportion of Norway's population is multicultural, and this is reflected in the customer base and among our employees. In the time ahead, fully succeeding in the inclusion of people with multicultural backgrounds will be very important, as will managers' multicultural competence. To achieve this, we will work to obtain a greater understanding of perceived inclusion for this group of people.

We will continue to work to promote diversity among the participants in our management and talent development programmes. All programmes are closely evaluated and improvement measures are implemented immediately when this is necessary. All employees should be familiar with our employee development system, and more mandatory training measures will be initiated than before, targeting managers and employees alike.

We will continue to support employees' development in accordance with their needs and those of the organisation. We have gathered several of the development offerings in one place, to make it easier for each employee to find suitable options. We will continue to develop the options on offer in order to motivate employees to pursue lifelong learning.

The work with diversity and inclusion in the supply chain will continue in 2024. We will focus on selecting responsible suppliers and on having a positive influence through our purchasing. We will also assess whether the number of suppliers that are followed up in the area of diversity and inclusion should be increased, and consider the possibility of further KPIs.

Financial inclusion of personal customers

Access to basic financial products and services is a prerequisite for being able to participate fully in society, in financial and social terms. As Norway's largest bank, we play an important role in the personal finances of many Norwegian households, thanks to our products and services. The UN Principles for Responsible Banking (PRB) initiative has developed a guide on financial inclusion and financial health that we have used as inspiration for defining how we contribute in this area, and what we can do better. Financial inclusion is a matter of access to financial products and services, and financial health is a matter of the extent to which each person finds that they are able to handle their own finances and have faith in their own financial future. The work on financial inclusion has focused particularly on more vulnerable population groups or groups with special needs. We have mapped who they are, how they are taken into account by the bank, and whether there is something we should do differently.

We have defined three areas in which we believe DNB is particularly able to contribute to financial inclusion and financial health for our personal customers:

1. Access to information and basic banking services

- DNB offers basic banking services to any person who wants to establish a customer relationship with the bank, as long as they meet the requirements associated with the anti-money laundering rules and legislation. A minimum requirement is being able to document one's own identity, and for some customers in especially difficult circumstances, it can be difficult to provide this. One example is refugees, and for this group DNB has adapted its routines in order to be able to help people in a particularly vulnerable situation, also when they do not have the documentation usually required for access to banking services.
- Information about our banking services must be available to as many people as possible. We are carrying out structured work to ensure that digital information complies with the universal design requirements, so that as many people as possible can use the bank's digital services. We have developed a range of adapted products and services for customers who are less digitally proficient or customers with special needs, such as people who are blind or partially sighted. This includes braille on bank cards and a talking code device. We have also maintained non-digital services, consisting of the BrevGiro (giro sent by post) and a dedicated phone number for questions regarding these services. We also offer SMS services that customers can use to gain an overview of their finances, allowing them to view their balance, pay bills and make transfers. This makes bank services more accessible for customers who are less comfortable with using digital services. We are also available for all of our customers through the customer service centre and our 51 branch offices throughout Norway.

2. Long-term financial security through savings and ownership of own home

We help customers plan their long-term financial security through savings for their future and for being able to buy their own home. Examples of measures:

- Use of the savings app Spare makes it easy for customers to save and gain a good overview of their savings. The app allows them to see how much pension they have accumulated and how much their employer is setting aside for them, and to easily purchase mutual funds and shares.
- DNB is a leading provider of mortgages in Norway, a country in which over 80 per cent of the population own the home they live in³. For some groups, for example, young people, who are often looking for their first home, it is particularly difficult to enter the housing market. DNB has a special focus on this group, and offers, among other things, favourable mortgage rates for young customers. Another measure is *Vennelån* (friend loans), a product which makes it easier to grant a loan to friends who want to buy a home together. The *Vennelån* product includes a draft co-ownership contract and a free advisory session with a lawyer, in partnership with the law firm Ally.
- We help customers who are struggling to keep up with payments on interest and instalments on their mortgages by looking into possible measures such as interest-only periods, extended repayment periods and other solutions that may help the customer.
- Through the #huninvesterer (#girlsinvest) campaign, we have worked since 2019 to raise women's awareness of the differences between women's and men's finances, to increase their financial literacy and to make it easier for them to take action, as we see pervasive financial disparities in Norway, with women consistently owning less than men. We work systematically to obtain and share knowledge about the barriers to financial gender equality, including in relation to investments, ownership, entrepreneurship and management. Based on the insight we gain, we highlight a new topic every year.

3. Better financial health through advisory services adapted to own needs

DNB offers financial advisory services through several channels: the online bank and the mobile banking app, the customer service centre, and the branch offices. Our employees regularly undergo skills enhancement in order to be good advisers. General advice on, for example, everyday finances or savings, can also be found on the DNB Nyheter (DNB News) website.

³ Facts about housing (ssb.no/bygg-bolig-og-eiendom/faktaside/bolig) – in Norwegian only

What was done in 2023?

In 2023, we worked to clarify what financial inclusion and health mean for DNB, and we defined three areas in which we believe DNB is particularly well equipped to help our personal customers. These are described in the introduction above.

Most of our efforts to promote financial inclusion are ongoing, but we are also working to improve and further develop products and services to increase our personal customers' financial inclusion and financial health even more.

Some examples of new or strengthened measures from 2023:

- A growing number of mortgage customers contacted the customer service centre for advice on managing their mortgages. In collaboration with the customers, we found solutions such as interest-only periods, extended repayment periods and refinancing, by merging mortgages and loans or by making use of other opportunities in the Norwegian Lending Regulations.
- Through the *Ung-milliarden* (young billion) campaign, we shed light on the obstacles many young people encounter when entering the housing market. Here we made a commitment to lend at least NOK 2 billion in total to qualified first-time buyers who do not have enough equity or who cannot receive help from their parents.
- We established a dedicated team of advisers for young people who want to enter the housing market, or who are in the process of doing so, to help them succeed at realising their dream of owning their own home. The launch of the concept *Ung-samtalen* (young conversation) resulted in us talking to a record number of young people.
- We continued to work to facilitate saving: In the Spare app, we launched a personalised investment film to give customers an overview of their own investments, in addition to market updates and savings tips. Saving was also at the heart of DNB's summer campaign *jegbufrer* (I'm buffering) which was about making smart choices in everyday life and how saving even small amounts can make a difference in the long term. Despite 2023 being a challenging year in terms of inflation and high interest rates, many of our customers continued saving. At the end of 2023, 33 per cent of our active customers saved regularly, which is in line with the previous year. 'Active customers' mean customers with deposits or loans in DNB that exceed NOK 1 000, or at least one capital transaction over the past three months. Regular saving means customers with an ongoing DNB savings scheme for saving in mutual funds and/or in a savings account.
- In the autumn of 2023, we launched a new national *#huninvesterer* campaign, where the theme was 'female role models'. The campaign was supplemented with a national tour that consisted of 30 events for over 6 000 participants. We also organised a *#huninvesterer* (*#girlsinvest*) campaign in Sweden for the first time. Moreover, we launched *#huninvesterer Oppstart* (*#girlsinvest start-up*) – a guidebook for female entrepreneurs – together with the *#huninvesterer* academy, which consists of eight digital learning modules, in order to increase competence on finances, investment and entrepreneurship.
- We kept the *Din samtale* (Your conversation) concept, to help customers in particularly demanding situations. This is where a dedicated team helps customers who contact us, including by showing them how to set up a budget, get a better overview and giving them advice on how to handle debt.

The way forward

DNB's ambitions for financial inclusion are wide-ranging in the organisation, and are linked to the business strategy. In order to better gauge the effect of relevant measures, in 2024 we will continue to define KPIs associated with financial inclusion. We will draw on the insight we have gained so far, and continue to build on it, and we will consider whether there are areas or customer groups we should focus more closely on in 2024, from the perspective of financial inclusion and health.

Corporate governance

Corporate governance includes factors that affect our ability to have sustainable business practices, as well as responsible and ethical business management. This can include a company's management structure, ethics and corporate governance, transparency, anti-corruption work, anti-money laundering measures and tax issues.

For DNB, the following topics have been identified as material under Corporate governance:

- Information security (including Data protection)
- Financial crime

Information security

Link to the UN Sustainable Development Goals:

In order to maintain trust and competitiveness, it is important for DNB to deliver secure, stable and user-friendly services to our customers. As a major player in Norwegian society, we play an important role in the financial infrastructure and can help maintain trust in the financial system, also during a time of geopolitical unrest. War in Europe and the Middle East, and general geopolitical turbulence, have created extra uncertainty in 2023. With a dynamic threat landscape and rapid technological advances, it is increasingly important that DNB helps maintain trust in the financial infrastructure and secures access to financial services.

The largest digital threat against DNB and the financial sector is still from threat actors whose motivation is to steal information, sabotage systems or achieve financial gain. With the war in Ukraine, however, we are seeing a shift towards threat actors that conduct cyber attacks to promote a political agenda. During the past year, we have seen that financial institutions can be affected by cyber attacks because of their important function in society. DNB is therefore also a potential target for cyber attacks from politically motivated threat actors, as we handle large amounts of sensitive and confidential information about customers, employees, business partners and society in general. A cyber attack can have serious consequences for the profitability and reputation of the Group, as well as for our customers' trust in us. Protecting information security means safeguarding information against unauthorised access, changes, deletion or loss, and ensuring that the information is available, updated and correct. Digital threats against the financial infrastructure are the Group's highest operational risk.

DNB works with information security at every level of the organisation and in all processes, also in relation to customers and suppliers. We have good guidelines

and a clear division of responsibilities relating to how information security and data protection are safeguarded in the business. Risk management processes have been established to continuously identify and follow up risk. The processes are meant to ensure compliance with internal requirements as well as with laws and regulations, and that risk is mapped and managed.

We must have sufficient expertise and capacity to achieve the appropriate security level and to carry out good security work at every level. The Group has set up its own specialist functions to ensure that it has the necessary security competence to support operational units in the performance of security work.

What was done in 2023?

Cyber attacks have become one of the largest challenges to society in our time, and the Allianz Risk Barometer report for 2023¹ ranks cyber incidents and business interruption as the two main global business risks. These are risks that also DNB is working extensively with, and that can affect our information security.

Systematic efforts over a period of several years have yielded good results in terms of operational stability, which is now at a satisfactory level, and well within the Group's risk appetite. There were 19 days with significant operational incidents in 2023, a decline from 21 in 2022. Continuous work is being done to identify underlying causes, and measures are being implemented on an ongoing basis.

Number of days with significant disruptions to business operations

¹ Allianz Risk Barometer 2023 (<https://commercial.allianz.com/content/dam/onemarketing/commercial/commercial/reports/Allianz-Risk-Barometer-2023.pdf>).

During the past few years, we have seen an increase in the number of cyber attacks, and the largest threat comes from supply chain attacks, ransomware attacks and denial-of-service attacks. In 2023, we recorded 20 208 cyber attacks and IT security incidents, which is an increase from 19 852 attacks in 2022. The number of attempted attacks and incidents that are handled is increasing every year, but we have nonetheless seen a decline in the number of incidents with the potential to cause serious harm. We believe that this is due to strengthened security at DNB, and changes in the threat landscape, as it is often cryptocurrency exchanges that are subject to digital bank robberies. None of the cyber incidents that were registered in 2023 had serious consequences for customers or the Group.

Number of registered cyber attacks and IT security incidents

Our governing documents for our work to promote information security

- **DNB's Code of Conduct:** Through our work, we gain access to and produce information about our customers, employees and partners. The Code of Conduct describes how we at DNB will protect this information and avoid exposing these people to unnecessary risk. The Code of Conduct also states that employees of DNB must process personal data in accordance with legal requirements and internal rules. Customers, suppliers, partners, employees and owners should have confidence in our processing of personal data and must be able to rely on us to safeguard their privacy.
- **Group policy for information technology:** The purpose of this Group policy is to establish key principles and responsibilities relating to the management and delivery of information technology in DNB.
- **Group policy for security:** This Group policy sets out roles and responsibilities relating to security work. The document does not cover the work on ensuring a safe working environment or HSE efforts. Security at DNB is a matter of ensuring our ability to avoid damage to or loss of assets as a result of undesirable, intentional actions, as well as technological, environmental or human errors or accidents.
- **Group instructions for data protection:** These Group instructions are intended to contribute to DNB complying with requirements laid down in external and internal rules and legislation in the area of privacy protection. The instructions set out basic requirements relating to DNB's processing of personal data.
- **DNB's global framework for personal data protection:** The framework establishes rules and principles for how companies in the DNB Group should comply with the requirements of the Norwegian personal data rules and legislation. The framework is intended to help companies in the DNB Group process personal data in a responsible, lawful and secure manner. Personal data must be processed in accordance with basic privacy protection considerations, Group-wide requirements, and external and internal requirements that are specific to the individual legal entities.

Data protection

Maintaining a high level of compliance with the data protection rules and legislation is continuous work. Being open towards customers about how we process their personal data was a prioritised area throughout 2023, and information about how DNB processes personal data has now been gathered at www.dnb.no/en/about-us/protection-of-personal-privacy.html.

When we develop new products and services, it is important that we integrate data protection into the technological solutions. To ensure this, we have improved our Group guidelines for data protection by design and have included examples of concrete measures. When unwanted incidents occur, they must be handled quickly and efficiently. We have a low threshold for reporting personal data security breaches, and in 2023 we sent 114 non-compliance reports to data protection authorities.

DNB was not issued any orders or non-compliance fees by the Norwegian Data Protection Authority in 2023.

We see a growing interest in the use of artificial intelligence in every sector of society, especially generative artificial intelligence. Generative artificial intelligence can provide new opportunities, but we also have a responsibility to ensure that the technology is used in a secure and good way. To contribute to this, we have drawn up guidelines for employees' use of external tools that use generative artificial intelligence.

Transparency is critical in order for our customers to trust us, and we are working continuously to provide information about our processing of personal data, also in DNB's digital channels. At DNB, we aim to ensure that our processing of personal data is secure, transparent and understandable. In order to protect the data of our customers and employees effectively, we will therefore keep up our good, continuous work to ensure that DNB complies with the rules and legislation in this area.

The ability to detect and manage cyber security incidents before they have an impact on our operational stability continues to be a key priority area. In 2023, we focused particularly on strengthening our ability to detect incidents using advanced tools and with a threat- and risk-based approach. When handling cyber security incidents, we see that our suppliers play an increasingly important role and that attacks against third parties are becoming a larger part of the threat landscape. We conduct regular drills on managing cyber incidents and general incident management at every level within our organisation. We also carry out these types of drills together with other players in the financial industry and other actors with critical infrastructure.

Our employees' knowledge of security is important in terms of ensuring the safety of our customers and employees. All new employees are therefore required to complete basic training on information security. In addition, all employees are also required to complete

mandatory training every year. By the end of 2023, a total of 97 per cent of all employees had completed the basic training on information security, and 87 per cent had taken the mandatory courses. This is an improvement on the 2022 figures and is considered a good completion rate.

In 2023, we continued building on the training and awareness-raising initiatives that we launched in 2022. We also expanded the training to new groups of employees. After having had a strong focus on increasing competence on cyber security in the technology environments, in 2023 we expanded the training and skills-building measures to the rest of the organisation, with a particular focus on training managers.

We are doing targeted work to improve cyber security by identifying measures that may help reduce the cyber risk and increase our maturity relating to security. This work is set out in our three-year cyber security roadmap. A new

external survey of our security maturity was carried out in 2023, showing an increase compared with the same survey in 2021, and that we are now at an acceptable level. Our score is also higher than that of comparable financial institutions.

The road ahead

In 2024, we will continue our work of safeguarding the information security of the Group by protecting information from unauthorised access, change, deletion or loss, and ensuring that the necessary information is available, updated and correct.

Our ability to adapt continues to be an important quality in a world of geopolitical instability, ongoing digitalisation and a challenging threat landscape where new actors with other agendas and greater resources represent a new threat. We must therefore continue to build and maintain our digital resilience. In order to maintain secure and stable operations, we must keep up the work relating to the automation of solutions and vulnerability remediation, as well as the use of data analysis and artificial intelligence. Artificial intelligence will be a focus area in 2024, through the use of new technology. This will increase our resilience in the face of the threat landscape, and will help increase the information security, effectiveness and quality of our processes, products and services.

The risk of cyber attacks remains a significant threat to society and may have major societal consequences, resulting in a more challenging regulatory landscape, nationally and internationally. In 2024, DNB will work on the implementation of new rules and legislation for digital operational resilience². We will also continue to have a strong focus on security and compliance as a natural part of our processes, products and services.

We will increase awareness and knowledge of information security among our employees. In addition to general skills enhancement measures for all employees, we will keep devising and implementing specific measures targeted at different roles and areas of responsibility.

² The Digital Operational Resilience Act (DORA) - Regulation (EU) 2022/2554.

Financial crime

Link to the UN Sustainable Development Goals:

Financial crime, which includes fraud, money laundering and corruption, is a serious societal problem, a threat to our welfare system, and it also undermines a healthy business sector. As Norway's largest bank and an important player in the financial system, DNB plays a material role in limiting financial losses for society, our customers and us as a company. With the rapid digitalisation of society, cyber crime is an increasing threat for us as a financial institution, in that criminals are constantly developing new forms of digital fraud, for example.

We will help prevent and detect money laundering and terrorist financing by continuing to develop our transaction monitoring and KYC processes¹, as well as by having good internal control. We have deployed considerable resources in our anti-money laundering efforts, and work is continuously being done to improve compliance with the anti-money laundering rules and legislation, as well as to adapt to new changes and to manage the risk of money laundering.

In DNB, we have zero tolerance for corruption and are working to identify, assess and manage corruption risk associated with employees, customers, third parties and other relevant business relationships. All employees must have adequate competence on the corruption rules and legislation, be familiar with DNB's zero tolerance approach to corruption, and carry out a mandatory course to update their knowledge of our Code of Conduct every year.

Each unit in the Group is responsible for compliance with the rules and legislation relating to anti-money laundering and sanctions, as well as other relevant rules and legislation concerning financial crime in its own area of responsibility. Failure to comply with rules and legislation may result in loss of reputation, financial losses and administrative reactions, such as orders to rectify the

situation, administrative sanctions and, in the worst case, loss of the licence. All employees are required to update themselves annually on current governance principles for anti-corruption and money laundering. This is one of the measures we use to minimise the risk of financial losses for DNB, our customers and other business associates.

Raising awareness and competence building are also important from a societal perspective. We contribute to this by giving presentations in various forums and by organising webinars for customers on an ongoing basis on security culture and good payment routines. We also publish advice and recommendations, an annual report on DNB's threat assessment, and other reports on DNB's website, so that they are available to everyone.

What was done in 2023?

In 2023, we experienced a continued increase in fraud attempts, and further development of the methods used in 2022. Many players are continuing to carry out large, automated phishing attacks on our customers. The attacks vary from small attacks of fairly low quality to large, targeted and automated campaigns. Investment fraud continues to cause substantial losses for our customers, and the victims are often manipulated by criminals to withhold information requested by the bank in its attempt to stop or detect the frauds.

In the spring of 2023, we discovered a new method of fraud, known as 'safe account fraud'. The method involves victims being contacted by someone claiming to be from the bank or the police, informing them that someone has gained access to their account, and that they must move their money to a safe account. These cases are particularly demanding, as the criminals say that this is part of an ongoing police investigation, and that the victims must therefore not tell the bank that they have called. Cases of safe account fraud share many similarities with phishing cases, but the customers are tricked into transferring the money themselves to the criminals (social manipulation).

1 Know Your Customer.

Our governing documents for our work to combat financial crime

- **DNB's Code of Conduct:** The Code of Conduct states that we will work actively to prevent and detect money laundering and terrorist financing by following established rules and internal procedures for anti-money laundering and anti-terrorist financing. DNB has zero tolerance for all forms of corruption, and will act in an open, transparent and accountable manner. In DNB, we will actively prevent and detect corruption.
- **DNB's Global Anti-Corruption Framework:** The framework provides guidance for how the Group is to meet basic requirements and standards in the area, and is intended to help ensure a uniform, consistent approach to anti-corruption efforts in the Group. DNB's Global Anti-Corruption Framework is intended to serve as a guide to the operationalisation of prevailing legislation, preparatory works, and relevant guidelines.
- **DNB's Global AML Framework:** This framework is designed to help us prevent and detect money laundering and terrorist financing. The aim is to ensure that the Group complies with basic requirements and standards in this area, and to help ensure a consistent approach in the Group, both in Norway and internationally.
- **DNB's Global Sanctions Framework:** The purpose of this framework is to ensure that DNB complies with national and international legislation related to sanctions and export control, and to contribute to the uniform implementation of compliance work in the Group. The framework provides guidance on sanctions regimes we must comply with and describes the elements of DNB's Group-wide Sanctions Compliance Programme.

Digital fraud

| | 2023 | 2022 |
|---|--------|--------|
| Number of cases against customers | 9 723 | 9 343 |
| Number of customers affected | 5 010 | 4 625 |
| Number of cases we handled | 13 056 | 12 671 |
| Number of cases we reported | 38 | 28 |
| Total value of attempted fraud against customers and the Group that was stopped (NOK million) | 1 543 | 1 067 |

In 2023, there was a strong focus on improvement measures to prevent financial crime. Among other things, the risk classification method was strengthened

by adopting an updated Group-wide model. In addition, further development of electronic monitoring was given high priority; this is work we will continue in the time ahead. We are continuously evaluating new technological solutions, and started using advanced network analyses in 2023 so as to more easily uncover organised financial crime and corruption, among other things. In the work to combat financial crime, we are also using machine learning to both develop rules for the electronic monitoring and to improve the rules and prioritisation of alerts in the electronic monitoring system.

The coercive fine of NOK 50 000 per working day that was imposed on DNB on 1 September 2022 for not having complied with an order to verify the identities of the entire

customer base was dropped on 24 April 2023. Updating customer information is ongoing work, and we are working on this continuously to be able to understand and manage the money laundering risk we face.

In 2023, DNB sent a total of 2 563 reports to the Financial Intelligence Unit in Økokrim (the Norwegian National Authority for Investigation and Prosecution of Economic and Environmental Crime) due to suspicions of money laundering or terrorist financing. A single case can include a number of customer relationships and transactions, and in total we investigated 5 012 matters.

Having the right competence at an adequate level is of central importance to successfully detecting financial crime. All permanent employees and all Board members are therefore required to take annual courses on combatting money laundering, terrorist financing and corruption, as well as on international sanctions, and on the prohibition against disclosure. At the end of 2023, 94 per cent of employees and all of the Board members had completed training on financial crime. Training over and above the basic course level is based on the individual employee's responsibilities, roles and function in the organisation.

Affiliation with special interest organisations

In general, DNB does not use third parties in direct external stakeholder dialogue, either in Norway or internationally. The exception is membership in special interest organisations that can speak on behalf of, for example, industries. Cooperation and knowledge-sharing between banks and the public sector are vital in the fight against financial crime. DNB participates with other financial institutions in several cooperation initiatives, for example the meeting place for public-private cooperation on anti-money laundering and counter-terrorist financing, OPS AT (*Offentlig Privat Samarbeid – anti-hvitvasking og -terrorfinansiering*).

DNB's stakeholder work aims to give us an increased understanding of society's expectations of us, to create understanding of our role in society, and to share knowledge about the financial sector. We will disseminate knowledge and contribute to the sustainable transition nationally and internationally. We will also try to achieve the best framework conditions and to position DNB as an interesting dialogue partner, both in the industry, in relation to the authorities, and with regard to other stakeholders in society. Through transparent and effective documentation of our work relating to the authorities and stakeholders, we ensure compliance with the rules and legislation associated with lobbying. DNB is a member of the Transparency Register of the European Commission, the European

Parliament and the Council of the European Union. In connection with our membership, we have also signed the EU Transparency Register's Code of Conduct.

In 2023, a DNB employee participated, as a representative of Finance Norway, in the Securities Law Committee's work on, among other things, the report on the EU's Corporate Sustainability Reporting Directive (CSRD), Finance Norway's position on the Energy Performance of Buildings Directive (EPBD) and Finance Norway's work on green property and energy efficiency. In total, DNB paid NOK 30.1 million for membership in the industry organisations Finance Norway, the Norwegian Savings Banks Association and the Association of Norwegian Finance Houses.

Membership fees in industry organisations

| | 2023 | 2022 |
|--------------------|------|------|
| Paid (NOK million) | 30.1 | 23.9 |

The way forward

The fight against financial crime, money laundering and terrorist financing will continue at full force in 2024. DNB's improvement efforts in the area of anti-money laundering are structured well, and are designed to ensure shared priorities and joint progress. In 2024, we will continue the work of further developing our Group-wide risk classification method and strengthening the electronic monitoring. In addition, we will proceed with the work of standardising routines and processes associated with customer due diligence, which is an important premise for adequate quality and for a risk-based approach to the anti-money laundering work. We are continuously considering adopting new technology that could support the AML work to improve and simplify the work of combatting financial crime, for the benefit of customers and society.

Feature article:

Responsible tax practices and our tax contribution

A company's tax contribution is an important part of its corporate responsibility, and DNB contributes considerable amounts of tax every year. In 2023, our total tax contribution was NOK 13 139 million. In line with our overarching goals and values, we have responsible tax practices that safeguard the Group's interests and balance them against the needs of customers, shareholders, employees, and society in general. Our approach to tax is based on our overarching values and ethical principles (Code of Conduct), and we have a global tax strategy. Read more about the tax strategy and our tax contribution in the document DNB's Tax Contribution 2023 on dnb.no/sustainability-reports.

Responsible tax practices

We are exposed to tax risk due to our complex business model and because the Group has operations in many countries. We define tax risk as both risk of misapplication of the tax rules in connection with DNB's tax contributions, which in turn leads to the wrong tax expense, and tax-related matters associated with DNB's customers and other third parties that result in sanctions from the tax authorities or reputational loss for DNB. The risk is governed within the Group's risk management framework, and in the same way as other types of risk the Group is exposed to (read more about risk management in The Board of Directors' report on corporate governance on page 35). The tax risk is governed according to the model with three lines of defence:

- **The first line of defence** includes all of the Group's operative functions (business areas and staff and support units). All of the Group's operative functions have a local tax function. These in turn are supported by Group Tax, which consists of employees with a combination of tax, legal and accounting expertise. Group Tax identifies and handles tax risk based on appropriate guidelines, standards and tools..
- **The second line of defence** consists of the risk management function and the compliance function. The functions must be involved in and contribute to assessing risk when introducing new strategies, organisational changes and other changes in the operations, provided that such changes in the operations are considered to be material.

- **The third line of defence** is Group Audit, which assists the Board in ensuring that all material elements of the Group's internal control, including risk management and compliance, are of satisfactory quality.

Our responsible approach to tax involves having low tax risk and being transparent about our tax affairs. This entails, among other things, that we are transparent with the tax authorities in all of the countries in which we have operations. It is our aim to provide sufficient and clear information in the tax return and in our answers to the tax authorities' queries. Tax matters must be handled professionally and efficiently in accordance with DNB's values. In Norway, we have regular meetings with the tax authorities to discuss their queries and any material questions relating to our tax matters. Their feedback and audits are used to reduce our tax risk.

In addition to the Norwegian Tax Administration performing controls in different areas, our statutory auditor reviews our tax expense, and our internal audit function carries out audits of specific tax areas.

We aim to follow tax rules and international conventions in every country in which we operate, and seek to act in accordance with the purpose of the rules. DNB will not facilitate or otherwise contribute to tax evasion or aggressive tax planning for customers that would have a negative effect on society. An important part of our compliance relating to tax is to monitor and implement regulatory changes in the area of tax, and we work continuously to take a systematic approach to this.

All of the products we offer undergo a comprehensive approval procedure where tax risk is one of the factors assessed. We also consider tax risk associated with our relations with third-party suppliers.

The Board monitors tax issues and tax risk through the Audit Committee and the Risk Management Committee. These committees receive regular reports and updates on material tax risk, tax disputes and developments in tax policy.

We have a Tax Control Framework (TCF), which contributes to the ongoing efforts to implement the tax strategy in the organisation. The purpose of the TCF is to help DNB meet the expectation of effective handling of tax cases.

How much tax did the DNB Group pay in 2023?

Taxes paid constitute a cost for the Group and include:

Income tax

The Group pays tax on income generated in the individual countries in which the respective entities are resident for tax purposes or have operations. The tax is calculated based on the country's tax rules. Paid income tax is actual tax paid during the year regardless of which fiscal year the tax applies to.

Non-deductible value added tax (VAT)

DNB pays VAT on purchases of goods and services. The Group is only allowed partial deductions for input VAT, which means that a large part of the VAT constitutes a cost for the Group. The amount includes all non-deductible input VAT on the purchase of goods and services.

Employer's national insurance contributions

As an employer, DNB is obliged to pay employer's national insurance contributions and other social security contributions based on the employees' salaries and other remunerations.

Financial activities tax

The financial activities tax is an additional tax imposed on companies within the financial services sector. This tax consists of two elements: an increased income tax rate for financial institutions (3 percentage points), and an additional tax for employers in the financial services industry, based on the payroll of the companies (5 percentage points).

How much tax did the DNB Group collect on behalf of the authorities in 2023?

Other tax

This may, for example, be withholding tax on interest and dividends paid to countries where the Group's customers or investors are resident for tax purposes, and which DNB cannot subtract from other tax.

In addition to taxes paid by the Group itself, DNB collects the following tax on behalf of the authorities through its operations:

Tax deductions for employees

In many countries, employers are required to withhold taxes and other social security contributions when paying salaries to employees.

VAT paid to the authorities

DNB must report and collect VAT on the purchase and sale of taxable goods and services. In addition, DNB calculates and pays VAT on purchases of goods and services from abroad. Net collected tax after deduction of tax on the Group's purchases of goods and services is reported and paid to the local tax authorities in the individual countries.

Other tax

This may, for example, be withholding tax deducted from interest and dividend payments and collected on behalf of the authorities.

Chapter 3

Directors' report and annual accounts

| | |
|--------------------------------------|-----|
| Directors' report | 118 |
| Annual accounts DNB Group | 131 |
| Annual accounts DNB Bank ASA | 211 |
| Statement | 259 |
| Auditor's report | 260 |
| Auditor's assurance report, CR | 266 |

Directors' report

In 2023, the Norwegian economy was characterised by a low unemployment rate, a weak NOK and high inflation. As a result of this, the Norwegian central bank, Norges Bank, raised the key policy rate from 2.75 per cent to 4.50 per cent during 2023. The higher interest rates contributed to a lower level of activity in the Norwegian economy, which showed clear signs of cooling down during 2023. Despite this and geopolitical uncertainty internationally, DNB's results for the year were strong, driven by profitable volume growth and positive effects as a result of repricing. At the end of the year, the Group's capital situation remained sound, and the portfolio was well-diversified and robust. With a proposed dividend of NOK 16.00 per share for 2023 and share buy-backs at NOK 6.85 per share, the Group continues to deliver on its dividend policy.

Strategy and targets

DNB's strategic ambitions are that the customer chooses us, we deliver sustainable value creation, and we find the solutions together. DNB's strategy is based on developments and anticipated changes in external, strategic drivers, and has been drawn up within the scope of the Group's corporate governance, including frameworks relating to compliance and risk appetite, as well as applicable financial framework conditions. Several strategic priorities and ambitions have been defined with a view to ensuring the Group's target attainment and competitiveness, both today and in a long-term perspective. Read more about the strategy from page 18 onwards.

Sustainability

As Norway's largest financial institution, DNB has both a great responsibility, and – through considerable influential power – the opportunity to contribute positively to society. In DNB, sustainability and corporate responsibility are a matter of how the Group creates value for all its stakeholders by considering both risks and opportunities in a long-term perspective. Environmental, social and governance (ESG) factors are integrated into the strategy and the Group's corporate governance, and through an integrated annual report and reporting in accordance with the GRI (Global Reporting Initiative) standards, DNB meets the authorities' requirements for sustainability reporting. Read more about DNB's sustainability ambitions

and about how sustainability is taken into account and safeguarded in all our activities in the chapter Sustainability in DNB from page 43 onwards.

Operations in 2023

DNB recorded profits of NOK 39 479 million in 2023, up NOK 6 041 million, or 18.1 per cent, from 2022. Annualised return on equity for the year was 15.9 per cent, compared with 14.7 per cent in the year-earlier period, and earnings per share were NOK 24.83, up from NOK 21.02 in 2022.

The common equity Tier 1 (CET1) capital ratio at the end of the year was 18.2 per cent, down from 18.3 per cent in 2022, and 1.4 percentage points above the supervisory authorities' current expectations. As a result of the Group's strong results and capital position, the Board has proposed to pay a dividend of NOK 16.00 per share.

Net interest income increased by NOK 13 253 million from 2022, driven by repricing effects following interest rate hikes from the Norwegian central bank, Norges Bank, in addition to volume growth and increased interest income on equity. Net other operating income increased by NOK 2 310 million, or 12.9 per cent. Net commissions and fees showed a strong development in 2023 and increased by NOK 787 million, or 7.6 per cent. Money transfer and asset management services were the main contributors. Total operating expenses were up NOK 2 817 million from 2022, due to higher activity and a larger number of full-time employees. Impairment of financial instruments totalled NOK 2 649 million in 2023. In the personal customers and corporate customers industry segments, there were impairments of NOK 276 million and NOK 2 376 million, respectively. The impairment provisions in the corporate customers segment were primarily related to the legacy portfolio in Poland and customer-specific events in stage 3, spread across various industry segments. The impairment provisions were partly curtailed by net reversals as a result of restructurings in the oil, gas and offshore industry segment.

Review of the annual accounts

In accordance with the provisions of the Norwegian Accounting Act, the Board of Directors confirms that the

accounts have been prepared on a going concern basis, and that the going concern assumption applies. Under Section 3-9 of the Norwegian Accounting Act, DNB prepares consolidated annual accounts in accordance with IFRS Accounting Standards as adopted by the EU. The statutory accounts of DNB Bank ASA have been prepared in accordance with the Norwegian regulations concerning annual accounts for banks.

Net interest income

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|---|---------------|---------------|
| Lending spreads, customer segments | 27 261 | 25 767 |
| Deposit spreads, customer segments | 18 925 | 11 842 |
| Amortisation effects and fees | 4 327 | 4 197 |
| Operational leasing | 2 993 | 2 467 |
| Contributions to the deposit guarantee and resolution funds | (1 259) | (1 231) |
| Other net interest income | 9 300 | 5 251 |
| Net interest income | 61 547 | 48 294 |

Net interest income increased by NOK 13 253 million, or 27.4 per cent, from 2022, mainly due to positive effects from repricing, increased volumes, and higher interest on equity. There was an average increase in the healthy loan portfolio of NOK 126.8 billion, or 7.2 per cent, from 2022. In the same period, there was an increase of NOK 77.2 billion, or 5.7 per cent, in average deposit volumes. Combined spreads widened by 18 basis points compared with the year-earlier period. Average lending spreads for the customer segments narrowed by 2 basis points, and average deposit spreads widened by 45 basis points.

Net other operating income

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|--|---------------|---------------|
| Net commissions and fees | 11 115 | 10 328 |
| Basis swaps | (612) | 822 |
| Exchange rate effects related to additional Tier 1 capital | 332 | 794 |
| Net gains on other financial instruments at fair value | 5 563 | 2 531 |
| Net insurance result | 1 183 | 1 235 |
| Net profit from associated companies | 449 | 746 |
| Other operating income | 2 120 | 1 384 |
| Net other operating income | 20 150 | 17 840 |

Net other operating income increased by NOK 2 310 million, or 12.9 per cent compared with 2022. There were sound results for both customer and trading revenues in DNB Markets, which contributed positively to the income from financial instruments. However, this was partly offset by exchange rate effects related to additional

Tier 1 capital and basis swaps. Net commissions and fees showed a strong development and increased by NOK 787 million, or 7.6 per cent, in 2023, driven by a strong performance across product areas, particularly within money transfer services, which saw higher income than pre-pandemic levels, as well as increased income from asset management services.

Operating expenses

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|---|-----------------|-----------------|
| Salaries and other personnel expenses | (16 278) | (14 673) |
| Restructuring expenses | (42) | (18) |
| Other expenses | (8 506) | (7 648) |
| Depreciation of fixed and intangible assets | (3 613) | (3 455) |
| Impairment of fixed and intangible assets | (181) | (10) |
| Operating expenses | (28 620) | (25 803) |

Total operating expenses were up NOK 2 817 million in 2023, due to higher salary and personnel expenses reflecting increased activity and a further strengthening of competence in the area of compliance and technology, as well as an increase in IT expenses. The cost/income ratio was 35.0 per cent in 2023, down from 39.0 per cent in 2022.

Impairment of financial instruments

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|--|----------------|------------|
| Personal customers | (276) | (413) |
| Commercial real estate | (241) | (212) |
| Residential property | (200) | (156) |
| Power and renewables | (292) | (66) |
| Oil, gas and offshore | 905 | 1 558 |
| Other | (2 545) | (438) |
| Total impairment of financial instruments | (2 649) | 272 |

Impairment of financial instruments amounted to NOK 2 649 million in 2023, compared with net reversals of NOK 272 million in 2022. The year 2023 was affected both by increased interest rates and by high inflation, which had an impact on different segments.

The personal customers industry segment saw impairment provisions of NOK 276 million in 2023, compared with NOK 413 million in 2022. The impairment provisions were in stage 3, partly curtailed by net reversals within stage 2, and were mainly within consumer finance. The corporate customers industry segment had impairment provisions in all three stages, amounting to NOK 2 373 million.

This was an increase compared with 2022, where there were reversals of NOK 686 million. The figures also include impairment provisions relating to the legacy portfolio in Poland of NOK 671 million for the full year. Excluding the legacy portfolio, the impairment provisions could primarily be seen in stage 3, relating to negative developments for specific customers within various industry segments. The stage 3 impairment provisions were partly curtailed by successful restructuring processes for customers in offshore-related industries. In stages 1 and 2, an increase could be seen within the retail industries and services industry segments. For the portfolio as a whole, the macro forecast had a relatively limited effect on stages 1 and 2 for the year. Net stage 3 loans and financial commitments amounted to NOK 23 billion at end-December 2023, which is a decrease of NOK 1 billion from the end of 2022.

Taxes

The DNB Group's tax expense for 2023 is estimated at NOK 10 811 million, representing 21.4 per cent of pre-tax operating profit. The low tax expense is mainly a result of the calculation of debt interest distribution at the end of the year, as well as an increase in income that is not liable for tax and non-deductible expenses. The tax guidance going forward is 23.0 per cent.

Funding, liquidity and balance sheet

The US Commercial Paper (USCP) programme was the most stable source of short-term funding for DNB in 2023. The focus on stability in the outstanding volume and the requirements relating to liquidity reserves led to a high level of activity. At year-end, the outstanding volume under the USCP programme was approximately USD 25 billion. Issues under the USCP programme have experienced healthy growth, as have issues under the European Commercial Paper/Certificates of Deposit (ECP/ECD) Programmes, for which the year ended with an outstanding volume of approximately EUR 13.5 billion. In both markets, DNB focused on issues with terms to maturity of 6–12 months, but also issued shorter-term funding in the interest of our investors. Access to short-term funding was good throughout the year, with USD remaining the most important currency, but with a growing interest in EUR and GBP, which had a positive diversification effect on the Group's short-term funding.

There were large fluctuations in credit risk premiums for long-term funding in 2023, but the levels at the end of the year were similar to those at the start of the year, with the exception of covered bonds, where credit risk premiums increased significantly throughout the year. This

was partly a result of fewer purchases from central banks. After a positive start to the year, March saw a significant shift in market conditions, caused by turbulence in some parts of the banking sector. The markets subsequently recovered and showed marginally better developments towards the summer. The market sentiment in the second quarter was to some extent characterised by the negotiations surrounding the raising of the debt ceiling in the US. In the third quarter, developments remained relatively flat. The fourth quarter started with a weaker risk sentiment, but this changed towards the end of the fourth quarter, helped by lower inflation figures and relatively favourable macro figures. The improvement in risk sentiment led to a sound reduction in credit risk premiums towards the end of 2023.

DNB made long-term issues in the SEK, JPY, NOK, EUR, USD and CHF markets totalling NOK 101 billion in 2023, compared with NOK 98 billion in 2022. Among new issues in 2023, approximately half of the volume was issued in senior instruments that help to meet the minimum requirement for own funds and eligible liabilities (MREL). A significant volume of covered bonds was also issued, around 35 per cent of the total volume. The remaining volume was issued as own funds (additional Tier 1/Tier 2). The terms to maturity of new issues in 2023 were mainly from 3 to 5 years.

The total nominal value of long-term debt securities issued by the Group was NOK 506 billion at year-end 2023, compared with NOK 537 billion one year earlier. The average remaining term to maturity for long-term debt securities issued was 3.6 years, compared with 3.5 years the previous year. The short-term liquidity requirement, the Liquidity Coverage Ratio (LCR), remained stable at above 100 per cent throughout the quarter and stood at 146 per cent at the end of 2023. The net long-term stable funding ratio, NSFR, was 117 per cent, which was well above the minimum requirement of 100 per cent for stable and long-term funding.

Total combined assets in the DNB Group were NOK 4 035 billion at year-end 2023, up from NOK 3 727 billion a year earlier. Total assets in the Group's balance sheet were NOK 3 440 billion, compared with NOK 3 233 billion at the end of 2022. Loans to customers increased by NOK 36 billion, or 1.8 per cent, from the end of 2022 to the end of 2023. Customer deposits were up NOK 26 billion, or 1.9 per cent, during the same period. The ratio of customer deposits to net loans to customers was 74.9 per cent, down from 75.1 per cent a year earlier.

Capital

DNB's capital position remained strong and was well above the regulatory expectations and requirements throughout 2023. The DNB Group's common equity Tier 1 (CET1) capital ratio was 18.2 per cent at the end of 2023, down from 18.3 per cent at the end of 2022.

The Group's common equity Tier 1 capital increased by NOK 5.8 billion to NOK 199.9 billion in 2023. Retained earnings contributed positively and increased by around NOK 14 billion, but were offset by the share buy-back programmes. DNB's strong capital position provides a firm foundation for continued delivery on the Group's dividend policy, and the Board of Directors has proposed a dividend of NOK 16.00 per share for 2023, for distribution from 8 May. The CET1 requirement for DNB was 15.6 per cent at the end of 2023, while the ratio expectation from the supervisory authorities was 16.8 per cent including Pillar 2 Guidance. The Group's common equity Tier 1 capital ratio was thus 1.4 percentage points above the supervisory authorities' current capital level expectation.

The risk exposure amount (REA) increased by NOK 38 billion from 2022 to NOK 1 100 billion in 2023. The REA for credit risk, including counterparty credit risk, increased by NOK 24 billion or 2.5 per cent from 2022 and can be ascribed to volume growth. The leverage ratio was 6.8 per cent at the end of 2023, at the same level as the year before. DNB meets the minimum requirement of 3 per cent by a good margin.

Capital requirements

The capital adequacy regulations specify a minimum primary capital requirement based on credit risk, market

risk and operational risk. In addition to meeting the minimum requirement, DNB must satisfy various buffer requirements (Pillar 1 and Pillar 2 requirements).

| | 2023 | 2022 |
|-----------------------------------|-------|-------|
| CET 1 capital ratio, per cent | 18.2 | 18.3 |
| Tier 1 capital ratio, per cent | 20.0 | 19.6 |
| Capital ratio, per cent | 22.5 | 21.8 |
| Risk exposure amount, NOK billion | 1 100 | 1 062 |
| Leverage ratio, per cent | 6.8 | 6.8 |

As the DNB Group consists of both a credit institution and a life insurance company, DNB has to satisfy a cross-sectoral calculation test to demonstrate that it complies with sectoral requirements: the capital adequacy requirement, in accordance with the CRR/CRD, and the Solvency II requirement. At year-end, DNB complied with these requirements by a good margin, with excess capital of NOK 38.1 billion.

Read more about capitalisation in the Group's Pillar 3 report, available on ir.dnb.no.

Segments

Financial governance in DNB is adapted to the different customer segments. The follow-up of total customer relationships and segment profitability are two important dimensions when setting strategic priorities and deciding on where to allocate the Group's resources. Reported figures reflect the Group's total sales of products and services to the relevant segments.

Pre-tax operating profit

NOK million

Total exposure

Portfolio composition by industry segment ¹

¹ Composition of exposure at default (EAD) in DNB's credit portfolio, calculated by using external credit conversion factors that are aligned with regulatory requirements. Figures are net values after impairment.

Personal customers

The segment includes the Group's more than 2 million personal customers in Norway. The personal customers segment recorded sound profitability in 2023, with a pre-tax operating profit of NOK 15 434 million and a return on allocated capital of 18.5 per cent. The profitability was driven by an increase in net interest income.

Net interest income increased by NOK 5 751 million from 2022, and the profitability shifted from loans to deposits due to the increase in NOK money market rates and lag effects from the repricing of customer loans and deposits. The combined spreads rose by 0.23 percentage points from the previous year. Average loans to customers grew by 4.9 per cent and deposits from customers rose by 4.0 per cent from 2022. The ratio of deposits to loans fell by 0.6 percentage points, to 61.1 per cent on average. Net other operating income was relatively stable from the 2022 figures. There was a positive development in revenues from payment services, fund sales and income from real estate broking activities, but the effects were counteracted by lower income from pension products.

Operating expenses rose by 8.7 per cent. The increase was mainly due to price- and wage inflation, the integration of Sbanken and the impairment of an IT system. Net impairment of financial instruments amounted to NOK 511 million in 2023, corresponding to 0.05 per cent of total lending to customers.

The market share of credit to households was 23.5 per cent at the end of 2023. The market share of total household savings amounted to 30.4 per cent, while the market share for savings in mutual funds amounted to 37.8 per cent at the year-end. DNB Eiendom improved its market share for the sale of existing homes from an average of 15.2 per cent in 2022 to 15.7 per cent in 2023.

DNB has an ambition to achieve continued profitable growth in the personal customers segment and will continue its efforts to adapt products, solutions, customer service and cost levels to the competitive situation of the future. Advising customers will continue to be a high priority in DNB, and advising about the green shift will be a focus area.

Developments in loans, deposits and net interest income

NOK billion

Corporate customers

Customer activity in the corporate customers segment was high throughout the year, despite geopolitical tensions and macroeconomic uncertainty. The segment had a sound profit and a 21.4 per cent return on allocated capital, up from 19.4 per cent in 2022. The profitability was mainly driven by a significant increase in net interest income from loans and deposits as well as sound operating income from other product areas. Following two years of net reversals of impairment of financial instruments, an increase in impairment provisions linked to some of the industry segments negatively affected the profit for the year.

Loans to customers increased by 9.6 per cent from 2022. The underlying volume growth, adjusted for exchange rate effects, was 0.6 per cent. Lending spreads were on average reduced from the previous year, partly due to lag effects from the increased interest rates in the SME segment and in the DNB Finans portfolio. Deposits from customers increased by 7.8 per cent in 2023 (0.3 per cent adjusted for exchange rate effects), resulting in a ratio of deposits to loans of 89.8 per cent at year-end. The ratio of deposits to loans has remained high for the last two years and is expected to gradually decrease to a more normalised level. Deposit spreads in 2023 were positively affected by increasing NOK money market rates, especially during the first three quarters of the year.

Net other operating income increased by 5.4 per cent from 2022 and amounted to NOK 11 371 million in 2023. The increase was mainly associated with net

commissions and fees, while net gains on financial instruments at fair value were reduced. Operating expenses increased by 10.6 per cent from 2022, mainly due to higher activity and a further strengthening of core competence. The increase was linked to higher income from the Markets area, personnel costs and IT costs.

In 2023, there were net impairment provisions of financial instruments of NOK 2 137 million, compared with net reversals of NOK 560 million in the previous year. The impairment provisions were mainly driven by specific customers in stage 3 spread across commercial real estate, retail industries and services, as well as by the legacy portfolio in Poland. The impairment provisions in 2023 were partly curtailed by net reversals from restructuring in oil, gas and offshore.

DNB is well positioned for continued profitable growth in the large corporate customers segment and for building further on its market-leading position in the SME segment, as well as for exploring new and existing profitable opportunities relating to the green transition. DNB's corporate customers segment has embedded the net-zero ambition in key sectoral strategies, and the transition plan that was launched in the fourth quarter of 2023 will further enable DNB to handle the challenges and opportunities presented by climate change and the transition to a low-carbon economy.

| <i>Income statement in NOK million</i> | 2023 | 2022 |

| | | |
|-------------------------|-------|-------|
| Net loans to customers | 108.9 | 105.6 |
| Deposits from customers | 65.5 | 52.0 |

Profits in the Other operations segment are affected by several Group items which vary from year to year.

Pre-tax operating profit was NOK 4 227 million in 2023. Risk management income increased from NOK 1 123 million in 2022 to NOK 2 114 million in 2023. The increase in income came from interest-rate trading and the bond portfolio.

For traditional pension products with a guaranteed rate of return, net other operating income reached a level of NOK 1 682 million in 2023, up NOK 480 million from 2022, primarily due to an increase in profit in the corporate portfolio. The net insurance service result was up NOK 93 million, to NOK 1 067 million in 2023, reflecting an increase in profits from paid-up policies.

DNB's share of the profit in associated companies (most importantly Luminor, Vipps and Fremtind) is also included in this segment. Contributions from associated companies were NOK 449 million, compared with NOK 746 million in 2022. The reduction was mainly due to a positive effect in 2022 from the merger between Vipps and MobilePay.

Corporate governance

The management of DNB is based on, among other things, the Norwegian Accounting Act and the Norwegian Code of Practice for Corporate Governance (the NUES Code of Practice). Sound corporate governance is DNB's 'licence to operate' and a prerequisite for creating long-term value for shareholders, and for ensuring sustainable business operations over time. Read more about this in the Board of Directors' report on corporate governance on page 35 and in the document Implementation of and reporting on corporate governance on ir.dnb.no.

Liability insurance has been entered into for the Board of Directors, to cover the legal liability that Board members and senior executives may face. The insurance covers any personal liability that Board members, deputy members and employees of DNB Bank ASA, including all subsidiaries, may incur. The insurance policy also covers the costs of processing any damages claims made, and documenting the facts related to these.

Risk management

The main purpose of risk management in DNB is to achieve an optimal balance between risk and earnings in a long-term perspective. Through sound risk management, the Group should always be able to identify, manage, monitor and report risks that have a bearing on DNB's target attainment. Analyses and stress tests that have been carried out during the year, both for specific portfolios and for the Group as a whole, have shown that DNB has good capital adequacy and the ability to withstand far greater losses than our loss forecasts are indicating. DNB participated in the biannual European Banking Authority (EBA) stress test along with 70 other European banks. The stress test indicated that DNB has a strong capital position and a good recovery capacity. Read more about developments in 2023 and about how DNB manages, measures and reports risks in the Group's risk and capital management report (the Pillar 3 report), as well as in the document Implementation of and reporting on corporate governance on ir.dnb.no and the Board of Directors' report on corporate governance on page 35.

Compliance

Ensuring compliance is one of DNB's strategic goals, and the fight against money laundering and financial crime is one of the Group's most important tasks in terms of its corporate responsibility. Read more about what the Group did in this area in 2023 under Financial crime from page 112 onwards, in the Board of Directors'

report on corporate governance on page 35 and in the document Implementation of and reporting on corporate governance on ir.dnb.no.

Employees and competence

The people who work in DNB are the Group's most important competitive advantage and a deciding factor in the bank's success. DNB ranks highly in surveys about Norway's most attractive employers among graduates and established business professionals, legal professionals and technologists. One of the Group's foremost characteristics is its competent employees with a strong commitment to their jobs. It is DNB's employees who create value by applying their knowledge and competence. In 2023, the Group continued its systematic efforts to ensure that it has the right competencies and to promote change capacity, adaptability and employee engagement. The sickness absence rate in DNB's Norwegian operations was 4.3 per cent in 2023. Read more about the Group's work on diversity and inclusion, including working conditions, as well as its efforts to ensure the right competencies, on page 97. More detailed information can be found in note G20 Salaries and other personnel expenses in the annual accounts.

New regulatory framework

Reduction in DNB's Pillar 2 requirement

Finanstilsynet (the Financial Supervisory Authority of Norway) carries out an assessment of DNB's risk and capital requirements (the Supervisory Review and Evaluation Process (SREP)) on a regular basis, normally once a year. As part of the SREP process, a decision is made on Pillar 2 requirements and Pillar 2 Guidance, which comes in addition to the minimum requirement and the overall buffer requirement under Pillar 1. In December 2023, DNB received a decision from Finanstilsynet, which applied from 31 December 2023, about a reduction of the Pillar 2 requirement for DNB from 2.1 per cent to 2.0 per cent of the total risk exposure amount. At least 56.25 per cent of the requirement must be met using CET1 capital, while 75 per cent must be covered by Tier 1 capital (CET1 or additional Tier 1). The new Pillar 2 requirement therefore reduced the total capital adequacy requirement by 0.1 percentage point, while the CET1 capital ratio requirement was reduced by 0.056 percentage point and the Tier 1 capital ratio requirement by 0.075 percentage point. The Pillar 2 Guidance was reduced from 1.5 per cent to 1.25 per cent of the total risk exposure amount. The new Pillar 2 requirement and the new Pillar 2 Guidance meant that Finanstilsynet's overall expectation of DNB's CET1 capital ratio was

reduced by 0.3 percentage point to 16.8 per cent at the end of 2023.

Entry into force of the Norwegian Act implementing the EU Taxonomy Regulation and the Sustainable Finance Disclosure Regulation (SFDR)

The new Norwegian Act relating to sustainable finance entered into force on 1 January 2023. The Act (available in Norwegian only) implements the EU Taxonomy Regulation for sustainable activities (the EU taxonomy) and the Sustainable Finance Disclosure Regulation (SFDR) in Norway. The EU taxonomy is a classification system for a set of common criteria for what can be considered environmentally sustainable (green) economic activities. The Taxonomy Regulation introduces a new reporting requirement for large non-financial corporations as well as for financial institutions. Banks are required to report on the proportion of loans granted to activities that are defined as green under the taxonomy (Green Asset Ratio). The EU taxonomy report for DNB for 2023 can be found on dnb.no/sustainability-reports.

The SFDR requires financial institutions whose business operations include portfolio management ('financial market participants') and financial advisers to provide information on how they integrate ESG risk into their risk assessments and investment advice. These financial market participants must also provide information on any adverse impacts of their investment decisions and/or investment advice on sustainability factors.

Implementation of the Corporate Sustainability Reporting Directive (CSRD) in Norway

In the autumn of 2022, the EU adopted the Corporate Sustainability Reporting Directive (CSRD), which includes a new set of rules for sustainability reporting. The aim of the new rules is to ensure better, more complete and more easily accessible information on companies' sustainability performance. The reporting requirement will apply to all major Norwegian companies and will be much more comprehensive and detailed than it is today. In Norway, more than 1 700 companies will be subject to a formal reporting requirement under the CSRD. Sustainability reporting under the CSRD must include information on the company's impact on sustainability factors and on how sustainability factors affect the company's development, performance and position. The topics for reporting include the company's plans for ensuring that its business model and strategy are compatible with the transition to a sustainable economy and the goals of the Paris Agreement. For the largest

listed companies, including DNB, the first reporting of this kind is due in 2025 (for the accounting year 2024). The Norwegian authorities aim to follow the same timeline as the EU, but there may be some delays in the Norwegian timeline. Part of the reporting is to be included in the Directors' report and must be available in a digital format. Independent assurance on the sustainability reporting must also be provided.

Entry into force of amendments to the Norwegian Lending Regulations on 1 January 2023

Until the end of 2022, banks factored in an interest rate increase of at least 5 percentage points when assessing customers' debt servicing capacity. This requirement changed on 1 January 2023, which means that banks should now base their decision on an interest rate increase of at least 3 percentage points. However, banks must still apply an interest rate of at least 7 per cent (meaning this will only have an effect when the lending rate is lower than 4 per cent). For fixed-rate loans, an interest rate increase is to be applied from the end of the fixed-rate period, as is the current practice. The loan-to-value ratio requirements set out in the Regulations (85 per cent for instalment loans and 60 per cent for lines of credit) and loan-to-income ratio (500 per cent) will be maintained at the present level. The flexibility quota for home mortgages will be maintained at 10 per cent (8 per cent in Oslo). For consumer loans, the quota will remain at 5 per cent. The Norwegian Lending Regulations, which are temporary rules that regulate the lending practices of financial institutions with regard to consumer loans, were extended until 2024. As of 1 July 2023, the regulations also cover loans secured by assets other than residential property, such as cars. Financial institutions are now allowed to grant loans with collateral in assets other than property for customers who do not meet certain requirements for debt-servicing capacity and maximum loan-to-income ratio. However, only up to 10 per cent of the loans granted each quarter may be loans of this kind. These changes in rules will result in stricter lending practices within the industry, but will not affect how DNB evaluates mortgage applications.

Counter-cyclical capital buffer maintained at current level

At its meeting on 1 November 2023, the Monetary Policy and Financial Stability Committee of the Norwegian central bank, Norges Bank, decided to maintain the counter-cyclical capital buffer requirement at 2.5 per cent. According to Norges Bank, the purpose of the counter-cyclical capital buffer is to help make banks more

resilient and to reduce the risk of them exacerbating a downturn in the economy.

Transparency regarding ownership and participation in the Annual General Meeting

As of 1 July 2023, a statutory registration date was introduced for companies registered with the Norwegian Central Securities Depository (VPS). This means that only shareholders who are registered as such five working days before the Annual General Meeting can participate and vote at the meeting. At the same time, new rules were introduced for shares managed by nominees and intermediaries.

Implementation of the Shareholder Rights Directive II (SRD II)

Amendment Regulations from the Norwegian Ministry of Finance entered into force on 1 July 2023 and implement the EU Shareholder Rights Directive II (SRD II) in Norwegian law. The Amendment Regulations lay down new provisions in the Norwegian Financial Institutions Act, the Norwegian Act on the Management of Alternative Investment Funds, the Norwegian Securities Funds Act and the Norwegian Securities Trading Act – and require that institutional investors and asset managers disclose their investment strategies and strategies for shareholder engagement. As part of the implementation of the SRD II and the work on transparency regarding ownership and participation in annual general meetings, rules have also been laid down on the duty of intermediaries to contribute to the identification of shareholders, the communication of information, the facilitation of the exercise of shareholder rights, the right to charge fees and the practice of the duty of confidentiality.

Amendments to the Securities Trading Regulations

The amendments to the Norwegian Securities Trading Regulations, which were laid down by the Norwegian Ministry of Finance and entered into force on 11 September 2023, allow companies outside the EEA to provide investment services directly to eligible counterparties in Norway, that is, without being established in the EU/EEA. This is important for ensuring flexibility in contract structures with large financial hubs outside the EU/EEA, such as London and New York.

Changes in the order of priority in the Financial Institutions Act

When the EU Banking Package was implemented in Norway on 1 June 2022, no specific legislative or regulatory amendments were proposed to ensure the

implementation of Article 48 (7) of the Bank Recovery and Resolution Directive (BRRD II). In the view of the Ministry of Finance, the wording of Article 48 (7) does not impose any obligation on the member states to establish a separate statutory priority class for 'legacy instruments' in the order of priority set out in Section 20-32 of the Norwegian Financial Institutions Act. The term 'legacy instruments' refers to capital instruments that have previously been treated as own funds, but that do not fulfil the conditions for being considered own funds under the Capital Requirements Regulation, and furthermore, which do not qualify as own funds under the transitional rules of the Regulation.

Increased systemic risk buffer requirement for banks using the standardised approach

In 2019, the Norwegian Ministry of Finance decided to increase the systemic risk buffer requirement from 3.0 to 4.5 per cent. The requirement entered into force at year-end 2020 for banks using the advanced IRB approach (A-IRB), and was initially meant to apply from the end of 2022 to other banks. In December 2022, the transitional rule was extended by one year, until year-end 2023, and the new requirement thus applied from 1 January 2024. The Swedish, Danish and Finnish authorities have all made decisions concerning reciprocity for the Norwegian systemic risk buffer (SyRB) requirement. Both Sweden and Denmark have decided to fully reciprocate the Norwegian SyRB, while the Finnish authorities have only recognised partial reciprocity, with a systemic risk buffer of 3.5 per cent on Norwegian exposures as of 1 July 2024.

Agreement in the EU on the implementation of Basel IV (CRR3/CRD6) – and implementation in Norway

On 6 December 2023, the EU countries approved the agreement on the implementation of the final parts of the Basel IV recommendations in the EU. The regulatory changes include a new standardised approach for calculating capital requirements for credit risk and a new capital requirement floor for banks using internal models, as well as new requirements for ESG risk assessments and enhanced supervision. The regulatory amendments for implementing Basel IV are set out in the CRR3 and the CRD6. This legislation has EEA relevance and the Ministry's goal is that the new standardised approach and the other amendments in the CRR3 will enter into force in Norway on the same date as in the EU, that is, from 1 January 2025, while the rules in the CRD6 will apply from mid-2025. The Ministry of Finance has given Finanstilsynet the task of preparing a consultation paper on the implementation of expected EEA rules corresponding to

those set out in the CRR3 and the CRD6. Finanstilsynet is also to assess the effects of the rules, and whether any options available to Norway, such as national regulatory measures, should be used, and if so, how.

Additional employer's national insurance contribution of 5.0 per cent for salaries above NOK 850 000

On 1 January 2023, an additional employer's national insurance contribution of 5 per cent was introduced for employees with an annual income of more than NOK 750 000. This fee applied to the part of the salary that exceeded NOK 750 000, and was described by the authorities as a measure adapted to the situation at the time and intended to contribute to covering the national budget for 2023. In connection with the national budget for 2024, a political decision was made to phase out the additional employer's national insurance contribution. As a first step in this process, from 1 January 2024, the threshold for this contribution will be raised from NOK 750 000 to NOK 850 000.

Macroeconomic developments

In 2023, the key policy rate rose in Norway, from 2.75 per cent at the beginning of the year to 4.50 per cent at the central bank's monetary policy meeting in December. The Norwegian krone weakened against the euro in the first quarter, from NOK 10.50 at the beginning of 2023 to NOK 12.00 at the end of May 2023. This weakening contributed to the Norwegian central bank, Norges Bank, raising the key policy rate by 0.5 percentage points at its meeting in June, rather than the warned increase of 0.25 percentage point. The Norwegian krone strengthened somewhat after this, but weakened again in the fourth quarter, and until the monetary policy meeting in December, it was somewhat weaker than forecast by the central bank. Norges Bank therefore decided to raise the key policy rate again in December, even though other central banks did not change their key policy rates. At the end of the year the EUR/NOK exchange rate was recorded at 11.22. Against the dollar, the Norwegian krone weakened from USD/NOK 9.80 at the end of 2022 to USD/NOK 10.17 at the end of 2023.

The growth in activity in the Norwegian economy slowed in 2023. Preliminary figures show that mainland GDP rose by 0.1 per cent in both the second and third quarters, compared with the previous quarter. Growth of about 1 per cent is expected for 2023, adjusted for changes in the number of business days. Petroleum-related industries have operated at close to full capacity, and parts of the service sector made substantial contributions

to growth during the past year. However, there was a pronounced decline in housing construction, and parts of the retail sector experienced a fairly sharp fall in activity from the high levels during the pandemic. In December 2023, consumer prices were 4.8 per cent higher than the same month a year earlier. Inflation showed a declining tendency throughout the year, but particularly low energy prices resulted in CPI growth of a mere 3.3 per cent on an annual basis in September 2023. Core inflation, measured by annual growth in the CPI-ATE, was 5.5 per cent in December, while growth from 2022 to 2023 was 6.2 per cent. While inflation in 2022 and into 2023 was largely linked to energy and import prices, wage growth and corporate margins became increasingly important for inflation in 2023. For 2023, the rise in wages and the rise in prices appeared to be similar. There are indications that inflation will decline in 2024 and real wages will rise somewhat. In addition, the interest rates of households may decline slightly in the second half of the year. If so, these developments combined will contribute to strengthening consumer demand and increasing the demand for homes. House prices, adjusted for seasonal variation, rose slightly through all of the three last months of 2023, but ended down by 0.3 per cent for the year as a whole, compared with 2022. However, there were considerable differences in developments in prices in different parts of the country. Total sales of used homes declined, but were at about the same level as in the years before the pandemic. Households' credit growth declined during 2023, and was 3.3 per cent year-on-year in November. By comparison, at the end of 2022, household credit growth was 4.1 per cent.

Future prospects

DNB aims to play a key role in supporting society, and the Group will continue to create value for its owners, customers and society as a whole, while remaining a safe and stable financial institution. At the same time, DNB's ambition is to be the bank that is best at taking advantage of the opportunities offered by new technology, new regulatory conditions and changed customer needs. DNB also aims to be the bank that is best at managing and adapting to change.

In addition to positive effects from increasing NOK interest rates and subsequent repricings, the following factors will contribute to reaching the return on equity (ROE) target: growth in loans and deposits, growth in commissions and fees from capital-light products, and cost control measures. The annual organic loan growth is expected to be between 3 and 4 per cent over time, but could be lower or higher in certain years. DNB has an

ambition to increase net commissions and fees by 4 to 5 per cent annually, and to maintain a cost/income ratio below 40 per cent.

The tax rate going forward is expected to be 23.0 per cent.

The current supervisory expectation for the common equity Tier 1 (CET1) capital ratio for DNB is 16.8 per cent. The target capital level set through DNB's capital planning is the supervisory exchange, and potential minor regulatory changes. The actual ratio achieved in 2023 was 18.2 per cent.

Share buy-backs, dividends and allocation of profits

Share buy-backs

The Annual General Meeting (AGM) in 2023 gave the Board of Directors an authorisation to repurchase up to 3.5 per cent of the company's share capital, as well as an authorisation to DNB Markets of 0.5 per cent for hedging purposes. Both authorisations are valid up to the AGM in 2024. Three share buy-back programmes totalling 3.25 per cent were announced in 2023. At the end of December 2023, 25 774 725 shares were repurchased, corresponding to 2.53 per cent of the share capital, when taking into account redemption of the proportional share owned by the Norwegian government.

Dividends

DNB's Board of Directors has approved a dividend policy which aims to provide an attractive and competitive return for shareholders through a combination of increases in the share price and dividend payments. The Group is to have a dividend ratio of more than 50 per cent in cash dividends and has an ambition of increasing the nominal dividend per share each year. In addition to dividend payments, repurchases of own shares will be used as a flexible tool for allocating excess capital to DNB's owners. DNB is well capitalised and has a 1.4 percentage-point headroom above the supervisory authorities' current capital level expectation. The Board of Directors has thus proposed a dividend of NOK 16.00 per share for 2023, for distribution from 8 May 2024. The proposed dividend for 2023 gives a dividend yield of 18.7 cent based on a share price of NOK 216 as at 31 December 2023, which means that DNB Bank ASA will distribute a total of NOK 24 153 million in dividends for 2023. This corresponds to a payout ratio of 63 per cent of the Group's profits, or 91 per cent when the announced share buy-backs of 3.25 per cent are included.

Allocations

DNB Bank ASA recorded a profit of NOK 39 316 million in 2023, compared with a profit of NOK 30 768 million in 2022. The Board proposes a Group contribution of NOK 8 200 million with tax effect to DNB Boligkreditt AS, and at the same time DNB Boligkreditt AS will pay NOK 9 050 million (without tax effect) as a Group contribution to DNB Bank ASA. A Group contribution of NOK 180 million to Ocean Holding AS with tax effect is also proposed.

The Board of Directors is of the opinion that, after the dividend payment of NOK 16.00 per share for 2023, the Group will have adequate financial strength and flexibility to provide sufficient support to operations in subsidiaries and meet the Group's expansion requirements and changes in external parameters.

1. Corporate information

DNB Bank ASA is a Norwegian public limited company listed on the Oslo Stock Exchange (Oslo Børs). The consolidated financial statements for 2023 were approved by the Board of Directors on 13 March 2024.

The DNB Group offers banking services, securities and investment services, real estate broking services, insurance and asset management services in the Norwegian and international retail and corporate markets.

The visiting address to the Group's head office is Dronning Eufemias gate 30, Bjørvika, Oslo, Norway.

2. Basis for preparation

DNB has prepared the consolidated financial statements for 2023 in accordance with IFRS® Accounting Standards as issued by the International Accounting Standards Board (IASB) and endorsed by the European Union (EU).

The consolidated financial statements are based on the historic cost principle, with the exception of financial assets and liabilities measured at fair value and investment properties. The consolidated financial statements are presented in Norwegian kroner. Unless otherwise specified, all amounts are rounded to the nearest million.

The Group's consolidated balance sheets are primarily based on an assessment of the liquidity of the assets and liabilities.

3. Changes in accounting principles

The following changes in accounting principles were adopted with effect from 1 January 2023:

IFRS 17

IFRS 17 is the new standard for insurance contracts that replaces IFRS 4 Insurance Contracts. The DNB Group has applied IFRS 17 from 1 January 2023. The implementation of the new standard involves significant changes to the Group's accounting for insurance and reinsurance contracts. At the same time, the Group has changed its classification of some financial instruments under IFRS 9. IFRS 17 requires comparative figures for 2022.

The new IFRS 17 rules entail a new measurement method for the Group's life insurance liabilities, whereby estimated future cashflows in the insurance contracts are discounted using a marked-based interest rate. This affects the transition effect as at 1 January 2022, recognised liabilities and future profit and loss. There are also changes from the previous presentation in the income statement, as operating expenses relating to insurance contracts under the new rules are included in net operating income, whereas they were previously presented under operating expenses. The transition disclosures are presented under Section 17, Transition to IFRS 17.

Owner-occupied property

Buildings that are owned by DNB Livsforsikring as part of the company's common portfolio and are used by the Group for its own operations have previously been recognised according to the revaluation model. On implementation of IFRS 17, DNB has chosen to measure owner-occupied property using the fair value model, in accordance with IAS 40.

Amendments to IAS 12

The amendments give companies temporary relief from accounting for deferred taxes arising from the Organisation for Economic Co-operation and Development's (OECD) international tax reform. The OECD published the Pillar Two model rules in December 2021 to

ensure that large multinational companies would be subject to a 15 per cent minimum tax rate. More than 135 countries and jurisdictions representing more than 90 per cent of global GDP have agreed to the Pillar Two model rules. See note G24 Taxes for further information.

Cash flow statement

As of 1 January 2023, the DNB Group presents the line items "Receipts on issued bonds and commercial paper", "Payments on redeemed bonds and commercial paper", "Interest paid" and "Interest received" as cash flow from operating activities in the cash flow statement. The changes are reflected in the comparative figures.

4. Consolidation

The consolidated financial statements for DNB Bank ASA ("DNB" or "the Group") include DNB Livsforsikring AS and DNB Asset Management Holding AS, all including subsidiaries.

The accounting principles are applied consistently when consolidating ownership interests in subsidiaries and are based on the same reporting periods as those used for the parent company.

When preparing the consolidated financial statements, intra-group transactions and balances, along with gains and losses on transactions between group units, are eliminated.

Associated companies and joint ventures

Associated companies and joint ventures are accounted for using the equity method, where the DNBs share of profits/losses are based on the companies' net profit adjusted for DNB's economic interest. The share of profits/losses from associated companies and joint ventures are presented as "Profit from investments accounted for by the equity method". The carrying value of the investment is presented as "Investments accounted for by the equity method" in DNBs balance sheet.

Conversion of transactions in foreign currency

Balance sheet items of foreign branches and subsidiaries in other currencies than Norwegian kroner are translated into Norwegian kroner according to the exchange rates prevailing on the balance sheet date, while profit or loss items are translated according to average exchange rates.

5. Segment information

Financial governance in DNB is adapted to the different customer segments. The follow-up of total customer relationships and segment profitability are two important dimensions when making strategic priorities and deciding where to allocate the Group's resources. Reported figures for the various segments reflect the Group's total sales of products and services to the specific segment.

All of the Group's customer activities are divided among the operating segments, along with the related balance-sheet items, income and expenses.

Excess liquidity and liquidity deficits in the operating segments are placed in or borrowed from the Group Treasury at market terms, where interest rates are based on duration and the Group's financial position.

When operating segments cooperate on the delivery of financial services to customers, internal deliveries are based on market prices.

Services provided by group services and staff units are charged to the operating segments in accordance with service agreements. Joint expenses which are indirectly linked to activities in the operating segments, are charged to the operating segments on the basis of distribution formulas.

A number of key functions and profits from activities not related to the operating segments' strategic operations are presented within Other operations. This item comprises income and expenses relating to the Group's liquidity management, income from investments in equity instruments not included in the trading portfolio, interest income assigned to the Group's unallocated capital, ownership-related expenses and income from the management of the bank's real estate portfolio.

Net profits from repossessed operations which are fully consolidated in the Group are presented as "Profit from repossessed operations" in the segment reporting. The effect of consolidation of the repossessed companies is presented within Other operations.

6. Recognition in the income statement

Interest income is recognised using the effective interest method. This implies that interest is recognised when incurred, with the addition of amortised front-end fees and any other fees which are regarded as an integral part of the effective interest rate.

The effective interest rate is set by discounting contractual cash flows based on the expected life of the asset. Cash flows include front-end fees and direct transaction costs which are not paid directly by the customer.

Interest is recognised according to the effective interest method with respect to both balance sheet items measured at amortised cost and balance sheet items measured at fair value in the income statement, with the exception of front-end fees on loans at fair value, which are recognised when earned. Interest on impaired loans ("stage 3") corresponds to the effective interest rate on the book value, net of impairment.

"Net other operating income" includes, among others, fees and commissions relating to money transfers, financial guarantees, asset management services including performance/success fees, credit broking, real estate broking, corporate finance, securities services and sale of insurance products. Credit broking commissions include syndication income in the form of fees and commissions from transactions where DNB arranges the loans without retaining parts of the loan itself or participates in a loan syndicate and receives compensation in excess of the effective interest received by the other participants. Fees that are not included in the effective interest rate calculation, as well as commissions, are recognised over time when the services are rendered or at point in time when the transactions are completed.

Variable performance/success fees are only recognised to the extent it is highly probable that a significant reversal of the amount of cumulative revenue will not occur.

Fees related to credit broking, real estate broking and corporate finance services include issuing services, are recognised when the transactions are completed.

7. Financial instruments

Recognition and derecognition

Initial recognition

Financial assets are recognised in the balance sheet either on the trade date or the settlement date. Trade date accounting is applied for financial assets measured at fair value through profit or loss, while settlement date accounting is applied for financial assets measured at amortised cost.

Financial liabilities are recognised in the balance sheet on the date when the Group becomes a party to the contractual provisions of the instrument.

Derecognition of financial assets

Financial assets are derecognised when the right to receive and retain cash flows from the asset has expired or been transferred, and also if modifications lead to derecognition. The Group enters

into certain transactions where it transfers assets recognised on its balance sheet, but retains either all or parts of the risks and rewards of the transferred asset. If all or substantially all of the risks and rewards are retained, the transferred financial asset is not de-recognised from the balance sheet.

A modification will lead to derecognition if the modification is substantial. A substantial modification is defined as a full credit process, a pricing decision and the signing of a new contract. A modification resulting from a distressed restructuring will in most cases not result in de-recognition and recognition of a new financial instrument as the modified cash flows normally reflect the expected cash flows before restructuring.

Derecognition of financial liabilities

Financial liabilities are derecognised when the contractual obligations have been discharged, cancelled or have expired.

Repurchase and reverse repurchase agreements

DNB enters into repurchase agreements where securities may be lent or sold, subject to a commitment to repurchase them at a fixed price and at a predetermined date. Such securities are not derecognised, and they are in addition included separately as collateral pledged for corresponding liabilities.

Similarly, where the Group borrows or purchases securities subject to a commitment to resell them (reverse repurchase agreement), the securities are not recognised in the balance sheet.

Securities borrowing and lending agreements

Securities borrowing and lending transactions are entered into on a collateralised basis. Cash collateral delivered is derecognised from the balance sheet and a corresponding receivable is recognised. Cash collateral received is recognised in the balance sheet and a corresponding liability to return it, is recognised. Securities lent remain on the balance sheet and are in addition reported as pledged assets. Borrowed securities are not recognised as assets. When borrowed securities are sold, an amount corresponding to the fair value of the securities is booked as a liability. Securities received in a borrowing or lending transaction are disclosed as liabilities.

Classification and presentation

Financial assets are classified in one of the following measurement categories:

- amortised cost
- fair value through other comprehensive income (FVOCI)
- fair value through profit or loss (FVTPL)

The classification of financial assets depends on two factors:

- the business model of the portfolio to which the financial asset belongs
- the contractual cash flow characteristics of the financial asset

When determining the business model, the Group assesses at portfolio level how the business is managed, sales activities, risk management and how information is provided to the executive management. The business model assessment has been performed for each business area. The portfolios belonging to the customer areas are held within a business model whose objective is to hold the assets and collect the contractual cash flows, while there are several different business models for the portfolios belonging to the product area Markets and the support area Group Treasury.

A contractual cash flow characteristics test is performed on initial recognition of financial assets. Financial assets with cash

flows that are solely payments of principal and interest (SPPI) pass the test if the contractual cash flows are consistent with a basic lending arrangement. In a basic lending arrangement, consideration for the time value of money and credit risk are typically the most significant elements of interest.

Financial liabilities are classified at amortised cost, except for financial liabilities that are required to be measured at fair value through profit or loss or designated at fair value through profit or loss.

Financial assets may irrevocably be designated at fair value through profit or loss on initial recognition if the following criterion is met:

- The classification eliminates or significantly reduces measurement or recognition inconsistency that otherwise would arise from measuring financial assets or recognising the gains and losses on them on different bases.

Financial liabilities may also irrevocably be designated at fair value through profit or loss on initial recognition if the criterion above is fulfilled or one of the following:

- The financial instruments are part of a portfolio that is managed and evaluated on a fair value basis, in accordance with a documented risk management or investment strategy.
- The host contract contains one or more embedded derivatives.

Financial assets measured at amortised cost

Financial assets, which are not designated at fair value through profit or loss, are measured at amortised cost if both of the following conditions are met:

- The assets are held within a business model whose objective is to hold the asset to collect the contractual cash flows.
- The contractual cash flows represent solely payment of principal and interest.

Financial assets measured at amortised cost are initially recognised at fair value plus any directly attributable transaction costs. Subsequently the assets are measured at amortised cost using the effective interest method, less impairment. Impairment losses and reversals are measured based on a three-stage expected credit loss model. This model is described under Expected credit loss measurement.

A change in expected credit loss allowance for financial assets measured at amortised cost on the balance sheet date is presented under "Impairment of financial instruments" in the income statement.

Interest income on financial instruments classified in this category is presented under "Interest income, effective interest method".

This category mainly comprises loans to customers, cash and deposits, receivables, reverse repurchase agreements and bond investments.

Financial liabilities measured at amortised cost

Financial liabilities measured at amortised cost are initially recognised at fair value minus any directly attributable transaction costs. Interest expenses on such instruments are presented under "Interest expenses, effective interest method".

This category includes deposits from customers and credit institutions, repurchase agreements, issued commercial paper and bonds, subordinated loan capital and perpetual subordinated loan capital securities.

Financial assets measured at fair value through other comprehensive income

Investments in financial assets, which are not designated at fair value through profit or loss or amortised cost, are measured at fair

value through other comprehensive income if both of the following conditions are met:

- The assets are held within a business model whose objective is to both hold the asset to collect the contractual cash flows and to sell the asset.
- The contractual cash flows represent solely payment of principal and interest.

At initial recognition, financial assets measured at fair value through other comprehensive income are recognised at fair value plus any directly attributable transaction costs. Subsequent measurement is at fair value through other comprehensive income. Changes in fair value are recognised in other comprehensive income and accumulated within a separate component of equity. Impairment losses or reversals, interest income and foreign exchange gains or losses are recognised in profit or loss. When the financial asset is derecognised, the cumulative gain or loss recognised in other comprehensive income, is recycled over profit or loss and recognised in "Net gains on financial instruments at fair value". Impairment losses and reversals are measured based on a three-stage expected credit loss model, which is described under Expected credit loss measurement.

This category comprises a portfolio of bond investments.

Financial instruments measured at fair value through profit or loss

The following instruments are recognised in this category:

- derivatives
- equity instruments
- financial instruments held for trading
- financial assets managed at fair value
- financial instruments designated at fair value through profit or loss on initial recognition
- financial assets with contractual cash flows that do not represent solely payment of principal and interest

Instruments in this category are initially recognised at fair value, with transaction costs recognised in profit or loss as they occur. Subsequent measurement is at fair value with gains and losses recognised in the income statement.

Changes in the fair value of the financial instruments are presented under "Net gains on financial instruments at fair value" in the income statement. Changes in the fair value of financial instruments within life insurance are presented under the line item "Net insurance result". Financial derivatives are presented as an asset if the fair value is positive and as a liability if the fair value is negative.

Interest income and interest expenses from interest-bearing financial instruments, including financial derivatives, are presented under "Net interest income", except for interest income and interest expenses from financial instruments belonging to the trading portfolio.

The trading portfolio consists of instruments, which are acquired primarily for the purpose of selling or repurchasing in the short term. This includes financial derivatives, shareholdings and bond portfolios. Interest income and interest expenses from financial instruments belonging to the trading portfolio are presented as "Net gains on financial instruments at fair value".

Financial assets designated at fair value through profit or loss on initial recognition, mainly consist of bonds and fixed-rate mortgage loans in Norwegian kroner.

Financial liabilities designated at fair value through profit or loss on initial recognition mainly consist of fixed-rate securities issued in Norwegian kroner. The change in fair value related to

changes in the Group's credit risk is calculated using relevant credit spread curves from Nordic Bond Pricing. Fair value of changes in credit risk on other financial liabilities is limited due to the short-term nature of the instruments. Changes in fair value due to credit risk on the DNB Group's long-term borrowings in Norwegian kroner designated at fair value through profit or loss do not create or enlarge an accounting mismatch and are therefore separated and recognised in other comprehensive income. Refer to the statement of changes in equity for a presentation of the effects.

Reclassifications

Financial assets are only reclassified when there is a significant change in the business model for those assets. Such changes are expected to be very infrequent. Financial liabilities are not reclassified.

Financial instruments with the characteristics of equity

Issued additional Tier 1 capital instruments are instruments where DNB has a unilateral right not to repay interest or the principal to the investors. As a consequence of these terms, the instruments do not meet the requirements for a liability and are therefore presented within the line "Additional Tier 1 Capital" within the Group's equity. Transaction expenses and interest are presented as a reduction in "Other equity".

Equity in foreign currency shall be converted to Norwegian kroner based on the exchange rate on the transaction date and is not subject to subsequent revaluation. Additional Tier 1 Capital in foreign currency is thereby only revalued on redemption.

Offsetting

Master netting agreements, collateralised positions or similar agreements give the right to offset in the event of default. Such agreements reduce the Group's exposure in the event of default, but do not on their own qualify for offsetting in accordance with IFRS, as there also needs to be an intention to settle the contractual cash flows net on an ongoing basis. See note G29 Offsetting for details about the financial assets and financial liabilities subject to offsetting agreements.

Determination of fair value

Fair value is the price that would be received by selling an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Financial assets and liabilities in active markets are measured at the price within the bid-ask spread that is most representative of the fair value at the measurement date. In most cases bid or asking prices for these instruments are the most representative price for assets and liabilities respectively.

Financial instruments measured at fair value are valued on a daily basis with the exception of a few financial instruments that are valued on a monthly or quarterly basis. As far as possible, directly observable market prices are used. Valuations of the various types of financial instruments are based on well-acknowledged techniques and models. The prices and input parameters used are controlled and assessed based on established routines and control procedures.

The control environment for fair value measurement of financial instruments is an integrated part of the company's financial reporting. A number of controls are carried out on a daily basis, including controls of the day-one gains or losses on traded positions and controls of the key input parameters in the valuation. At the end of each month and quarter, extended controls are carried out to ensure that the valuations are consistent with the accounting policy for fair value including variation analyses.

Special emphasis is placed on valuations in the level 3 in the valuation hierarchy, where the effects may be significant or particularly challenging.

Instruments traded in an active market

With respect to instruments traded in an active market, quoted prices are used, obtained from a stock exchange, a broker or a price-setting agency.

A market is considered active if it is possible to obtain external, observable prices, exchange rates or interest rates and these prices represent actual and frequent market transactions.

Some investments in equities and commercial paper and bonds are traded in active markets.

Instruments not traded in an active market

Financial instruments not traded in an active market are valued according to different valuation techniques and are divided into two categories:

Valuation based on observable market data:

- recently observed transactions in the relevant instrument between informed, willing and independent parties
- instruments traded in an active market which are substantially similar to the instrument that is valued
- other valuation techniques where key parameters are based on observable market data

Valuation based on other factors than observable market data:

- estimated cash flows
- valuation of assets and liabilities in companies
- models where key parameters are not based on observable market data
- possible industry standards

In the valuation of OTC-derivatives, a fair value adjustment is made for the counterparty's credit risk (CVA) and for the Group's own credit risk (DVA). In addition, an adjustment is made for expected funding costs (FVA). Adjustments are made based on the net exposure towards each counterparty for CVA and DVA, and towards a funding netting set for FVA.

The Group estimates CVA as a function of a simulated expected positive exposure, the counterparty's probability of default (PD) and loss given default (LGD). Internal ratings are combined with historical credit default swap (CDS) spreads as well as current CDS index prices to arrive at the counterparty's estimated CDS spreads. This means that the Group uses its own credit models and their discriminatory power, but calibrates against pricing levels for similar credit risk in the market. For customers classified in stage 3 due to the expected credit loss impairment, CVA is calculated as if the derivatives were loans subject to impairment because of credit losses. The DVA is based on the same approach as for CVA, using an assessment of DNB's credit spread.

FVA reflects the estimated present value of the future funding costs associated with funding uncollateralised derivative exposures. It is calculated by applying a market funding spread to the expected exposure. Funding benefits are not estimated for positions for which DNB calculates DVA.

For financial instruments measured by using valuation techniques, a gain or loss might from time to time occur at initial recognition when the estimated fair value is different from the actual transaction price. When the measurement is based on non-observable input parameters (level 3), the gain or loss is deferred and therefore not recognised at day one. Fair value changes in later

periods are only recognised to the extent the change is caused by factors that market participants would take into account.

Expected credit loss measurement (ECL)

Impairment is measured using the expected credit loss model on the following instruments that are not measured at fair value through profit or loss:

- financial assets that are debt instruments
- lease receivables
- issued financial guarantee contracts
- loan commitments

ECL related to undrawn portions of loan commitments is recognised in the line item "Provisions" in the balance sheet.

Please refer to note G5 Measurement of expected credit loss for more information on the accounting principles and methodology for estimating expected credit loss.

Hedge accounting

The Group applies hedge accounting according to IFRS 9 Financial instruments.

In the DNB Group both derivative and non-derivative instruments are used to manage exposures to interest rate risk and foreign exchange risk. Fair value hedge accounting is applied to hedges of interest rate risk on issued debt in foreign currency and a portfolio of bond investments. Net investment hedge accounting is applied to foreign currency exposure of investments in foreign operations. See note G15 Financial derivatives and hedge accounting for more information.

Fair value hedge of interest rate risk

DNB uses interest rate swaps to hedge against changes in fair value of fixed-rate issued bonds and subordinated debt in foreign currency, as well as a portfolio of bond investments, caused by movements in market interest rates. Securities and liabilities are hedged 1:1 through external contracts where there is an economic relationship between currencies, interest rate flows and the hedging transaction. The hedges are entered into at the same time as the debt is issued in order to achieve a match in the terms of the derivative and the debt instrument. For bond investments, the hedge is also entered into at the same time as the investment is made.

Fair value hedge accounting is applied to the economic hedge relationships that qualify for hedge accounting. When hedge accounting is applied, there is a qualitative assessment of the economic relationship between the debt instrument or bond investment and the derivative that is documented at the inception of the hedge. Thereafter, it is periodically assessed whether the derivatives designated as hedging instruments continue to be effective in offsetting changes in fair value of the hedged item.

DNB's fair value hedges of interest rate risk on issued debt and bond investments are expected to be highly effective. However, hedge ineffectiveness can arise if the terms of the derivative and the debt instrument are not fully aligned.

Hedging instruments are measured at fair value in the balance sheet and changes in the fair value are presented under "Net gains on financial instruments at fair value" in the income statement. Interest income and expense from financial instruments designated as hedging instruments are presented as "Net interest income". Derivatives used for hedging are further specified as "Financial derivatives, hedging" in note G19 Net gains on financial instruments at fair value.

With respect to hedged commercial paper, bonds and financial liabilities, the hedged risk is measured at fair value. For instruments measured at fair value through other comprehensive in-

come, the gains and losses due to the hedged risk is presented under "Net gains on financial instruments at fair value". The unhedged risk is presented in other comprehensive income. Any changes in the fair value due to the hedged risk for liabilities measured at amortised cost are presented under "Net gains on financial instruments at fair value".

If the hedge relationship ceases to meet the hedge effectiveness requirements, the hedging relationship is discontinued and the accumulated change in fair value of the hedged item is amortised over the remaining time to maturity.

Net investment hedge of investments in foreign operations

DNB hedges investments in foreign subsidiaries to eliminate or reduce the foreign currency exposure that arises when a subsidiary has a different functional currency from that of the Group. The carrying amount of the investment varies as a result of fluctuations in spot exchange rates between the functional currency of the subsidiaries and the Group's functional currency. This risk is hedged, since it may have significant financial impact on the Group's financial statements.

Foreign currency borrowings are used as hedging instruments. At the inception of the hedge, there is a qualitative assessment of hedge effectiveness. Hedge designations are reassessed on a quarterly basis. Hedge effectiveness is periodically assessed by comparing changes in the carrying amount of the foreign currency borrowings that are attributable to a change in spot rate, with changes in the investment in the subsidiary due to movement in the spot rate. The hedges are expected to be highly effective, since the investments are usually hedged with instruments in the same currency and with an amount corresponding to the size of the designated investment.

Gains or losses after taxes on the hedging instruments are recognised directly in the Group's equity and presented in the statement of changes in equity as a part of "Net currency translation reserve" and in the comprehensive income statement as "Hedging of net investment".

If a foreign operation is disposed of, the cumulative gains or losses of the hedging instruments recognised in equity is reclassified to the income statement.

8. Investment property and fixed assets

Properties held to generate profits through rental income or for an increase in value, are presented in the balance sheet as investment property. Properties which are mainly used for own operations, are presented as owner-used properties.

Other tangible assets are presented as fixed assets in the balance sheet, and are measured at cost less accumulated depreciation and impairment losses.

On initial recognition, investment properties and owner-used properties are measured at cost including acquisition costs.

In subsequent periods, investment properties are measured at fair value by discounting the expected net future cash flows to its present value. Therefore, no annual depreciation is made on an investment property. Internal and external expertise is used for valuations. A selection of external appraisals are obtained and compared with internal valuations for control purposes. In addition, analyses are made of changes from the previous period, as well as sensitivity analyses of key assumptions which are included in the overall evaluation of the fair value measurement. Providers of valuations are also followed up on an ongoing basis through dialogue and enquiries concerning the valuation of individual properties. Changes in fair value of investment property within life insurance are recognised within the line item "Net insurance result". Changes in fair value of other investment property in the Group are presented within the line item "Net gains on investment property" in the income statement.

9. Intangible assets

DNB's intangible assets primarily consists of goodwill, which is recognised at cost. Goodwill is the residual value consisting of the difference between the purchase price and the capitalised value of an acquired company. The concept of goodwill comprises payment for synergy gains, assets related to employees, other intangible assets that do not qualify for recognition as a separate item, future superprofit and the fact that deferred tax cannot be discounted. Capitalised goodwill derives solely from acquisitions.

Goodwill is tested for impairment at a minimum once a year. DNB has chosen to perform the annual test in the fourth quarter. The recoverable amount in the goodwill impairment test is based on a value in use calculation, where DNB discounts expected future cash flows for each cash-generating unit. The calculations are based on historical results and plan figures approved by management.

Other intangible assets are measured at cost less accumulated amortisation and impairment losses.

10. Insurance contracts

Insurance contracts are contracts under which the Group accepts significant insurance risk from a policyholder by agreeing to compensate the policyholder if a specific uncertain future event adversely affects the policyholder. Investment contracts with discretionary participation features are also classified as insurance contracts. In the Group, insurance contracts are held by the wholly owned subsidiary DNB Livsforsikring (a life insurance company).

Products offered by DNB Livsforsikring that are classified as insurance contracts include traditional guaranteed products (defined-benefit pensions, paid-up policies, old individual products and defined-benefit accounts), risk pensions and employer's liability insurance. Insurance contracts are presented as "insurance liabilities" in the balance sheet. In addition, reinsurance contracts are used to mitigate the risk exposure. These contracts are presented as "insurance liabilities" or "other assets" in the balance sheet.

Several investment contracts (including unit link contracts) and defined contribution pensions in DNB Livsforsikring are not classified as insurance contracts. These contracts are classified and measured as financial instruments (IFRS 9).

Measurement model

The main features of the general measurement model (GMM) for measurement of insurance liabilities are:

- The fulfilment cash flow constitutes an estimate of the present value of future cash flows including a risk adjustment for non-financial risk. The calculations are made for a group of insurance contracts.
- The liabilities include an estimated addition for a contractual service margin (CSM), which constitutes the unearned profit element in the insurance contracts. The CSM is recognised in the income statements over the coverage period of the insurance contracts.
- Certain changes in the estimate for the present value of future cash flows and risk adjustment for non-financial risk are adjusted against the CSM and recognised in the income statement over the remaining coverage period covered by the relevant contracts. The effect of changes in the time value of money and other financial risk which do not adjust the CSM are presented in the income statement. DNB has chosen not to apply the OCI option allowed under IFRS 17.

Risk pensions are measured according to the GMM.

The variable fee approach (VFA) is a variant of the GMM and applies to insurance contracts with direct participation features

(contracts with a significant element of investment-related services relating to the return on the underlying items). Underlying items comprise specified portfolios of investment that determine amounts payable to policyholders. The management uses judgement to assess whether the criteria for using the VFA are met, where relevant participating features, including profit sharing between contracts, are taken into consideration. Under the VFA, the estimated future variable fee, which includes some changes in the discount rate and other financial variables, will also adjust the CSM. The VFA products have an investment component. When considering if products have an investment component, relevant participating features, including profit sharing between contracts, are taken into account.

The VFA is used for the majority of the life insurance products, including the traditional guaranteed products.

The premium allocation approach (PAA) is an optional simplified measurement model, mainly for short-term contracts with a coverage period of up to 12 months. Insurance liabilities in the PAA are initially recognised as the received insurance premiums. This approach is used for employer's liability insurance and reinsurance. DNB has for PAA chosen to expense acquisition cash flows when incurred. The liability for incurred claims in PAA is adjusted for the time value of money and the effect of financial risk.

The measurement of the insurance liabilities is updated based on current assumptions at the end of each reporting period, including the updated discount rate.

Fulfilment cash flows

Fulfilment cash flows include amounts the Group expects to collect from premiums and payout for claims, benefits and expenses. The estimates take into account an explicit adjustment for non-financial risk and are based on conditions on the balance sheet date. To calculate future cashflows under insurance contracts, the cashflows used in the Solvency II Directive are used as the basis for the calculations, with some adjustments. The estimates will among other things include stochastic modelling (risk-neutral methods) to measure financial options and guarantees.

The risk adjustments for non-financial risk, mainly related to the risk of disability and life expectancy, are calculated based on the same methods as for the risk margin under Solvency II, but to some degree with different assumptions. The calculated risk adjustment corresponds to the confidence level of 88 per cent.

Discount rate

The method used for calculating the marked-based discount rate is based on a bottom-up approach. The risk-free interest rate is derived using the Norwegian swap rate for the first ten years. It is adjusted for credit risk by applying the same method as when determining the Solvency II Directive yield curve. After ten years, the yield curve is extrapolated to a forward rate according to the Smith-Wilson method. An illiquidity premium for the whole term is added under the assumption that the liabilities are illiquid throughout the period.

Level of aggregation

The insurance contracts are divided into groups of contracts. A portfolio comprises contracts subject to similar risks and managed together. The portfolio will be further divided into profitability buckets and annual cohorts. For contracts measured using VFA the "carve-out" exemption endorsed by the EU for annual cohorts are applied.

Contract boundary

The Group uses the concept of contract boundary to determine what cash flows should be considered in the measurement of groups of insurance contracts. For most of the traditional

guaranteed products the contract boundaries are assessed to be long term, which means that all future premiums are included in the cash flows. Risk pensions, defined-benefit accounts and employer's liability insurance have a one-year contract boundary. Reinsurance has a three-month contract boundary.

Recognition in the income statement

The line item "Net insurance result" includes both insurance service result and finance result, life insurance.

Insurance service result includes the following components:

- Insurance revenue, including the release of CSM and risk adjustment during the period.
- Insurance service expense, including operating expenses related to insurance contracts.
- Net revenue/ expense from reinsurance contracts during the period.

Finance result, life insurance includes the following components:

- Investment income from underlying assets or pool of assets, measured at fair value.
- Insurance finance income or expenses.
- Reinsurance finance income or expenses.

The release of CSM in the income statement is determined by the allocation of the CSM at the end of the reporting period over the current and expected remaining coverage period of the group of insurance contracts, based on coverage units. The coverage period is the period during which the entity provides insurance contract services. Insurance contract services include coverage for an insured event, investment-return services and investment-related services where relevant. Coverage units for the group are determined by considering the quantity of the benefits for each contract and its expected coverage period. The quantity of the benefits for investment-return and investment-related service are assets under management, and for an insured event it is expected benefits paid. The relative weighting of the benefits each reporting period for traditional guaranteed products is based on the maximum guarantee rate and expected return on assets in the period, compared with expected benefits paid. The Group has chosen to discount coverage units using the same discount rate as when discounting cash flows.

For the release of the CSM, each quarter is treated as a discrete interim reporting period.

Changes that are related to current or past services are recognised in the income statement and changes that are related to future services are recognised by adjusting the CSM.

The release of risk adjustment is based on developments in the cost of capital for each period. The whole change of the risk adjustment, including the finance effect, is included in the insurance services result.

Expected and actual repayments of the investment component under VFA will not be part of insurance revenue and insurance service expenses.

Onerous contracts are recognised immediately as a loss in insurance service expense.

For contracts measured under VFA, the finance result will be close to zero, because insurance finance income or expenses comprise changes in the fair value of underlying items (excluding additions and withdrawals) which will be about the same as the investment income from the underlying assets measured at fair value.

11. Income tax

Taxes for the year comprise payable taxes for the financial year, any payable taxes for previous years and changes in deferred taxes on temporary differences. Temporary differences are differences between the carrying amount of an asset or liability and the taxable value of the asset or liability.

The temporary differences are mainly related to changes in fair value of financial assets, financial liabilities and investment properties, pensions, depreciations of fixed assets and properties, and impairment of goodwill. Deferred taxes on investment properties are calculated based on the expectation that the value is recovered through sale of the property. Deferred taxes are calculated on the basis of tax rates and tax rules that are applied on the balance sheet date or are highly likely to be approved and are expected to be applicable when the deferred tax asset is realised or the deferred tax liability settled.

The Group recognises liabilities related to the future outcome of tax dispute based on estimates of changed income taxes. When assessing the recognition of uncertain tax liabilities it is considered if the liability is probable.

Deferred tax assets are recognised in the balance sheet to the extent that it is probable that future taxable income will be available against which they can be utilised. Deferred taxes and deferred tax assets within the same tax group are presented net in the balance sheet.

Taxes payable and deferred taxes relating to elements of other comprehensive income are presented net along with the related income or cost in the comprehensive income statement.

12. Provisions

Provisions are recognised when it is probable that the DNB Group will need to settle a present obligation in connection with a past event, and it can be reliably estimated.

Provisions are measured at best estimate, reviewed on each reporting date and adjusted as necessary.

13. Leasing

DNB as lessor

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership. Other leases are classified as operating leases.

Operating leases

Operating assets are recognised as fixed assets in the balance sheet. Income from operating leases is recognised over the lease term on a straight-line basis and presented within the line item "Net interest income" in the income statement. Depreciation of the fixed assets is presented as ordinary depreciation in the income statement.

Financial leases

Financial leases are presented as lending in the balance sheet, and at inception the lease is measured at an amount equal to the net investment in the lease. The net investment represents minimum lease payments, unguaranteed residual values and any direct expenses incurred by the lessor in negotiating the lease, discounted by the implicit interest rate (internal rate of return). Leasing income is recognised in the income statement according to the annuity method, where the interest component is recognised within the line item "Net interest income" while instalments reduce the balance sheet value of the loan.

14. Dividends

Proposed dividends are part of equity until approved by the general meeting. At that time, the dividend is presented as liability in the

financial statement. Proposed dividends are not included in capital adequacy calculations.

15. Approved standards and interpretations that have not entered into force

DNB has not adopted any standard, interpretation or amendment at an early stage that has been issued but has not yet entered into force. The amendments that are effective from 1 January 2024 are not expected to have a significant impact on the consolidated financial statements.

16. Important accounting estimates, judgments and assumptions

When preparing the consolidated financial statements, management makes estimates, judgment and assumptions that affect the application of the accounting principles and the carrying amount of assets, liabilities, incomes, expenses and information on potential liabilities. Estimates and assumptions are subject to continual evaluation and are based on historical experience and other factors, including expectations of future events that are believed to be probable on the balance sheet date.

Impairment of financial instruments

See note G4 Credit risk management for information about the management and follow-up of credit risk and note G5 Measurement of expected credit loss for information about methodology for estimating impairment including an assessment of measurement uncertainty.

Fair value of financial derivatives and other financial instruments

The fair value of financial instruments that are not traded in an active market is determined by using different valuation techniques. The Group considers and chooses techniques and assumptions that as far as possible are based on observable market data representing the market conditions on the balance sheet date. When measuring financial instruments for which observable market data are not available, the Group makes assumptions regarding what market participants would use as the basis for valuing similar financial instruments. The valuations require application of significant judgment when calculating liquidity risk, credit risk and volatility among others. Changes in these factors would affect the estimated fair value of the Group's financial instruments. For more information see note G28 Financial instruments at fair value.

Measurement of liabilities under insurance contracts in DNB Livsforsikring

With respect to insurance liabilities, risks and uncertainties are mainly related to interest rate level, as well as the likelihood of death and disability. Higher life expectancy affects future expected insurance payments and liabilities. The interest rate curve used as basis for measuring insurance liabilities consists of a risk-free rate and an illiquidity premium. Management determines the principles for the interest rate curve. The illiquidity premium is derived from corporate bonds indices.

Valuation of properties within DNB Livsforsikring

Investment property is measured at fair value by discounting the expected net future cash flows to its presented value. Establishment of the future cash flows requires high degree of judgment and the fair value depends to a large extent upon the selection of assumption about the future, as example required rate of return and the level of future rental rates. The assumptions used in calculating the fair value of the property portfolio in DNB Livsforsikring can be found in note G34 Investment properties.

Income taxes, including deferred tax assets and uncertain tax liabilities

The Group is subject to income taxes in a number of jurisdictions. Significant judgment is required in determining the income tax in the consolidated financial statements, including assessments of recognised deferred tax assets and uncertain tax liabilities.

Deferred tax assets are recognised to the extent it is probable that the Group will have future taxable income against which they can be utilised. Extensive assessments must be made to determine the amount which can be recognised, included the expected time of utilisation, the level of profits computed for tax purposes as well as strategies for tax planning and the existence of taxable temporary differences.

There will be uncertainty related to the final tax liability for many transactions and calculations. The Group recognises liabilities related to the future outcome of tax disputes based on estimates of changed income taxes. When assessing the recognition of uncertain tax liabilities it is considered if the liability is probable. If the final outcome of the tax disputes deviates from the amounts recognised in the balance sheet, the deviations will

impact the income tax expense in the income statement for the applicable period.

For more information see note G24 Taxes.

Provisions and contingent liabilities

Judgement is involved in determining whether a present obligation exists, and in estimating the probability, timing and amount of any outflows. Provisions for claims in civil lawsuits and regulatory matters typically require a higher degree of judgement than other types of provisions. For more information see note G50 Contingencies.

17. Transition to IFRS 17

The application of the accounting principles under IFRS 17, as well as the reclassification of financial instruments under IFRS 9, has resulted in a new measurement. The table below shows balance sheet items that are affected by implementation of the new standard at the time of transition.

| <i>Amounts in NOK million</i> | 31 Dec. 2021 | Reclassi- fication and remeasurement | 1 Jan. 2022 |
|---|------------------|--|------------------|
| Assets | | | |
| Loans to customers | 1 744 922 | 49 | 1 744 971 |
| Commercial paper and bonds | 425 267 | 4 177 | 429 444 |
| Deferred tax assets | 649 | 1 703 | 2 352 |
| Other assets | 30 423 | (289) | 30 134 |
| Total assets | 2 919 244 | 5 641 | 2 924 885 |
| Liabilities and equity | | | |
| Liabilities to life insurance policyholders | 199 379 | 17 348 | 216 727 |
| Deferred taxes | 1 571 | (1 571) | |
| Other liabilities | 39 718 | (313) | 39 405 |
| Other equity | 188 559 | (9 823) | 178 736 |
| Total liabilities and equity | 2 919 244 | 5 641 | 2 924 885 |

The full implementation effect of IFRS 17, including the effect of the changed measurement method for some financial instruments under IFRS 9, is NOK 9 823 million after tax, and the Group's equity at the transition date, 1 January 2022, has been reduced accordingly. The transition to IFRS 17 does not affect the DNB Group's common equity Tier 1 (CET1) capital, and thus does not affect the Group's capital adequacy, leverage ratio, minimum distributable amount (MDA) or dividend capacity.

The transition effect resulting from the adoption of IFRS 17 as at 1 January 2022 has been calculated using a fair value approach for the majority of the insurance contracts. This applies to traditional guaranteed products, including defined-benefit pensions and paid-up policies, in addition to risk pensions. For employer's liability insurance and reinsurance, the full retrospective approach has been applied.

For the traditional guaranteed products, including defined-benefit pensions and paid-up policies in addition to risk pensions, it was not practicable to apply the full retrospective approach. Actual cash flows, information needed to allocate the CSM and key assumptions are not available or it was not possible to establish these for earlier periods.

In the calculation of the fair value at transition, the groups of insurance contracts have been evaluated according to the rules for fair value measurement in IFRS 13. Due to lack of relevant market transactions, the measurement of fair value is based on discounted cashflows, with an add-on for the return a market partici-

pant is expected to require. The difference between the calculated fair value and the insurance contract liability under the IFRS 17 constitute the CSM.

Financial instruments associated with IFRS 17 contracts measured at amortised cost have been reclassified to fair value through profit and loss as a result of the implementation of IFRS 17. The reclassification follows the transition option in IFRS 17 to reclassify due to accounting mismatches. The difference in measurement between amortised cost and fair value at transition was recognised in equity as at 1 January 2022. The effect was recognised adjusted for deferred tax.

The valuation of the liability according to IFRS 17 incorporates financial risk by applying a market-based discount rate. Over the contract term, the results will be identical to those under the IFRS 4 rules, disregarding transition requirements. IFRS 17 provides different measurement results and accrual of revenue compared with IFRS 4. Due to the use of market-based interest rates and recognition of onerous contracts, more volatility is expected in the results. However, when the VFA is used for measurement, the volatility of the results caused by changes in interest rates is reduced because changes in future interest rates are included in the CSM and the effect is recognised over the lifetime of the contract. Compared with the situation under the IFRS 4 rules, the one-time effect on equity as at 1 January 2022 will be compensated for by positive results in future periods.

Note G2 Segments

According to DNB's management model, the operating segments are independent profit centres that are fully responsible for their profit after tax and for achieving the targeted returns on allocated capital. DNB has the following operating segments: Personal customers, Corporate customers, Risk management and Traditional pension products. The Risk management and Traditional pension products segments are included in Other operations. DNB's share of profit in associated companies (most importantly Luminor, Vipps and Fremtind) is included in Other operations.

- Personal customers - includes the Group's total products and activities to private customers in all channels, both digital and physical, with the exception of home mortgages recorded under Traditional pension products, where returns accrue to the policy-holders. DNB offers a wide range of products through Norway's largest distribution network, comprising mobile banking, digital banking, branch offices, customer centres and real estate broking. In addition, external distribution of credit cards and car financing in Sweden is included in the business area.
- Corporate customers - includes all of the Group's business customers, both in Norway and abroad. Customers in the segment include everything from small business customers and start-ups to large Norwegian and international corporate customers. The product offering is tailored to the customers' different needs. DNB's services for the customer in the segment are based on sound industry knowledge and long-term customer relationships. Customers are served by offices both in Norway and abroad. In addition, customers are offered access to corporate online and mobile banking services as well as other digital services.

The income statement and balance sheet for the segments have been prepared on the basis of internal financial reporting for the functional organisation of the DNB Group into segments, as reported to group management (chief operating decision maker) for an assessment of current developments and the allocation of resources. Figures for segments are based on the group's accounting principles and DNB's management model. Allocation of costs and capital between segments involves a number of assumptions, estimates and discretionary distributions. The Group's operations are mainly carried out by Norwegian companies. Share of income from international units was 21.6 per cent in 2023, and share of lending was 12.5 per cent at the end of 2023.

Capital allocated to the segments is calculated on the basis of the DNB Group's common equity Tier 1 capital and long-term capitalisation ambition. There are special capital adequacy regulations for insurance operations, and in these companies, allocated capital corresponds to recorded equity. For other group operations, the allocation of capital to all units is based on the DNB Group's adaptation to Basel III with capital expectations related to credit risk, market risk, operational risk and goodwill. The allocation of capital for credit risk is based on the DNB Group's internal measurement of risk-adjusted capital requirements for credit. Capital requirements for market risk are allocated directly in accordance with risk-weighted volume, and operational risk is allocated based on the respective units' total income.

Note G2 Segments (continued)

| Total liabilities | 928 | 956 | 1 133 | 1 077 | 2 222 | 2 028 | (1 112) | (1 078) | 3 170 | 2 984 |
| Allocated capital ² | 60 | 63 | 112 | 109 | 97 | 77 | | | 269 | 250 |
| Total liabilities and equity | 989 | 1 019 | 1 245 | 1 187 | 2 319 | 2 105 | (1 112) | (1 078) | 3 440 | 3 233 |

1) Loans to customers include accrued interest, impairment and value adjustments. Correspondingly, deposits from customers include accrued interest.

2) Allocated capital for the segments is calculated based on the external capital adequacy expectations (Basel III/Solvency II) which must be met by the Group. The capital allocated in 2023 corresponds to a common equity Tier 1 capital ratio of 17.5 per cent compared to 18.0 per cent in 2022. Book equity is used for the Group.

Key figures

| <i>Per cent</i> | Personal customers | | Corporate customers | | Other operations | | Eliminations | | DNB Group | |
|---|--------------------|------|---------------------|------|------------------|------|--------------|------|-----------|------|
| | 2023 | 2022 | 2023 | 2022 | 2023 | 2022 | 2023 | 2022 | 2023 | 2022 |
| Cost/income ratio ¹ | 41.1 | 47.9 | 33.3 | 35.8 | | | | | 35.0 | 39.0 |
| Ratio of deposits to loans as at 31 December ² | 60.5 | 61.2 | 89.4 | 89.6 | | | | | 71.2 | 71.2 |
| Return on allocated capital ³ | 18.5 | 14.5 | 21.4 | 19.4 | | | | | 15.9 | 14.7 |

1) Total operating expenses relative to total income.

2) Deposits from customers relative to loans to customers.

3) Allocated capital for the segments is calculated based on the external capital adequacy expectations (Basel III/Solvency II) which must be met by the Group. Return on equity is used for the Group.

Note G3 Capitalisation policy and capital adequacy

Capital adequacy is measured and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD), which were implemented in Norway on 1 June 2022.

Risk Exposure Amount (REA) in relation to the capital base determines the banks' regulatory capital adequacy. The minimum requirement for total own funds is 8 per cent of REA for credit risk, market risk and operational risk. REA is also used for the calculation of the capital conservation buffer, systemic risk buffer, buffer for systemically important institutions and the countercyclical capital buffer.

Finanstilsynet (The Norwegian FSA) conducts assessments to determine whether there is a need by individual institutions for additional capital to cover risk elements that are not adequately covered by the capital requirements under Pillar 1. These are referred to as Pillar 2 requirements. For DNB, the Pillar 2 requirements are normally determined on an annual basis by Finanstilsynet based on an overall assessment of the risk and capital situation through the Supervisory Review and Evaluation Process (SREP). The Pillar 2 requirement at end-2023 for the DNB Group is 2.0 per cent of REA and must be met with a minimum of 56.25 percent CET1 capital and a minimum of 75 per cent Tier 1 capital.

Finanstilsynet also expects DNB Group to maintain a Pillar 2 Guidance (P2G), i.e. a margin in the form of common equity Tier 1 (CET1) capital that exceeds the total capital requirement with 1.25 per cent of total risk exposure amount (REA). At year-end 2023, the regulatory CET1 capital ratio requirement was 15.6 per cent, while the supervisory expectation was 16.8 per cent (incl. P2G). The requirement will vary due to the counter-cyclical buffer and systemic risk buffer, which are determined based on the total exposure in each country and their prevailing rates.

At year-end 2023, the DNB Group's CET1 capital ratio was 18.2 per cent while the capital ratio was 22.5 per cent, compared with 18.3 per cent and 21.8 per cent, respectively, a year earlier. REA came to NOK 1 100 billion at year-end 2023, compared with NOK 1 062 billion the year before.

DNB Bank ASA had a CET1 capital ratio of 19.6 per cent at year-end 2023, compared with 21.1 per cent a year earlier. The capital ratio was 25.2 per cent at year-end 2023, compared with 25.9 per cent a year earlier.

At year-end 2023, DNB Boligkreditt AS had a CET1 capital ratio of 19.6 per cent and a capital ratio of 22.0 per cent.

Following the global financial crisis, the leverage ratio was introduced as a supplement to the risk-weighted capital requirements. Tier 1 capital is used when calculating leverage ratio. The calculation base consists of both on balance sheet- and off-balance sheet items. The same conversion factors are used as in the standardised approach for the risk-weighted calculation. In addition, there are specific methods for calculating exposure values for derivatives and add-ons for repo transactions.

At year-end 2023, the Group's leverage ratio was 6.8 per cent, unchanged from 6.8 per cent a year earlier. DNB meets the total requirement of 3 per cent by a good margin.

Note G3 Capitalisation policy and capital adequacy (continued)

Capital adequacy is calculated and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD). The regulatory consolidation deviates from consolidation in the accounts and comprises the parent company, subsidiaries and associated companies within the financial sector, excluding insurance companies. Associated companies are consolidated pro rata.

Own funds

| <i>Amounts in NOK million</i> | 31 Dec. 2023 | 31 Dec. 2022 |

| <hr/> | | |
| Total risk exposure amount | 1 099 949 | 1 061 993 |
| Minimum capital requirement | 87 996 | 84 959 |
| <hr/> | | |
| Common Equity Tier 1 capital ratio (%) | 18.2 | 18.3 |
| Tier 1 capital ratio (%) | 20.0 | 19.6 |
| Total capital ratio (%) | 22.5 | 21.8 |

1) The Board proposes a dividend of NOK 16 per share for 2023.

2) Deductions are made for significant investments in financial sector entities when the total value of the investments exceeds 10 per cent of common equity Tier 1 capital. The amounts that are not deducted are given a risk weight of 250 per cent.

3) Investments in Tier 1 and Tier 2 instruments issued by the Group's insurance companies are deducted from the Group's Tier 1 and Tier 2 capital.

4) Tier 1 and Tier 2 capital in subsidiaries not included in consolidated own funds in accordance with Articles 85-88 of the CRR.

Note G3 Capitalisation policy and capital adequacy (continued)

The majority of the credit portfolios are reported according to the Internal Ratings Based (IRB) approach. Exposures to central and regional governments, institutions, equity positions and other assets are, however, reported according to the standardised approach.

Note G4 Credit risk management

Credit risk, or counterparty risk, is the risk of financial losses due to failure by the Group's customers/counterparties to meet their payment obligations towards DNB. Credit risk refers to all claims against customers/counterparties, mainly loans, but also commitments in the form of other extended credits, guarantees, interest-bearing securities, unutilised credit lines, derivative trading and interbank deposits. Credit risk also includes residual value risk and concentration risk. Residual value risk is the risk that the value of securing an exposure is lower than expected. Concentration risk includes risk associated with large exposures to a single customer or concentration within geographical areas, within industries or relating to homogeneous customer groups.

Credit risk management and measurement is described in detail in the Risk and Capital Management (Pillar 3) report. The Group instructions for credit activities are approved by the Boards of Directors of DNB Bank ASA. The principal objective of credit activity is to ensure that the quality and composition of the loan portfolio provide a good basis for the Group's short and long-term profitability. The quality of the portfolio should be consistent with DNB's aim of maintaining a low risk profile.

The Board of Directors of DNB Bank ASA sets long-term targets for the risk profile through the risk appetite framework. The aim of this framework is to ensure that risk is managed and integrated into the Group's governance processes. The risk appetite framework should provide a holistic and balanced view of the risk in the business operations and defines maximum limits for credit exposure. Limits have been set for annual growth in lending, risk concentrations, total credit risk exposure and predicted expected loss. An upper limit for growth, measured in terms of exposure at default (EAD), is set for each business area. To limit concentration risk, limits are set for exposure relating to individual customers and certain industries. The limit for expected losses applies to all types of credit risk and is measured by means of the Group's internal credit models. The risk appetite framework is operationalised through credit strategies for the individual customer segments. In addition to the risk appetite framework, there are credit strategies for the individual customer segments. Risk should be an integral part of the governance and remuneration system through indicators that operationalize risk limits and strategies, and are followed up by managers individually.

Credit risk exposure

The maximum credit risk exposure will be the carrying amount of financial assets plus off-balance sheet exposure, which mainly includes guarantees, unutilised credit lines and loan offers. The Group's maximum credit risk exposure and related collateral at year end are presented in note G6 Credit risk exposure and collateral.

Classification

DNB's internal models for risk classification of customers are subject to improvement and testing on an ongoing basis. The models are adapted to different industries and segments and are updated if calibrations show that their explanatory power has diminished over time. The Internal ratings-based advanced (IRBA) approach is used for most of the customers in the corporate and personal customer portfolios, to which the DNB Group has exposure. The IRBA approach entails that internal models for PD, LGD and EAD are used to estimate the bank's capital requirements. The standardised approach is used for housing cooperatives, newly-founded businesses and exposures in Sbanken.

All corporate customers with granted credit must be classified according to risk in connection with every significant credit approval and, unless otherwise decided, at least once a year. In the personal banking market, where there are a large number of customers, the majority of credit decisions are made on the basis of automated scoring and decision support systems. Risk classifications should reflect long-term risk associated with each customer and the customer's credit commitment.

The risk classification systems are used for decision support, monitoring and reporting. The risk parameters used in the classification systems are an integrated part of the credit process and ongoing risk monitoring, including the follow-up of credit strategies.

Probability of default, PD, is used to measure credit quality. The Group divides its portfolio into ten risk grades. The risk grades are determined based on the 12-month IRB PD for each credit commitment. This is presented in the table below. Credit-impaired exposures (exposures in stage 3) are assigned a PD of 100 per cent. The Group's portfolio divided into risk grades and IFRS 9 stages is presented in note G7 Credit risk exposure per risk grade.

DNB's risk classification¹

| Risk grade | Risk classification | Probability of default (per cent) | | External rating | |
|------------|---------------------|--------------------------------------|----------|-----------------|------------|
| | | From | Up to | Moody's | S&P Global |
| 1 | Low risk | 0.01 | 0.10 | Aaa – A3 | AAA – A- |
| 2 | | 0.10 | 0.25 | Baa1 – Baa2 | BBB+ – BBB |
| 3 | | 0.25 | 0.50 | Baa3 | BBB- |
| 4 | | 0.50 | 0.75 | Ba1 | BB+ |
| 5 | Medium risk | 0.75 | 1.25 | Ba2 | BB |
| 6 | | 1.25 | 2.00 | | |
| 7 | | 2.00 | 3.00 | Ba3 | BB- |
| 8 | High risk | 3.00 | 5.00 | B1 | B+ |
| 9 | | 5.00 | 8.00 | B2 | B |
| 10 | | 8.00 | impaired | B3, Caa/C | B-, CCC/C |

1) DNB's risk classification system, where 1 represents the lowest risk and 10 the highest risk.

Note G4 Credit risk management (continued)

Guidelines for credit activity

DNB's guidelines and processes for approving credits are described in the Group instructions for credit activity. The guidelines describe how DNB is to grant and follow up credit exposures in the various segments. Detailed descriptions are given of the assessment of new customers, follow-up of performing credit exposures, customers in financial difficulty and procedures for handling credit-impaired loans. The instructions also provide guidance to make sure that all extension of credit takes into account and supports DNB's Group Sustainability Policy, so as to ensure long-term and sustainable financial value creation and prevent misuse of the financial system for money laundering or terrorist financing purposes.

The granting of credit in DNB is based on authorisation and approval matrices. As a fundamental principle, one person makes a recommendation and another one approves it. The matrices are differentiated on the basis of volume, risk and, if relevant, industry. While only two employees may be involved in recommending and approving a low-risk exposure in the form of a home mortgage, recommendations for large/complex exposures must also be endorsed by a senior credit officer. In addition, advice will be sought from credit committees and the involvement of industry specialists may be required.

A decisive element when granting credit is the customers' debt servicing capacity in the form of incoming future cash flows, such as earned income or income from the business operations which are being financed. The bank seeks to further mitigate the risk of future losses by requiring that collateral is furnished. Collateral can be in the form of physical assets, guarantees, cash deposits or netting agreements. As a rule, physical collateral must be insured. Negative pledges, whereby customers undertake to keep their assets free from encumbrances vis-à-vis other lenders, are also used as a risk-mitigating measure.

In addition to collateral, most corporate credit agreements will include financial covenants, which represent an additional risk-mitigating element to ensure that DNB becomes aware of and involved in any financial challenges at an early stage. Examples of financial covenants are minimum net cash flow and equity ratio requirements.

Sustainability in the credit decisions

Sustainability assessments are integrated into DNB's credit decisions and are managed in accordance with the Group Policy for Risk Management and Group Instructions for Sustainability in Credit Activities. According to the instructions, activities on the part of a borrower that affect ESG risk must be analysed in credit proposals in the same way as other potentially relevant risk drivers. DNB use an internally developed classification tool for assessing companies' ESG risk in the categories low, medium and high. The tool covers four thematic areas: climate, environment, social conditions and corporate governance. Of these, climate risk assessment has been enhanced in 2023. The ESG classification is an important part of the decision-making process for the establishment of new business loans and is assessed on an equal footing with other risk factors. This work uses an ESG score diagram, which is sector-specific, allowing us to address the most significant risks in the different industry segments. In the event of high ESG risk, the credit decision for new customers is escalated to the highest decision level below the Board.

For customers with a total credit exposure of more than NOK 8 million, ESG risk is assessed and commented on in the credit cases. For customers with a total credit exposure of more than NOK 50 million risk classification must also be performed, using the in-house developed ESG risk assessment tool. Our own ESG assessments are complemented by third-party ESG analyses. The ESG classification is actively used in dialogue with the customer.

In 2023, the link between ESG risk and financial risk has been made clear in the credit reporting guidelines. For customers with moderate or high ESG risk, specific comments shall be made on how ESG risk may affect their future debt-servicing capacity in the financial analysis section of the credit documentation. For further information on how DNB works with and assesses ESG risk, see the chapter ESG risk in the Pillar 3 report for 2023, which is published on ir.dnb.no.

Monitoring credit risk

Performing customers

The annually updated risk classification of customers is a complete review of all risks identified by DNB relating to each customer. A new evaluation of all collateral provided is an integral part of the review. The decision-making and authorisation matrices are also to be used in connection with the renewal of all existing credits and thus ensure that personnel with relevant expertise are always involved when considering large and complicated exposures. Performing customers also include customers that have experienced significant increase in credit risk.

Personal customers are followed up through a systematic portfolio management system. Exposures are followed up individually if increased credit risk has been identified.

Watchlist

The watchlist is the Group's primary tool for following up corporate customers when credit risk has increased. If customers breach financial covenants or a loss event has occurred, it will be considered to include the exposure on the watchlist. Loss events include serious financial problems or major changes in market conditions. In addition, it is an integral part of credit activity to consider whether to place high-risk customers (risk grades 8-10) on the watchlist. Customers listed on Watchlist are subject to special monitoring. More frequent, often quarterly risk assessments are required, including an updated valuation of collateral. In addition, DNB must prepare an action plan to manage the risk situation that has arisen. The particularly close follow-up of customers facing greater challenges is based on the bank's experience that special monitoring both reduces the risk that losses will occur and minimises the losses that actually materialise. Each time watchlisted exposures are reviewed, the need for individual assessment of impairment losses will be performed.

Note G4 Credit risk management (continued)

Forbearance

If a customer gets into financial difficulties, DNB may in some cases grant voluntary concessions in the form of less stringent financial covenants or reduced/deferred interest and instalment payments. Such measures are offered in accordance with the Group's credit guidelines, thus aiming to help customers through a tough financial period when it is expected that they will meet their obligations on a later date. This is part of DNB's strategy to reduce losses.

The DNB Group's total forbearance exposures, in accordance with the definition of forbearance in CRD, are shown in the following table:

| Forbearance | 31 December 2023 | | | 31 December 2022 | | |
|--|------------------|---------|--------|------------------|---------|--------|
| | Stage 2 | Stage 3 | Total | Stage 2 | Stage 3 | Total |
| <i>Amounts in NOK million</i> | | | | | | |
| Gross carrying amount and loan commitments | 11 793 | 10 019 | 21 811 | 20 233 | 13 689 | 33 922 |
| Expected credit loss | 37 | 2 836 | 2 874 | 123 | 3 143 | 3 266 |

Credit-impaired portfolio

In the event of credit impairment, customers are closely monitored. In the bank's experience, other supplementary resources are required during this stage than for performing customers. Customer exposures which fall into this category will either be transferred in their entirety to a separate unit with special expertise, or persons from this unit will join the customer team.

Reposessed companies and assets

In connection with the follow-up of defaulted exposures, DNB will in some cases take over assets provided as collateral for loans and guarantees. All acquired assets are normally followed up by the Group Investment unit, whose main target is to secure and recover values for DNB's shareholders through financial restructuring when companies or other assets are reposessed due to default. At the time of acquisition, such assets are valued at their estimated realisable value. Any deviations from the carrying amount of the exposures at the time of acquisition are classified as impairment of loans and guarantees in the income statement. Reposessed assets are recognised in the balance sheet and measured after initial recognition according to the rules that apply for the foreclosed assets.

Counterparty risk for derivatives

DNB enters into derivative transactions on the basis of customer demand and to hedge positions resulting from such activity. In addition, derivatives are used to hedge positions in the trading portfolio and take positions in the interest rate, currency, commodity and equity markets. Derivatives are used to hedge currency and interest rate risk arising in connection with funding and lending. Derivatives are generally traded "over the counter" (OTC), which means that individual contracts are agreed upon by the parties. The credit risk that arises in connection with derivative trading is included in the DNB Group's overall credit risk measurement.

Netting agreements and bilateral guarantee agreements are used as a means of mitigating counterparty risk associated with individual counterparties. These agreements make it possible to net the positive and negative market values linked to contracts with individual counterparties. CSA (Credit Support Annex) agreements are another type of risk-mitigating measure. CSA agreements have been entered into with most major bank counterparties and other financial counterparties, as well as a steadily increasing number of non-financial counterparties. Under these agreements, collateral is posted to reduce counterparty credit risk, and the value of the derivative and the collateral is calculated daily. The collateral posted is most often cash, though other eligible collateral is used as well. The agreements are not normally dependent on the credit quality of the counterparty, but some of them stipulate that the maximum exposure level before collateral is required (the threshold value) will be reduced if the counterparty is downgraded.

The different interest rate products (interest rate swaps and Forward Rate Agreements (FRAs) in currencies) are cleared through clearing houses like LCH SwapClear. DNB's counterparty risk on an individual counterparty is thus transferred to the clearing house. Equity forward contracts, securities loans and currency trading for personal customers are monitored and value changes are evaluated daily and collateral is exchanged under margin agreements.

Note G5 Measurement of expected credit loss

DNB applies a three-stage approach when measuring expected credit loss (ECL) on loans to customers, loan commitments, financial guarantees and other financial instruments subject to the IFRS 9 impairment rules:

- A financial instrument that is not purchased or originated credit impaired at initial recognition, is classified as stage 1 with 12-month ECL.
- If a significant increase in credit risk since initial recognition is identified the financial instrument is moved to stage 2 with lifetime ECL measurement. An increase in credit risk reflects both customer-specific circumstances and developments in relevant macro risk drivers for the segment where the customer belongs. The assessment of what is considered to be a significant increase in credit risk is based on a combination of quantitative and qualitative indicators and backstops.
- If credit risk deteriorates further, and the financial instrument is assessed to be credit impaired, the financial instrument is moved to stage 3 with lifetime ECL measurement. As opposed to stages 1 and 2, the effective interest rate is calculated on amortised cost instead of the gross carrying amount. For definition of credit impaired see further description below.

Note G5 Measurement of expected credit loss (continued)

The expected credit loss measurement is based on the following principles:

- 12-month ECL is measured as an amount equal to the portion of lifetime ECL that results from possible default events within the next 12 months.
- The loss provision for financial assets in stage 1 and stage 2 is calculated as the present value of exposure at default (EAD) multiplied by the probability of default (PD) multiplied by loss given default (LGD), and discounted by using the effective interest rate (EIR). PD, LGD and EAD use the IRB framework as a starting point, but are converted to be point in time and forward-looking as opposed to through the cycle and conservative.
- Past, present and forward-looking information is used to estimate ECL. For this purpose, DNB's loan portfolio is split into 20 segments based on geography and industry. All customers within a segment are exposed to the same risk drivers.
- For credit impaired financial instruments in stage 3, either individual assessments or model-based calculations are performed for ECL, depending on portfolio.
- For stage 1 and 2, a model is used to calculate ECL.

Key components for the ECL measurement, summarised

| IFRS 9 stage | Credit risk development | Customer status | ECL measurement | ECL measurement method | Effective interest calculation |
|--------------|-------------------------|-----------------|-----------------|---|--------------------------------|
| Stage 1 | No significant increase | Performing | 12-month | ECL model | Gross carrying amount |
| Stage 2 | Significant increase | Performing | Lifetime | ECL model | Gross carrying amount |
| Stage 3 | Defaulted | Credit impaired | Lifetime | Individual measurement per customer / ECL model | Amortised cost |

Measurement of expected credit loss in ECL model

The model follows five steps: segmentation, determination of macro scenarios, determination of credit cycle index, calculation of ECL and staging. In the following each step will be described in more detail.

Segmentation, macro scenarios and credit cycle index

The assessment of the significant increase in credit risk and the calculation of ECL incorporate past, present and forward-looking information.

In order to reflect the effect of macro drivers in a reasonable and supportable manner DNB's portfolio has been divided into 20 segments with shared credit risk characteristics. The segmentation is based on industry and geographical location, but about half of the industry segments are exposed to global markets and are influenced by global risk drivers.

Based on a statistical regression analysis, key risk drivers impacting PD are identified for the different segments. The assessments used to select the different risk drivers have been based on several criteria; the statistical model's explanatory power, a qualitative reasonableness check (e.g. if it makes sense to include the risk driver) and an aim not to have too many factors as this would unnecessarily increase the complexity. Relevant macro drivers are shown in the table below. Their impact on ECL will vary by financial instrument. Forecasts of each of the relevant risk drivers (the base economic scenario) are primarily prepared on a quarterly basis and provide the best estimate of developments in the risk drivers for the forecast period. The forecast periods incorporated in the segments vary between three and four years, and forecasts are prepared for each year in the forecast period. Macro forecasts are usually obtained from DNB Markets and supplementary internal sources and are benchmarked against various external sources.

The macro forecasts are incorporated in the credit cycle index (CCI). The CCI shows the relationship between the historically observed defaults and relevant macro factors established from statistical regression analysis. The position on the index indicates whether the current state of the economy for a given segment is better or worse than normal, and the forecasts are used to project the development of the index in the forecast period. After the forecast period, the CCI is assumed to be mean reverting. This means that the credit cycle for each segment returns to a normal state (long-term mean).

The CCI is further used to generate a base line PD curve for each instrument that follows the development of the CCI. When the CCI moves towards better times, the PD will everything else equal be reduced and vice versa.

Expert credit judgement

The assessment of the macro prognoses and the impact on the forecasted credit cycle index (CCI) are key judgments, and DNB has established an advisory forum for the Group's Chief Financial Officer to address the judgements. The forum's purpose is to assess whether the predicted CCI for each segment reflects the management's view on the expected future economic development. When the projections of the credit cycle do not represent the management's view of the expected business-related and financial impacts, professional judgement has been applied to ensure that the management's view is better reflected in the CCI used.

Note G5 Measurement of expected credit loss (continued)

The Real estate segments are considered to be affected by considerable uncertainty relating to macroeconomic developments. It was the ECJ forum's assessment that the expected effects on the economy, especially from price and interest rate developments, are not fully reflected in the ECL model. Therefore, a model adjustment was carried out, which led to an increase in the ECL of NOK 223 million, as at 31 December 2023.

Multiple scenarios

In order to capture the non-linear relationship between negative credit risk development and ECL, multiple scenarios are incorporated when determining significant increase in credit risk and measuring ECL. DNB use the base scenario for each risk driver as a starting point when deriving CCI and PD curves as described above. Alternative scenarios are translated into alternative paths of a probability fan around the baseline. This method means that each scenario represents one percentile on a probability fan with each percentile representing a possible development in credit risk depending on the macroeconomic development.

The width of the fan for the individual segment is determined by the past volatility in the correlation between developments in the risk drivers and developments in credit risk and ECL. This results in a correlation where the higher the volatility in a segment resulting from changes in the risk drivers, the larger the gap between the baseline and the outer percentiles of the fan.

Sensitivity

To calculate model-based expected credit losses, DNB uses a range of macroeconomic variables where each variable is given several alternative scenarios of probability.

Macroeconomic variables are interrelated in that, changes in a forecast in one variable will most likely affect forecasts in the other variables. Furthermore, a weakening of the macro forecasts would normally imply more customers migrating from stages 1 and 2 to stages 2 and 3. Comparative sensitivity analyses for each macroeconomic variable, will therefore, in isolation, not provide relevant sensitivity information.

DNB has simulated an alternative adverse scenario for relevant macro forecasts. The scenario represents a possible downside compared with the scenario used for calculating the ECL recognised in the financial statements. Each macroeconomic variable is given alternative weaker expectations for each period in the forecast period. The table below shows the average change in the macro variables in the alternative scenario compared with the base scenario in the forecast period, in per cent. In the simulated alternative scenario, the ECL would increase by approximately 17 per cent compared with the model based ECL that is recognised in the financial statements at 31 December 2023.

The following table shows selected base case macroeconomic variables for the period 2023 to 2025 used in DNB's model to calculate the ECL recognised in the financial statements compared with the base case in the alternative scenario. Each variable represents an annual estimate.

Selected base case macroeconomic variables used for calculating the ECL recognised in the financial statements and the alternative scenario

| Per cent | Base case financial statements | | | Base case alternative scenario | | |
|--|--------------------------------|-------|------|--------------------------------|-------|-------|
| | 2023 | 2024 | 2025 | 2023 | 2024 | 2025 |
| Global GDP, year-to-year growth | 2.9 | 2.8 | 3.0 | 2.9 | 1.8 | 2.0 |
| Emerging countries' GDP, year-to-year growth | 4.0 | 3.8 | 3.9 | 4.0 | 2.8 | 2.9 |
| Swedish GDP, year-to-year growth | (0.5) | 0.6 | 1.3 | (0.5) | (0.4) | (0.2) |
| Oil price, USD per barrel | 84 | 90 | 90 | 84 | 100 | 95 |
| Norwegian house price index, year-to-year growth | (0.5) | (0.6) | 4.7 | (0.5) | (8.0) | (8.0) |
| Norwegian registered unemployment rate | 1.8 | 2.4 | 2.8 | 1.9 | 2.8 | 3.2 |
| NIBOR 3-month interest rate | 4.2 | 4.9 | 4.0 | 4.1 | 5.5 | 4.1 |

Note G5 Measurement of expected credit loss (continued)

The following table provides an overview of the macro forecasts that are included in the loan loss model. The table includes the average downside that is imposed on each macro variable in the alternative scenario.

Change from the average base case level used for calculating the ECL recognised in the financial statements, to the average base case level used in the alternative scenario

| | Change |
|--|--------|
| Global GDP (percentage points) | (0.8) |
| Emerging countries' GDP (percentage points) | (0.8) |
| Oil price (per cent) | 4.2 |
| Norwegian mainland GDP (percentage points) | (0.6) |
| Norwegian consumer price index (percentage points) | 0.9 |
| Norwegian house price index (percentage points) | (5.9) |
| Norwegian registered unemployment rate (percentage points) | 0.4 |
| NIBOR 3-month interest rate (percentage points) | 0.2 |
| STIBOR 3-month interest rate (per cent) | 0.3 |
| Swedish GDP (percentage points) | (0.9) |
| Norwegian commercial real estate rental price (per cent) | (15.6) |
| Salmon price (per cent) | (39.7) |
| Floater spot rate (per cent) | (30.7) |
| Rig utilisation rate (per cent) | (22.3) |
| Very large crude carriers spot rate (per cent) | (48.1) |
| Capesize spot rate (per cent) | (16.2) |
| Very large gas carrier spot rate (per cent) | (58.4) |

One of the most significant model-based exposures is lending to personal customers. The lending includes mortgage lending, credit card and consumer financing. In addition to specific customer attributes, the portfolio's ECL is forecasted based on the Norwegian house price Index, the Norwegian interest rate, household debt level and the unemployment rate. In the simulated alternative scenario, where all of these input parameters cause more adverse projections, the ECL would increase by approximately 32 per cent for the personal customer portfolio compared with the ECL measured at 31 December 2023 for the same portfolio.

DNB has furthermore investigated the effect of non-linearity in the ECL for stage 1 and stage 2. If the base scenario alone is used to calculate expected credit losses, thereby excluding the fan that represents the range of alternative scenarios, the ECL at 31 December 2023 would decrease by 2 per cent.

Calculation of ECL

The determination of a significant increase in credit risk and the measurement of ECL are based on parameters already used in credit risk management and for capital adequacy calculations: PD, LGD and EAD. The parameters have been adjusted in order to give an unbiased estimate of ECL.

Probability of default (PD)

DNB applies a range of different models to determine a customer's PD. The choice of model depends on whether it is a personal or corporate customer and on which industry the customer operates in. The development in the customer's PD is a key component in DNB's monitoring of credit risk in the portfolio, see note G4 Credit risk management, and an adjusted IRB PD is used both in calculating the ECL and in assessing whether a significant increase in credit risk has occurred since initial recognition. For determining PD in capital adequacy calculations, DNB has been granted permission to use the IRB approach. These models are conservative and only reflect a limited degree of cyclical. For the ECL measurement, there is a need to generate a PD which is forward-looking and reflects all available relevant information.

This is necessary in order to provide an unbiased probability-weighted estimate of ECL. In order to apply PDs for ECL measurement, four modifications have been made to the PDs generated using the IRB approach:

- incorporation of macroeconomic scenarios
- conversion to an unbiased, forward-looking PD
- conversion of 12-month PD to lifetime PD
- removal of margin of conservatism in the PD estimate

These modifications imply that the PD used for the ECL measurement reflects management's current view of expected cyclical changes and that all PD estimates are unbiased.

Two types of PDs (IFRS modified) are generated and used in the ECL calculation:

- A 12-month PD is the probability of default occurring within the next 12 months (or over the remaining life of the financial instrument if that is less than 12 months). This is used to calculate the 12-month ECL.
- A lifetime PD is the annualised probability of a default occurring over the remaining life of the financial instrument. This is used to evaluate if there has been a significant increase in credit risk since initial recognition and to calculate lifetime ECL.

Note G5 Measurement of expected credit loss (continued)

Loss given default (LGD)

LGD represents the percentage of EAD which the Group expects to lose if customers fail to meet their obligations, taking the collateral provided by the customer, future cash flows and other relevant factors into consideration.

Similar to PDs, DNB uses IRB LGDs for capital adequacy calculations. In order to convert the IRB LGDs to IFRS LGDs four modifications have been made:

- incorporation of macroeconomic scenarios
- use of the effective interest rate to discount future estimated cash flows
- removal of the margin of conservatism to produce unbiased projections rather than downturn projections, and to exclude regulatory floors
- removal of the estimated indirect costs of realising collateral

These modifications imply that the LGDs used for the ECL measurement should reflect management's current view of the cyclical changes and that all LGD estimates are unbiased.

Exposure at default (EAD)

EAD is the share of the approved credit that is expected to be drawn at the time of any future default. The EAD is adjusted to reflect contractual payments of principal, interest and estimated early repayment. The proportion of undrawn commitments expected to be drawn at the time of default is reflected in the EAD by using a credit conversion factor.

Significant increase in credit risk (staging)

The assessment of a significant increase in credit risk is based on a combination of quantitative and qualitative indicators and back stops. A significant increase in credit risk has occurred when one or more of the criteria below are met.

Quantitative criteria

A significant increase in credit risk is determined by comparing the remaining lifetime PD for an instrument at the reporting date, as expected at initial recognition, with the actual lifetime PD at the reporting date. If the actual lifetime PD is higher than what it was expected to be, an assessment is made of whether the increase is significant.

An increase in lifetime PD with a factor of 2.5 or more from initial recognition is assessed to be a significant increase in credit risk. This threshold is based on an assessment of the increase in credit risk that would lead to closer customer follow-up in order to ensure that proper credit risk management and business decisions are made.

Further, the change in PD must be a minimum of 0.6 percentage points for the deterioration in credit risk to be considered to be significant. In the high end of the risk scale a change of 7.5 percentage points or more is considered to be a significant deterioration in credit risk even if this is less than a change of 2.5 times lifetime PD. These limits reflect the high sensitivity to change in the low end of the risk scale and the low sensitivity to change in the high end of the scale.

As part of DNB's credit risk management policy, the group applies a risk scale where all customers and instruments are rated on a coherent scale meaning that a risk grade has the same explanatory power independent of segment, geography and product. DNB therefore uses a common threshold for all financial instruments with respect to what constitute a significant increase in credit risk. For further information about DNB's risk scale and classification see note G4 Credit risk management.

The extension or deferral of payments to a borrower does not automatically result in an instrument being considered to have a significantly increased credit risk. Careful consideration is given to whether the credit risk has significantly increased, and the borrower is unlikely to restore their creditworthiness and consequently is granted forbearance, or whether the borrower is only experiencing a temporary liquidity constraint. On a general level, a change in the macroeconomic outlook will influence the assessment of a significant increase in customers' credit risk, as this will affect the overall view of the economic situation for the relevant segment.

Qualitative criteria

Qualitative information is normally reflected in the respective PD models for each group of customers.

Back stop

Back stops are used and a significant increase in credit risk has occurred if:

- the customer's contractual payments are 30 days past due
- the customer has been granted forbearance measures due to financial distress

Sensitivity

DNB has performed a sensitivity analysis on the threshold of the significant increase in credit risk used to measure ECL in stages 1 and 2. If a threshold of 1.5 times lifetime PD is used for determining the significant increase in credit risk, as an alternative to the 2.5 threshold, more exposures would migrate from stage 1 to stage 2 and the ECL in stage 1 and 2 would increase by 3 per cent compared with the ECL measured at year-end 2023. If a threshold of 3.5 times lifetime PD is used instead, the ECL would decrease by 2 per cent compared with the ECL measured at year-end 2023.

Note G5 Measurement of expected credit loss (continued)

Definition of default and credit impaired exposures in stage 3

The definition of credit impaired is fully aligned with the regulatory definition of default.

A financial instrument is defined to be in default if a claim is more than 90 days overdue, the overdue amount exceeds NOK 2 000 and more than 1 per cent of the debtor's commitment, and the default is not due to delays or accidental circumstances on the part of the debtor.

A commitment is also defined to be in default if DNB:

- significantly writes down the commitment as a result of a weakening of the debtor's creditworthiness
- agrees to changes in the terms and conditions because the debtor is having problems meeting payment obligations, and this is assumed to significantly reduce the value of the cash flow
- sells debt for an amount that is significantly lower than the nominal value as a result of an impairment of the debtor's creditworthiness
- has reasons to assume that the debtor will be subject to debt settlement or bankruptcy/involuntary liquidation proceedings, or be placed in receivership
- has other reasons to assume that the payment obligation will not be met

A commitment is defined to represent anticipated default if it is considered likely that the customer, based on its regular business activities, does not have debt payment ability for its total obligations (unlikelihood to pay).

When an incidence of default has occurred, the customer must be deemed to be in default for a period of 3 or 12 months after the circumstance that triggered the incidence of default has ceased to apply.

Measurement of expected credit loss for credit-impaired financial instruments

When a customer becomes credit-impaired (stage 3), the probability of default is set to 100 per cent. In DNB, the main principle is that expected credit loss (ECL) for credit-impaired financial instruments is calculated individually for each customer and without the use of a model. For the portfolio of small and medium-sized enterprises with commitments of less than NOK 50 million, the ECL is, as a general rule, calculated using a model. The ECL for stage 3 exposures in the Sbanken portfolio is calculated using a model.

The individual ECL provision is estimated as the difference between the carrying amount and the net present value of the estimated future cash flows, discounted by the original effective interest rate. The estimated future cash flows are based on developments in the customer's exposure, past experience with the customer, the probable outcome of negotiations and expected macroeconomic developments that will influence the customer's expected cash flow. If the exposure is collateralised, the value of the collateral in a going concern scenario is included in the estimated future cash flows regardless of whether foreclosure is probable or not.

The ECL is estimated based on the weighted ECL of the different scenarios. The scenarios should represent the actual scenarios for a customer in financial difficulties, but in general, three different scenarios are to be considered.

- Going concern: What is the probability of a development where all debt is repaid without concessions in the form of debt conversion or write-offs? The ECL in this scenario is zero.
- Restructuring: What is the probability of a development where the customer must restructure the capital structure to maintain going concern, and what is the ECL for DNB in such a restructuring?
- Liquidation: What is the probability of a development where a company is liquidated through bankruptcy, orderly liquidation etc., and what is the ECL for DNB in this scenario?

The ECL within each scenario, and the probability of each scenario occurring, will be dependent on both market conditions and customer-specific factors. The sum of the scenario weights must always be 100 per cent. If a scenario is highly unlikely, the probability can be set to zero.

The ECL within the restructuring scenario will be dependent on the discounted present value of the customer's expected future cash flows, as well as on the expected debt level that may be agreed upon with the stakeholders in a restructuring. The ECL in the liquidation scenario will be dependent on the expected realisation value of collateral given a sale of assets for example as part of a bankruptcy or orderly liquidation process.

As at 31 December 2022, a model-based calculation of the ECL for small and medium-sized corporate customers in stage 3 with commitments of less than NOK 50 million was implemented. There is still an option to measure the ECL by individual calculation, in which case this is done on a customer-by-customer basis. The ECL model for stage 3 exposures is based on the same principles as the ECL model for stage 1 and 2 exposures. However, the ECL model for stage 3 exposures determines a recovery rate, and based on the probability of the commitment not recovering from stage 3, calculates a stage 3 ECL. The ECL is estimated on the basis of a collateral index and forward-looking macro prognoses. Collateral is grouped into commercial real estate, private homes and other collateral based on the relevant exposure.

For credit-impaired personal customers with commitments of more than NOK 5 million, an individual assessment of collateral and debt servicing capability is done to determine the ECL. For credit-impaired personal customers with commitments of less than NOK 5 million, a portfolio approach is used to estimate the ECL. The estimate is calculated using a discounted expected collateral value that provides expected recovery rates for a representative sample of customers in default. The expected recovery rates are then applied to customers with similar characteristics to the customers in the sample.

Note G5 Measurement of expected credit loss (continued)

Sensitivity

DNB has performed a sensitivity analysis on the engagements with the largest ECL in stage 3. If the weight of probability placed on the most adverse scenario increased by 10 per cent, the value of the stage 3 ECL would increase by 5 per cent.

DNB's write-off policy

DNB writes off and thereby reduces the carrying amount of a financial asset when there is no reasonable expectation of recovery. This might for example be the case when a court of law has reached a final decision, a decision has been made to forgive the debt, or a scheme of composition has been confirmed. Write-off can relate to the entire asset or a portion of the asset and can constitute a derecognition event. DNB maintains the legal claim towards the customer even though a write-off has been recognised. For corporate customers, there is a difference between internal write-offs and debt forgiveness. In the latter, DNB does not maintain a legal claim.

Measurement uncertainty

The measurement of the expected credit loss involves increased complexity, and management must apply its professional judgement for many of the key assumptions used as input in the measurement. For stage 1 and 2, estimation uncertainty in the ECL calculation relates to the determination of PD, LGD and EAD. This is both in terms of using historic data in the development and calibration of models and the judgement performed in relation to setting these parameters as part of the credit process. Furthermore, the determination of how to do the segmentation of the loan portfolio, the identification of relevant risk drivers for each segment and the forecasts for each of the risk drivers also create estimation uncertainty.

Other areas with significant estimation uncertainty are the creation of multiple future economic scenarios, estimation of expected lifetime, assessment of significant increases in credit risk and determination of whether the criteria for default are satisfied.

For exposures in stage 3 where ECL is measured individually per customer, significant judgement is applied when determining assumptions used as input for the customer's future cash flow and assumptions related to valuation of collateral, including the point in time when collateral is potentially taken over.

Sensitivities are disclosed separately above.

Note G6 Credit risk exposure and collateral

The table under includes on and off-balance sheet items which entail credit risk and the assessed value of related collateral. If available, fair values are used. In general, fair values are estimated according to different techniques depending on the type of collateral. With respect to properties, models estimating the value of collateral based on market parameters for similar properties, are used. Corresponding techniques are used for other non-financial collateral. In order to reflect the effective available collateral value, the fair value of collateral included in the table is limited to the maximum credit exposure of the individual loan or exposure.

Other collateral includes the assessed fair value of movables, sureties, ships and cash as well as other credit enhancements, such as netting agreements and guarantees received.

Credit risk exposure and collateral as at 31 December 2023

| <i>Amounts in NOK million</i> | Maximum exposure to credit risk | Secured by real estate | Collateralised by securities | Other collateral | Total collateral | Net exposure to credit risk |
|---|---------------------------------|------------------------|------------------------------|------------------|------------------|-----------------------------|
| Deposits with central banks | 331 099 | | | | | 331 099 |
| Due from credit institutions | 94 259 | | 113 134 | 2 | 113 135 | (18 876) |
| Loans to customers | 1 997 363 | 1 238 010 | 184 348 | 255 509 | 1 677 868 | 319 496 |
| Commercial paper and bonds | 569 464 | | | | | 569 464 |

| Guarantees | 9 795 | 8 | | 4 701 | 4 708 | 5 087 |
| Unutilised credit lines and loan offers | 705 635 | 174 440 | 169 | 106 147 | 280 756 | 424 879 |
| Other commitments | 119 669 | 4 311 | | 15 242 | 19 553 | 100 117 |
| Total maximum exposure to credit risk not reflected on the balance sheet | 835 100 | 178 759 | 169 | 126 089 | 305 017 | 530 083 |
| Total | 3 427 592 | 1 375 801 | 92 397 | 381 552 | 1 849 750 | 1 577 842 |
| <u>Of which stage 3:</u> | | | | | | |
| Loans to customers | 20 022 | 9 772 | | 8 049 | 17 821 | 2 201 |
| Total maximum exposure to credit risk reflected on the balance sheet | 20 022 | 9 772 | | 8 049 | 17 821 | 2 201 |
| Guarantees | 856 | | | 855 | 855 | 0 |
| Unutilised credit lines and loan offers | 1 429 | 248 | | 185 | 434 | 995 |
| Other commitments | 602 | 91 | | 108 | 199 | 403 |
| Total maximum exposure to credit risk not reflected on the balance sheet | 2 886 | 340 | | 1 149 | 1 488 | 1 398 |
| Total | 22 909 | 10 112 | | 9 198 | 19 310 | 3 599 |

Financial assets of NOK 2.6 billion in stage 3 has no credit loss due to collateralisation.

Note G6 Credit risk exposure and collateral (continued)

Comments to the main items as at 31 December 2023:

- *Deposits with central banks:* DNB engages only in short-term transactions with central banks, mainly in OECD countries.
- *Loans to customers:* See further description under "Guidelines for credit activity" in note G4 Credit risk management.
- *Commercial paper and bonds:* The Group's investments in commercial paper and bonds, are within market risk limits approved by the Board of Directors.
- *Financial derivatives:* Other collateral represents netting opportunities against other outstanding balances with customers and cash collateral received.
- *Guarantees:* See further description under "Guidelines for credit activity" in note G4 Credit risk management.
- *Unutilised credit lines and loan offers:* Offers of loans, credits and credit lines totalling NOK 108 519 million were included in the maximum credit exposure. No formal collateral has been established for such exposure, and the assessed value is not included in the table. Collateral is established once the offers are accepted by the customers. The assessment of the value of any collateral established in connection with such offers follows the procedure and criteria described under "Guidelines for credit activity" in note G4 Credit risk management.

Credit risk exposure and collateral as at 31 December 2022

| <i>Amounts in NOK million</i> | Maximum exposure to credit risk | Secured by real estate | Collateralised by securities ¹ | Other collateral ¹ | Total collateral | Net exposure to credit risk |
|---|---------------------------------|------------------------|---|-------------------------------|------------------|-----------------------------|
| Deposits with central banks | 309 661 | | 9 470 | | 9 470 | 300 191 |

1) NOK 75 billion has been reclassified from other collateral to collateralised by securities.

Financial assets of NOK 2.1 billion in stage 3 has no credit loss due to collateralisation.

Note G7 Credit risk exposure by risk grade

In the tables below, all loans to customers and financial commitments to customers are presented by risk grade. The division between risk classes is based on an IRB probability of default (PD) as shown in the table DNB's risk classification in note G5. See also the section Probability of default (PD) in note G6 for a description of the correlation between IRB PD and IFRS PD. The amounts are based on the gross carrying amount and the maximum exposure before adjustments for impairments.

Loans as at 31 December 2023

| <i>Amounts in NOK million</i> | Stage 1 | Stage 2 | Stage 3 | Loans at fair value | Total |

| Total impairment | (536) | (328) | (1 786) | (2 649) | (18) | 158 | 132 | 272 |

1) The impairment of financial instruments include impairment provisions relating to the legacy portfolio in Poland of NOK 671 million. See note G50 Contingencies.

The contractual amount outstanding on financial assets that were written off during the reporting period and are still subject to enforcement activity, were NOK 82 million as at 31 December 2023 (NOK 52 million as at 31 December 2022).

Note G9 Development in gross carrying amount and maximum exposure

The following tables reconcile the opening and closing balances for gross carrying amount and the maximum exposure for loans to customers at amortised cost and financial commitments. Maximum exposure to credit risk is the gross carrying amount of loans to customers plus off-balance exposure, which mainly includes guarantees, unutilised credit lines and loan offers. Reconciling items include the following:

- Transfers between stages due to significant changes in credit risk.
- Changes due to the derecognition of loans and financial commitments during the period.
- Changes due to the origination of new financial instruments during the period.
- Exchange rate effect from consolidation and other changes affecting the gross carrying amount and maximum exposure.

Loans to customers at amortised cost

| <i>Amounts in NOK million</i> | Stage 1 | Stage 2 | Stage 3 | Total |
|---|------------------|----------------|---------------|------------------|
| Gross carrying amount as at 1 January 2022 | 1 566 150 | 112 099 | 30 453 | 1 708 702 |
| Transfer to stage 1 | 94 566 | (89 918) | (4 647) | |

Note G10 Development in accumulated impairment of financial instruments

The following tables reconcile the opening and closing balances for accumulated impairment of loans to customers at amortised cost and financial commitments. Reconciling items includes the following:

- Transfers between stages due to significant changes in credit risk. The transfers are presumed to occur before the subsequent remeasurement of the allowance.
- Changes due to transfers between 12-month expected credit loss in stage 1 and lifetime expected credit loss in stages 2 and 3.
- Changes in allowance due to the origination of new financial instruments during the period.
- Increases and decreases in expected credit loss resulting from changes in input parameters and assumptions, including macro forecasts, as well as the effect of partial repayments on existing facilities and the unwinding of the time value of discounts due to the passage of time.
- Changes in allowance due to the derecognition of financial instruments during the period.
- Write-offs, exchange rate effect from consolidation and other changes affecting the expected credit loss.

Loans to customers at amortised cost

Note G12 Market risk

Market risk is the risk of losses or reduced future income due to fluctuations in market prices or exchange rates. The risk arises as a consequence of the Group's unhedged transactions and exposure to the markets for foreign exchange, property, interest rates, commodities, credit and equity. The risk level is determined by market price volatility and the size of the exposure.

DNB quantifies risk by calculating economic capital for the individual risk categories and for the DNB Group's overall risk. Economic capital for market risk should cover all potential market risk losses at a confidence level of 99.9 per cent for the next 12 months. Exposures included in the model can be either actual exposures or limits.

The economic capital for total market risk in the DNB Group excluding DNB Livsforsikring AS was NOK 9.5 billion at the end of 2023, compared with NOK 10.1 billion at the end of 2022. The reduction is due to lower calculated economic capital for equity investments.

Market risk, excluding strategic ownership, represented 6.5 per cent of total economic capital at year-end 2023, which is within the limit of the Group's risk appetite.

The market risk in DNB Livsforsikring AS is managed separately, see note G42.

Note G13 Interest rate sensitivity

Interest rate sensitivity for different time intervals

The value of items on and off the balance sheet is affected by interest rate movements. The table shows potential losses for DNB Group excluding DNB Livsforsikring AS and DNB Bank Polska S.A resulting from parallel one percentage point changes in all interest rates. The calculations are based on a hypothetical situation where interest rate movements in all currencies are unfavourable for DNB relative to the Group's positions. Also, all interest rate movements within the same interval will be unfavourable for the Group. The figures will thus reflect maximum losses for DNB.

The calculations are based on the Group's positions as at 31 December and market rates on the same date. The table does not include administrative interest rate risk and interest rate risk tied to non-interest-earning assets.

| <i>Amounts in NOK million</i> | Up to 1 month | From 1 month to 3 months | From 3 months to 1 year | From 1 year to 5 years | Over 5 years | Total |

| Other currencies | 3 | 33 | 9 | 4 | 4 | 44 |

The interest rate risk in DNB Livsforsikring AS is dealt with separately, see note G42 Insurance liabilities.

Note G14 Currency positions

The table shows net currency positions as at 31 December, including financial derivatives. Foreign exchange risk related to investments in subsidiaries is included in the currency position by the amount recorded in the accounts.

In DNB Livsforsikring foreign currency exposure arises when the company invests parts of its securities portfolio and property portfolio in the international securities market. Under DNB Livsforsikring's current foreign currency hedging strategy, the total foreign currency exposure is reduced to a minimum.

Note G15 Financial derivatives and hedge accounting

The majority of derivative transactions in DNB relate to transactions with customers, where DNB enables them to transfer, modify, take or reduce prevailing or expected risk. Derivatives are also used to hedge currency and interest rate risk arising in connection with funding and lending. In addition, Markets conducts derivative trading for their own account and also acts as market maker. A market maker is obliged to furnish both offer and bid prices with a maximum differential between offer and bid price, together with a minimum volume. Market makers always trade for their own account.

DNB uses a range of financial derivatives for both trading and hedging purposes. "Over the counter" (OTC) derivatives are contracts entered into outside an exchange, where terms are negotiated directly with the counterparties. OTC derivatives are usually traded under a standardised International Swaps and Derivatives Association (ISDA) master agreement between DNB and its counterparties. Exchange-traded derivatives are derivative contracts with standardised terms for amounts and settlement dates, which are bought and sold on regulated exchanges.

Risk related to financial derivatives

Derivatives are traded in portfolios which also include balance sheet products. The market risk on derivatives is handled, monitored and controlled as an integral part of the market risk of these portfolios. See note G12 Market risk. Derivatives are traded with many different counterparties and most of these are also engaged in other types of business with DNB. The credit risk arising in connection with derivatives trading is included in the total credit risk measurement of the DNB Group. Netting and margining agreements are entered into with a number of counterparties, thus reducing credit risk. The authorities' capital adequacy requirements take into account netting agreements and similar bilateral agreements, resulting in a reduction of capital adequacy requirements. Most OTC derivatives with financial counterparties are cleared at a central counterparty clearing house. See note G4 Credit risk management for a description of counterparty risk.

DNB uses basis swaps and cross currency interest swaps to convert foreign currency borrowings into the desired currency. As a typical example, DNB raises a loan in euro and converts it into US dollars through a basis swap. In this example DNB pays a US dollar interest rate based on a swap curve and receives a euro interest rate reduced or increased by a margin. The basis swaps are financial derivatives measured at fair value. There may be significant variations in the value of the basis swaps from day to day, due to changes in basis swap spreads. This unhedged risk causes unrealised gains and losses. For the year 2023, there was a negative mark-to-market effect of NOK 612 million, compared with a positive mark-to-market effect of NOK 822 million in 2022.

Note G15 Financial derivatives and hedge accounting (continued)

Use of financial derivatives in DNB Livsforsikring

The purpose of employing financial derivatives in DNB Livsforsikring is to be able to invest and allocate funds in accordance with the company's expectations of market trends, through swift and cost-effective asset and market exposure. In addition, the application of derivatives facilitates active risk management and adjustments in equity, interest rate and foreign exchange risk. DNB Livsforsikring does not apply hedge accounting. See notes G13 Interest rate sensitivity and G14 Currency positions for a further description.

Hedge accounting

DNB applies fair value hedge of interest rate risk on investments in fixed rate commercial papers and bonds in foreign currency, issued bonds and subordinated debt with fixed interest in foreign currency and net investment hedge of investments in foreign operations. Both derivative and non-derivative instruments are designated as hedging instruments in the hedge relationships that qualify for hedge accounting.

In fair value hedges of interest rate risk, the interest rate exposure on fixed-rate investments and borrowings is converted to floating rates. Only the interest rate component is hedged. Interest rate swaps are used to hedge the interest rate component, where the change in fair value is a result of the changes in the swap interest rate.

The critical terms of the hedging instruments and the hedging objects are set to match at the inception of the hedge and the hedge ratio is 1:1. Consequently, there was no significant hedge ineffectiveness during the year.

Fair value hedges of interest rate risk as at 31 December 2023

| <i>Amounts in NOK million</i> | Balance sheet item | Carrying amount | Accumulated fair value adjustment of the hedged item | Value changes used for calculating hedge ineffectiveness |
|-------------------------------|----------------------------|-----------------|--|--|
| Hedged exposure | | | | |
| Investments in bonds | Commercial paper and bonds | 106 245 | (2 743) | 2 824 |
| Issued bonds | Debt securities issued | 316 268 | (15 229) | (14 549) |
| Issued bonds, non-preferred | Debt securities issued | 94 929 | (3 250) | (2 984) |
| Subordinated debt | Debt securities issued | 19 778 | 116 | (90) |
| Hedging instrument | | | | |
| Interest rate swaps | Financial derivatives | | | 14 483 |

Fair value hedges of interest rate risk as at 31 December 2022

| <i>Amounts in NOK million</i> | Balance sheet item | Carrying amount | Accumulated fair value adjustment of the hedged item | Value changes used for calculating hedge ineffectiveness |
|-------------------------------|----------------------------|-----------------|--|--|
| Hedged exposure | | | | |
| Investments in bonds | Commercial paper and bonds | 82 853 | (5 786) | (5 680) |
| Issued bonds | Debt securities issued | 382 755 | (27 210) | 38 185 |
| Issued bonds, non-preferred | Debt securities issued | 55 574 | (5 721) | 4 011 |
| Subordinated debt | Debt securities issued | 18 036 | (314) | (83) |
| Hedging instrument | | | | |
| Interest rate swaps | Financial derivatives | | | (36 406) |

The accumulated amount of fair value hedge adjustments remaining in the balance sheet for hedged items that have ceased to be adjusted for hedging gains and losses is NOK 20 million as at end-December 2023.

Note G15 Financial derivatives and hedge accounting (continued)

Residual maturity of interest rate swaps held as hedging instruments as at 31 December 2023

| Amounts in NOK million | Maturity | | | | |
|--|---------------|--------------------------|-------------------------|------------------------|--------------|
| | Up to 1 month | From 1 month to 3 months | From 3 months to 1 year | From 1 year to 5 years | Over 5 years |
| Fair value hedges of interest rate risk, nominal values | | | | | |
| Investments in bonds | 168 | | 9 644 | 97 290 | 3 219 |
| Hedges of issued bonds | 11 456 | 13 217 | 54 636 | 280 557 | 68 416 |
| Hedges of subordinated debt | | | | 18 497 | |

Residual maturity of interest rate swaps held as hedging instruments as at 31 December 2022

| Amounts in NOK million | Maturity | | | | |
|--|---------------|--------------------------|-------------------------|------------------------|--------------|
| | Up to 1 month | From 1 month to 3 months | From 3 months to 1 year | From 1 year to 5 years | Over 5 years |
| Fair value hedges of interest rate risk, nominal values | | | | | |
| Investments in bonds | 1 914 | 1 082 | 4 192 | 72 927 | 9 466 |
| Hedges of issued bonds | 17 480 | 10 234 | 99 581 | 259 487 | 85 139 |
| Hedges of subordinated debt | 1 867 | 6 594 | | 473 | 8 560 |

In net investment hedges of foreign operations foreign currency deposits and foreign currency borrowings are used as hedging instruments. These instruments are presented as deposits from customers and debt securities issued in the balance sheet. Instruments in EUR, USD, GBP and SEK are used to hedge the investments in the Group's subsidiaries with functional currencies of EUR, USD, GBP, SEK and DKK.

The total hedged exposure in the net investment hedges amounted to NOK 72 086 million at 31 December 2023. There was no significant hedge ineffectiveness during the year, since the foreign currency gains and losses on the hedged items are offset by the foreign currency gains and losses on the hedging instruments. The effects of the net investment hedge can be seen in the statement of changes in equity.

Any reclassifications from net investment hedge reserve to the income statement, due to for instance sales of subsidiaries, can be seen in the comprehensive income statement and the statement of changes in equity.

Note G16 Liquidity risk

Liquidity risk is the risk that the DNB Group will be unable to meet its obligations as they fall due or will be unable to meet its liquidity obligations without a substantial rise in costs.

The Group's risk appetite framework defines the limits for liquidity management in DNB. Over the last decade, DNB has drawn up internal risk appetite statements for the Liquidity Coverage Ratio (LCR), the Net Stable Funding Ratio (NSFR) and the loan-to-deposit ratio for the Group. In 2022, a new risk appetite statement on the minimum requirement for own funds and eligible liabilities (MREL) was introduced as well. Risk appetite is operationalised through DNB's liquidity strategy, which is reviewed at least annually by the Board of Directors. The liquidity strategy includes internal limits which restrict the short-term maturity of liabilities within different time frames. The various maturities are subject to stress testing based on a bank-specific crisis, a systemic crisis and a combination of these, and a contingency plan has been established to handle market events. In addition, limits have been set for structural liquidity risk, which implies that lending to customers should largely be financed through customer deposits, subordinated capital and long-term funding. Ordinary senior bond debt and covered bonds are the major sources of long-term funding.

The principles for Group liquidity risk management and control are set in the Group risk policy and further elaborated on in the Group instructions for management, reporting and control of liquidity risk. This instruction sets out detailed requirements for governance, accountability and responsibilities relating to monitoring, measurement, controls and reporting of liquidity risk. Group Treasury manages the liquidity risk on a daily basis, while Group Risk Management represents the independent second-line risk management function.

The short-term liquidity requirement (LCR) remained stable at above 100 per cent throughout the year and stood at 146.3 per cent at end-December 2023.

Note G16 Liquidity risk (continued)

In the table below, nominal future interest payments in excess of accrued interest are not included on the balance sheet date.

Residual maturity as at 31 December 2023

Note G23 Pensions

Description of the pension schemes

The DNB Group has a defined-contribution pension scheme for all employees in Norway, with the exception of around 195 employees from the former Postbanken who are covered by a closed, group pension plan in the Norwegian Public Service Pension Fund.

The contribution rates are:

- Salary equivalent to 0 to 7.1 times the National Insurance basic amount, G: 7 per cent
- Salary equivalent to 7.1 to 12 times G: 15 per cent
- The Group has no defined-contribution pension scheme for salaries exceeding 12G (apart from the closed scheme for employees from before 2008)

Employees who were enrolled in the former defined-benefit pension schemes (terminated between 2015 and 2017) are also covered by a compensation scheme that is structured as a supplementary, contribution-based direct pension scheme.

Based on the terms and conditions approved at the time of conversion, the savings plan in the compensation scheme aims to give the individual employee a total pension capital when reaching the age of 67 corresponding to what he or she would have received if the defined-benefit pension scheme had been retained. Both the pension entitlements and the return on the pension funds are funded through operations.

The DNB Group has a disability pension scheme for all employees in Norway. The disability pension represents:

- 3 per cent of pensionable income up to 12G
- 25 per cent of G, maximum 6 per cent of pensionable income, up to 12G
- 66 per cent of pensionable income in the interval between 6G and 12G

The Norwegian companies in the Group are part of the contractual early retirement pension (AFP) scheme for the private sector. In addition, the Group has an agreement on contractual early retirement pension according to public sector rules for employees who are members of the Norwegian Public Service Pension Fund.

The private early retirement pension scheme will be funded through an annual premium established as a percentage of salaries between 1 and 7.1G.

Note G23 Pensions (continued)

Employer's contributions and financial activities tax are included in pension expenses and commitments.

Subsidiaries and branch offices outside Norway have separate schemes for their employees, mainly in the form of defined-contribution pension schemes. Pension expenses for employees outside Norway represented NOK 221 million.

Economic assumptions applied in calculating pension expenses and commitments are in accordance with the guidance from the Norwegian Accounting Standards Board per 31 December 2023.

| Pension commitments | 10-17 | 14-17 | 16-18 | 12-16 | 10-14 | 10-14 | 3 | 3 |
| Net pension expenses for the period | 17-20 | 18-20 | 16-18 | 16-18 | 10-14 | 9-11 | 3 | 3 |

Note G24 Taxes

Tax expense on pre-tax operating profit

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|-------------------------------|-----------------|----------------|
| Current taxes | (9 858) | (3 461) |
| Changes in deferred taxes | (953) | (3 950) |
| Tax expense | (10 811) | (7 411) |

Reconciliation of tax expense against nominal tax rate

| <i>Amounts in NOK million</i> | | |
|---|-----------------|----------------|
| Pre-tax operating profit | 50 440 | 40 579 |
| Estimated tax expense at nominal tax rate 22 per cent | (11 097) | (8 927) |
| Tax effect of financial tax in Norway ¹ | (954) | (847) |
| Tax effect of different tax rates in other countries | (51) | 31 |
| Tax effect of debt interest distribution with international branches ² | 2 464 | 505 |
| Tax effect of tax-exempt income from shareholdings ³ | 215 | 244 |
| Tax effect of other tax-exempt income and non-deductible expenses | (319) | 592 |
| Tax effect reclassified from other comprehensive income statement | | 1 284 |
| Tax effect of changed tax rate for deferred taxes recognised in the balance sheet | 27 | (4) |
| Tax related to previous years ⁴ | (1 096) | (289) |
| Tax expense | (10 811) | (7 411) |
| Effective tax rate | 21% | 18% |

Income tax on other comprehensive income

| <i>Amounts in NOK million</i> | | |
|---|--------------|------------|
| Items that will not be reclassified to the income statement | 117 | 52 |
| Hedges of net investments | 961 | 720 |
| Total income tax on other comprehensive income | 1 078 | 772 |

- 1) The financial activities tax is an additional tax imposed on companies within the financial services sector. This tax represents an increased income tax rate of 3 percentage points for financial institutions.
- 2) In 2023, the debt interest distribution resulted in an interest deduction in Norway which reduced the tax expenses for the Group by NOK 2 464 million, compared with NOK 505 million in 2022. The increased deduction in 2023 follows from higher activity and a higher interest rate level in the United States.
- 3) In Norway, a company's income from share investments is normally exempt from tax. As a rule, this applies to investments in companies domiciled in the EU/EEA. The tax exemption applies to both dividends and gains/ (losses) upon realisation. However, 3 per cent of dividends from tax-exempt investments is included in taxable income.
- 4) The tax treatment of the liquidation of the Group's subsidiary in Singapore in 2022 has been assessed as uncertain, and after a new assessment, DNB has recognised provisions in the accounts based on its best estimate in the case.

Note G24 Taxes (continued)

Deferred tax assets/(deferred taxes)

| Additions through acquisitions | 22 | (5) |
| Changes due to group contribution | (2 050) | (4 350) |
| Deferred tax assets/(deferred taxes) as at 31 December | (2 334) | (1 545) |

Deferred tax assets and deferred taxes in the balance sheet relates to the following temporary differences

| <i>Amounts in NOK million</i> | Deferred tax assets | | Deferred taxes | |
|--|---------------------|--------------|----------------|--------------|
| | 31 Dec. 2023 | 31 Dec. 2022 | 31 Dec. 2023 | 31 Dec. 2022 |
| Fixed assets and intangible assets | (166) | (107) | 4 765 | 3 133 |
| Commercial paper and bonds | 143 | 140 | (1 252) | (1 732) |
| Debt securities issued | | | 4 684 | 8 578 |
| Financial derivatives | | | (2 207) | (4 098) |
| Net pension liabilities | 46 | 47 | (1 264) | (1 093) |
| Insurance liabilities (IFRS 17) | | | (2 060) | (2 386) |
| Net other tax-deductible temporary differences | 59 | 55 | 814 | 813 |
| Tax losses and tax credits carried forward | 306 | 375 | (758) | (1 160) |
| Total deferred tax assets | 388 | 510 | 2 722 | 2 055 |

A significant share of the financial instruments are measured at fair value in the accounts, while for tax purposes, the same instruments are recorded on an accrual basis in accordance with the realisation principle. This gives rise to large differences between profits stated in the accounts and profits computed for tax purposes for the individual accounting years, especially in years with significant fluctuations in interest rate levels and exchange rates. These differences are offset in the longer term.

Due to large exchange rate fluctuations in 2023 and 2022, there were significant changes in unrealised gains and losses on financial instruments used in managing the Group's currency and interest rate risk. Financial instruments are recorded in accordance with the realisation principle, while the current rate method is used for receivables and liabilities in foreign currency. These differences are expected to be reversed within a short period of time.

Overview over deferred tax assets from tax losses and tax credits carried forward

| <i>Amounts in NOK million</i> | 31 December 2023 | | | 31 December 2022 | | |

1) All tax credits carried forward relates to tax payers in Norway.

Note G24 Taxes (continued)

Uncertain tax liabilities

Tax effect of debt interest distribution between DNB Bank ASA in Norway and international branch offices

In the second half of 2021, DNB Bank ASA received a decision from the tax authorities relating to the deduction of external interest expenses. According to Norwegian tax legislation, external interest expenses are to be distributed proportionally between DNB Bank ASA's operations in Norway and certain international branch offices, based on the respective entities' total assets. This could result in additions to or deductions from the bank's income in Norway. The decision covers the fiscal years 2015–2019 whereby the limitation of interest deduction in Norwegian taxation is calculated by including internal receivables. The decision involves a tax exposure of NOK 1.7 billion for the period in question. The estimated tax effect for the years 2020–2023 as a result of the decision amounts to a total of approximately NOK 180 million.

DNB disagrees with the tax authorities' interpretation of the legislation. Legal proceedings were initiated in 2021. The District Court ruled in DNB's disfavour in June 2022, and DNB appealed the decision. On 29 November 2023, the Court of Appeal ruled fully in favour of DNB. In January 2024, the Norwegian state appealed the judgment. On 22 February 2024, the Appeals Selection Committee of the High Court allowed that the appeal can be brought before the High Court. DNB is still of the opinion that it has a strong case, and no provisions have been recognised in the accounts.

Notice of change in the tax assessment for DNB Bank ASA for 2018–2022

On 27 February 2023, DNB Bank ASA received a notice from the Norwegian tax authorities of a change in the tax assessment of dividends received from its US subsidiary in 2019 and 2020. DNB has treated dividends received from the subsidiary as covered by the tax exemption method and has treated 3 per cent of the dividends as taxable income. The subsidiary is jointly taxed with the bank's branch office in New York. Due to the joint taxation, it is the tax authorities opinion that the US must be considered a low-tax country, and thus that the dividends should be considered taxable. In a low-tax country assessment, the tax authorities assess the operations of – and tax rules for – the subsidiary and the bank's branch office jointly, rather than considering the subsidiary in isolation. In the tax authorities' view, this gives an effective taxation that is less than two thirds of Norwegian taxation, and the tax authorities therefore consider the US to be a low-tax country. The tax authorities have also announced that payments from the subsidiary that relate to the company's share of the tax payment under the joint taxation are to be considered taxable dividends. In an updated notice of 19 December 2023, the tax authorities extended the number of years for the part that applies to the subsidiary's tax payments, so that payments for 2018, 2021 and 2022 are also covered. The notice means a total tax exposure of around NOK 1.8 billion for DNB for the period. DNB does not agree that the US should be regarded as a low-tax country, or that there are grounds for regarding the tax payments as taxable dividends, and for this reason no provisions have been recognised in the accounts.

Tax effect of the reorganisation of the lending activities in Sweden and the UK in 2015

In the second quarter of 2023, DNB Bank ASA received a draft decision from the Norwegian tax authorities relating to a reorganisation of the lending activities in Sweden and in the UK in 2015. The tax authorities questioned the valuation and calculation of taxable gains/losses relating to loan portfolios that were sold from branches of DNB Bank ASA to subsidiaries in Sweden and the UK. The Group's maximum tax exposure is estimated to be approximately NOK 1.2 billion. DNB disagrees with the Norwegian tax authorities' approach. It is DNB's view that it has a strong case, and no provisions have been recognised in the accounts.

Decision of change in tax assessment for DNB Livsforsikring for 2018

New tax rules for life insurance and pensions companies were introduced for the fiscal year 2018, with associated transitional rules. When the financial statements and tax return for DNB Livsforsikring were prepared in 2018, it was unclear how the transitional rules should be interpreted, and DNB Livsforsikring did not agree with the Norwegian Tax Administration's interpretation of the original wording of the law. Based on an overall assessment, the net tax effect associated with the transitional rules was included as a tax income of NOK 880 million for the Group. In the 2018 tax return, DNB Livsforsikring demanded a larger tax deduction than the tax effect recognised in the accounts.

In January 2022, DNB Livsforsikring received a final decision concerning a change in the tax assessment for 2018. DNB Livsforsikring will appeal the decision to Skatteklagenemnda (the Norwegian tax appeal board) within the deadline. On the basis of a new review of the matter, a tax expense of NOK 299 million was recognised in the accounts in 2021 related to the transition effect in 2018. The final outcome of the matter is uncertain and may result in either lower or higher tax deductions than those used as basis in the Group accounts. If the company does not win its case on any of the points, this will give a further increased tax expense of NOK 460 million related to the transition effect in 2018.

Pillar 2 income taxes

A minimum tax regime for multinationals, the Pillar 2 model rules, has been implemented in Norway, and other jurisdictions in which the Group operates, effective from 1 January 2024. Based on these model rules, the Group is required to calculate an effective tax rate (as defined in the Pillar 2 model rules) for each jurisdiction in which it operates, and to pay a top-up tax that is the difference between the calculated effective tax rate for each jurisdiction and a 15 per cent minimum tax rate.

The Group has applied the mandatory exception to recognising and disclosing information about deferred tax assets and liabilities related to the implementation of the Pillar 2 model rules.

The assessment of the Group's potential exposure to Pillar 2 income taxes is based on the most recent tax filings and country-by-country reporting for the relevant entities in the Group. Based on the assessment, the Group's Pillar 2 effective tax rate is above 15 per cent in almost all jurisdictions in which it operates, and it has been assessed that the Group will not be subject to Pillar 2 top-up taxes in these jurisdictions. In a few jurisdictions, there is a risk that the Pillar 2 effective tax rate will be below 15 per cent in certain years. The Group does not expect any material exposure to Pillar 2 income taxes in these jurisdictions.

Note G25 Country-by-country reporting

Under CRD, a financial institution must, for each country in which it operates through a subsidiary or a branch office, disclose information about income, number of employees and pre-tax operating profit. DNB has not received any public subsidies that relate to the Group's activities as a financial institution. The table below contains consolidated figures by country, taken from the consolidated financial statements.

Amounts in NOK million

| Country | Business area ¹ | 2023 | | | | 2022 | | | |
|---------------------------|----------------------------|---------------------------|--------------------------|--------------------------|---|---------------------------|--------------------------|--------------------------|---|
| | | Total income ² | Pre-tax operating profit | Tax expense ³ | Full-time-equivalent staff ⁴ | Total income ² | Pre-tax operating profit | Tax expense ³ | Full-time-equivalent staff ⁴ |

| Eliminations | | 253 | | | | 495 | | | |
| Total | | 81 950 | 50 440 | (10 811) | 10 617 | 66 628 | 40 578 | (7 411) | 9 663 |

1) The split is based on business area/operational structure and not on DNB's segment reporting.

CB = Corporate Banking, PM = Personal Banking, WM = Wealth Management, M = Markets, O = Other.

2) Total income is defined as the sum of net interest income, and net other operating income.

3) Tax expense consists of current and deferred taxes.

4) Number of employees calculated on a full-time basis.

Note G25 Country-by-country reporting (continued)

DNB discloses the names of the Group's subsidiaries, associated companies and branches for each country where DNB is established in the table below. Please note that representation offices and entities held for sale are not disclosed in this table. Note P31 Investments in subsidiaries and note G35 Investments accounted for by the equity method also discloses the company names of the Group's significant subsidiaries and associated companies.

See note G28 Financial instruments at fair value for a general definition of the levels in the fair value hierarchy.

Loans to customers (levels 2 and 3)

Loans to customers in level 2 mainly consist of retail loans with floating interest rate measured at amortised cost. Since the fixed-rate period is very short, amortised cost is considered a good estimate of fair value. All other loans measured at amortised cost are classified in level 3.

The valuations of loans in level 3 are based on average margins in December, considered relative to the business units' best estimate of the potential margin requirement at year-end 2022, as if the loans had been originated at that time. Differentiated margin requirements have been calculated for each portfolio of loans.

A margin requirement is calculated for margin loans, and the difference between the margin requirement and the agreed margin is discounted over the average expected time to repricing of the loan.

Securities issued, non-preferred senior bonds and subordinated loan capital (levels 2 and 3)

The valuation in level 2 is based on observable market data in the form of interest rate curves and credit margins when available, while the valuation in level 3 is based on internal models. These instruments consist mainly of funding in foreign currency and floating rate securities in Norwegian kroner.

1) Short positions, trading activities.

The levels

Financial instruments are categorised within different levels based on the observability of the market data for the individual instruments. Transfers between levels in the fair value hierarchy are reflected as taking place at the end of each quarter. With respect to financial instruments categorised as level 2, the observability of market data may vary depending on whether the relevant instrument has been traded. Thus, it will be natural that some instruments are moved between level 2 and level 3. This applies primarily to commercial paper and bonds.

Level 1: Valuation based on quoted prices in an active market

Classified as level 1 are financial instruments valued by using quoted prices in active markets for identical assets or liabilities. Instruments in this category include listed shares and mutual funds, Treasury bills and commercial paper traded in active markets.

Level 2: Valuation based on observable market data

Classified as level 2 are financial instruments which are valued by using inputs other than quoted prices, but where prices are directly or indirectly observable for the assets or liabilities, including quoted prices in non-active markets for identical assets or liabilities.

Included in this category are, among others, interbank derivatives such as interest rate swaps, currency swaps and forward contracts with prices quoted on Reuters or Bloomberg, basis swaps between the currencies NOK, EUR, USD and GBP and cross-currency interest rate derivatives with customers with insignificant credit margins. Exchange-traded options are classified as level 2 if it is possible to scan or interpolate/extrapolate implicit volatility based on observable prices.

Level 3: Valuation based on other than observable market data

Classified as level 3 are financial instruments which cannot be valued based on directly observable prices. For these instruments other valuation techniques are used, such as valuation of assets and liabilities in companies, estimated cash flows and other models where key parameters are not based on observable market data.

Included in this category are loans to customers and instruments where credit margins constitute a major part of adjustments to market value.

Gains or losses, that occur when the estimated fair value is different from the transaction price (day-one gain/loss) has not had significant impact to the financial statement neither for 2023 nor 2022.

Note G28 Financial instruments at fair value (continued)

The instruments in the different levels

Loans to customers (level 3)

Loans in level 3 consist primarily of fixed-rate loans in Norwegian kroner. The value of fixed-rate loans is determined by discounting agreed cash flows over the term of the loan, using a discount factor adjusted for margin requirements. The discount factor used has as a starting point a swap rate based on a duration equal to the average remaining lock-in period for the relevant fixed-rate loans. The assumptions underlying the calculation of the margin requirement are based on a review of the market conditions on the balance sheet date and on an assessment of the deliberations made by external investors when investing in a corresponding portfolio.

Commercial paper and bonds (levels 2 and 3)

The valuation in level 2 is primarily based on observable market data in the form of interest rate curves, exchange rates and credit margins related to the individual credit and the characteristics of the bond or commercial paper. For paper classified as level 3, the valuation is based on indicative prices from third parties or comparable paper. Investments classified as level 3 primarily consist of corporate high-yield bonds with limited liquidity.

Equities including mutual fund holdings (levels 2 and 3)

Equities in level 2 comprise mutual fund holdings where the underlying investments are quoted equities, as well as a small volume of other mutual funds. Investments classified as level 3 consist of private equity funds, limited partnerships and unquoted equities. A common denominator for these investments is that there is a lag in the access to information from the units. In times of financial market turmoil, there may be considerable uncertainty related to the valuation of these investments

When determining the fair value of private equity, PE, investments, an industry standard prepared by the European Private Equity & Venture Capital Association, EVCA, is used. The method is considered to represent the best basis for the best estimate of fair values for investments in not very liquid equity instruments. The value of the PE funds on the balance sheet date is reported by the fund managers after the Group has finalised its accounts. Valuations in the consolidated accounts are thus based on valuations received for previous periods, adjusted for a reporting lag of approximately three months. The time lag is determined based on developments in a weighted index consisting of a stock market parameter, using MSCI World as reference index, along with a parameter for anticipated long-term returns on PE investments.

Financial assets, customers bearing the risk (level 2)

The item applies to unit-linked products in DNB Livsforsikring, and the value development of the underlying funds is available on a daily basis.

Financial derivatives (levels 2 and 3)

Financial derivatives classified as level 2 are primarily currency forward contracts and interest rate and currency swaps. The valuation is based on swap curves, and credit margins constitute a minor part of the value. In addition, the item comprises derivatives related to commodities and forward rate agreements. These are valued based on observable market prices. Derivatives classified as level 2 also comprise equity derivatives used in Markets' market-making activities. Most of these derivatives are related to the most traded equities on Oslo Børs, and the valuation is based on the price development of the relevant/underlying equity and observable or estimated volatility. Financial derivatives classified as level 3 are primarily connected to currency options, interest rate options in Norwegian kroner, as well as index derivatives. The valuation is based on indicative prices from third parties.

Deposits from customers (level 2)

The valuation of deposits carried at fair value includes primarily fixed-rate deposits. The valuation is based on measurement in relation to a swap curve, and changes in credit margins have an insignificant effect.

Debt securities issued and senior non-preferred bonds (level 2)

The valuation is primarily based on observable market data in the form of interest rate curves and credit margins. The item consists mainly of funding in Norwegian kroner. For fixed rate foreign currency funding, hedge accounting is used where hedges are entered into. In all other respects, debt securities issued and senior non-preferred bonds are carried at amortised cost.

Subordinated loan capital (level 2)

Subordinated loans carried at fair value consist of one loan in Norwegian kroner, and the valuation is based on observable interest rate curves and credit margins.

|--|----------------|-------------|-------------------|---------------------------|-------|--------|
| Carrying amount as at 31 December 2023 | 5 | 615 | 1 475 | 3 380 | 8 541 | 14 015 |
| Carrying amount as at 31 December 2022 | 11 | 1 539 | 2 905 | 4 229 | 8 059 | 16 744 |

Sensitivity analysis, level 3

An increase in the discount rate on fixed-rate loans by 10 basis points will decrease the fair value of loans to customers by NOK 110 million as at 31 December 2023 (NOK 128 million as at 31 December 2022). The effects on other Level 3 instruments are not material.

Level 3 equities represent a total of NOK 12 999 million in private equity investments, property funds, hedge funds and unquoted equities in DNB Livsforsikring as at 31 December 2023. The fair values of the funds are largely based on reported values from the fund managers. For private equity and property funds, the fund managers use cash flow-based models or multiples when determining fair values. The Group does not have full access to information about all elements in these valuations and thus has no basis for determining alternative values for alternative assumptions. The use of alternative values will have a limited effect on the Group's profits, as the investments are included in DNB Livsforsikring's common portfolio.

Note G29 Offsetting

The table below presents the potential effects of the group's netting arrangements on financial assets and financial liabilities.

| <i>Amounts in NOK million</i> | Gross amount | Amounts offset in the statement of financial position ¹ | Carrying amount | Netting agreements | Other collateral ² | Amounts after possible netting |
|---|--------------|--|-----------------|--------------------|-------------------------------|--------------------------------|
| Assets as at 31 December 2023 | | | | | | |
| Cash and deposits with central banks ³ | 26 522 | | 26 522 | | 26 522 | |
| Due from credit institutions ³ | 127 860 | 41 248 | 86 612 | | 86 612 | |
| Loans to customers ³ | 83 910 | | 83 910 | | 83 910 | |
| Financial derivatives ⁴ | 178 263 | | 178 263 | 25 421 | 69 379 | 83 463 |
| Liabilities as at 31 December 2023 | | | | | | |
| Due to credit institutions ³ | 125 158 | 41 248 | 83 910 | | 83 910 | |
| Deposits from customers ³ | 8 744 | | 8 744 | | 8 744 | |

|---|--------------|--------------|
| Repurchase agreements | 12 818 | 11 872 |
| Collateralised deposits other than repurchase agreements | 22 718 | 20 881 |
| Securities lending | 380 | 736 |
| Total liabilities | 35 916 | 33 489 |

Restricted assets

Local statutory capital requirements might restrict the ability of the Group to access or transfer assets freely to or from other entities within the Group and to settle liabilities within the Group.

Restrictions affecting the Group's ability to use assets:

- The Group has pledged assets to collateralise its obligations (pledged securities) and issued covered bonds (cover pool). The Group has pledged collateral in connection with derivative instruments, see note G15 Financial derivatives and hedge accounting for further information.
- The assets of consolidated structured entities (investment funds) are held for the benefit of the parties that have bought the notes issued by these entities. At year-end 2023 and 2022, assets related to holdings outside the Group represented NOK 2 059 million and NOK 14 509 million, respectively, which is reflected as a corresponding liability in the balance sheet.
- Assets held by DNB Livsforsikring AS are primarily held to satisfy the obligations to the company's policy holders. At year-end 2023 assets held by the company amounted to NOK 390 948 million, compared to NOK 366 184 million at year-end 2022. These assets include Financial assets, customers bearing the risk.
- Sbanken Boligkreditt AS had issued covered bonds with a carrying amount of NOK 30 056 million at year-end 2022.

Cover pool DNB Boligkreditt

| <i>Amounts in NOK million</i> | 31 Dec. 2023 | 31 Dec. 2022 |
|--|--------------|--------------|
| Pool of eligible loans | 662 690 | 683 646 |
| Market value of eligible derivatives | 10 343 | |
| Total collateralised assets | 673 033 | 683 646 |
| Debt securities issued, carrying value | 383 695 | 365 316 |
| Valuation changes attributable to changes in credit risk on debt carried at fair value | 26 | 33 |
| Market value of eligible derivatives | | 9 599 |
| Debt securities issued, valued according to regulation ¹ | 383 720 | 374 948 |
| Collateralisation (per cent) | 175.4 | 182.3 |

1) The debt securities issued are bonds with preferred rights in the appurtenant cover pool. The composition and calculation of values in the cover pool are defined in Sections 11-8 and 11-11 of the Financial Institutions Act with appurtenant regulations.

Note G32 Securities received which can be sold or repledged

Securities received

| <i>Amounts in NOK million</i> | 31 Dec. 2023 | 31 Dec. 2022 |
|---|----------------|----------------|
| Reverse repurchase agreements | | |
| Commercial paper and bonds | 232 255 | 130 062 |

| Shares | 38 022 | 37 672 |
| Total securities received | 270 277 | 167 734 |
| <i>Of which securities received and subsequently sold or repledged:</i> | | |
| Commercial paper and bonds | 61 226 | 20 307 |
| Shares | 29 579 | 31 052 |

Note G33 Assets and insurance liabilities, customers bearing the risk

| <i>Amounts in NOK million</i> | 31 Dec. 2023 | 31 Dec. 2022 |
|--|----------------|----------------|
| Mutual funds | 95 240 | 76 458 |
| Bond funds | 44 057 | 37 679 |
| Money market funds | 15 240 | 13 396 |
| Combination funds | 5 868 | 5 251 |
| Bank deposits | 1 539 | 1 812 |
| Investment properties | 4 778 | 3 663 |
| Total assets, customers bearing the risk | 166 722 | 138 259 |
| Total insurance liabilities, customers bearing the risk | 166 722 | 138 259 |

Assets, customers bearing the risk, comprises financial assets and investment properties, and covers assets held by DNB Livsforsikring on behalf of policyholders. The assets consist of deposits received through defined-contribution pensions and unit-linked insurance contracts. The assets are measured at fair value through profit and loss. Each asset has a corresponding liability, as the policyholder is entitled to the value of the underlying assets. The net effect of the fair value changes on the Group's profit and loss is therefore zero.

Defined-contribution pensions contracts are group pension schemes where the employees bear the financial risk. However, full or partial hedging of the paid amount can be bought. If a member is disenrolled from the pension agreement, a pension capital certificate is issued, which secures the retirement pension capital.

Individual unit-linked insurance contracts are endowment insurance policies or annuity insurance policies where policyholders bear the financial risk.

Note G34 Investment properties

| <i>Amounts in NOK million</i> | 31 Dec. 2023 | 31 Dec. 2022 |
|--|-----------------|-----------------|
| DNB Livsforsikring | 14 750 | 20 520 |
| Properties for own use | (5 740) | (6 424) |
| Other investment properties ¹ | 444 | 555 |
| Total investment properties | 9 454 | 14 651 |

1) Other investment properties are mainly related to acquired companies.

Investment properties in DNB Livsforsikring

Investment properties in DNB Livsforsikring are part of the common portfolio and are owned with the intention of achieving long-term returns for policyholders. The property portfolio is measured at fair value on the balance sheet date. The investment properties are predominantly located in Oslo and other central Norwegian cities. The properties are valued using an internal valuation model, and are thus classified at level three in the valuation hierarchy. As a supplement, external appraisals are obtained for a representative selection of properties in the portfolio at regular intervals throughout the year. This selection represents close to 95 per cent of the value of the portfolio.

In the internal model, fair value is calculated as the present value of future cash flows during and after the contract period. The required rate of return stipulated in the model reflects market risk. At the end of 2023, a required rate of return of 8.5 or 8.7 per cent was generally used. However, certain individual assessments of the required rate of return are made at segment level. The model uses the same required rates of return for cash flow both during and after the contract period.

Specific property risk is reflected in the cash flow through contractual rent, future market rent, operating expenses, required investments, adaptations for new tenants upon expiry of the contract, vacancy risk and adjustments for future price inflation, (Norges Bank's inflation target, CPI). Specific property risk is borne by the policyholders, except to the extent that the aggregate common portfolio, including investment properties and financial assets, should achieve actual returns that are lower than the guaranteed rate of return. See note G42 Insurance liabilities for a closer description of risk in the Group's insurance operations.

During 2023, total contractual rent for the wholly-owned portfolio in Norway increased by NOK 32 million to NOK 950 million, while the estimated market rent for the same portfolio went up by NOK 36 million to NOK 1 001 million.

At year-end 2023, economic vacancy in the portfolio was 2.8 per cent, compared with 3.2 per cent a year earlier.

The valuations resulted in a NOK 1 698 million impairment of the property portfolio in 2023.

Amounts included in the income statement

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|--|------------|------------|

1) Other investments include investments in real estate companies in DNB Livsforsikring of NOK 4 077 million (NOK 5 064 million in 2022), owned in the common/customer portfolio.

2) Values in the accounts of associated companies. Preliminary and unaudited accounts have been used.

3) Include deferred tax positions and value adjustments not reflected in the company's balance sheet.

4) Including dividends.

Transactions 2023

There were no significant transactions in 2023.

Transactions 2022

On 1 November 2022, the companies Vipps AS and MobilePay AS were merged. Before the merger, the company Vipps Holding AS was established, and DNB Bank ASA received shares in Vipps Holding AS in exchange for its shares in Vipps AS. As part of these transactions, DNB Bank ASA has participated in issues relating to Vipps Holding AS in 2022. Prior to the merger, Vipps Holding AS owned 100 per cent of the shares in the Vipps Group. Following completion of the merger, Vipps Holding owns 72.22 per cent of the shares in Vipps AS, and Danske Bank owns 27.78 per cent. As a result of this, the DNB Group now has a lower indirect ownership interest in Vipps AS, which amounted to 33.84 per cent at the end of the year. In Vipps Holding AS, a gain has been calculated as a result of the NOK 851 million transaction, which amounts to NOK 400 million for the DNB Group and is included in the Group's share of profit after tax in 2022.

In 2022, the DNB Group's ownership interest in Vipps Holding AS increased from 45.0 per cent to 46.9 per cent as part of the acquisition of Sbanken in March 2022. In addition, there were some minor changes as a result of the fact that not all Norwegian banks participated in capital increases in connection with the merger between Vipps AS and MobilePay AS.

Goodwill

The risk-free interest rate is set at 3.5 per cent, the market risk premium is set at 5.0 per cent, and the long-term growth factor is set at 2.0 per cent for all cash-generating units. Beta values are estimated separately for each cash-generating unit. Required rate of return is before tax. The recoverable amount in the goodwill impairment test is based on a value in use calculation, where DNB discounts expected future cash flows for each cash-generating unit. The calculations are based on historical results and plan figures approved by management.

Goodwill per unit

| | 31 December 2023 | | 31 December 2022 | |
|-----------------------|--|--------------------------------|--|--------------------------------|
| | Required rate of return <i>Per cent</i> | Recorded <i>NOK million</i> | Required rate of return <i>Per cent</i> | Recorded <i>NOK million</i> |
| Personal customers | 12.7 | 5 008 | 12.0 | 5 008 |
| DNB Asset Management | 12.7 | 1 679 | 12.0 | 1 679 |
| Other | 12.7 | 1 712 | 12.0 | 1 677 |
| Total goodwill | | 8 399 | | 8 364 |

Personal customers

This unit encompasses banking operations (loans and deposits) for personal customers in the regional network in Norway. Goodwill relates to the acquisition of Sbanken, the merger between DnB and Gjensidige NOR and the acquisition of Nordlandsbanken. In addition, some goodwill remains from previously acquired offices in Gjensidige NOR. Key assumptions for cash flows during the plan period are developments in margins, volumes and impairment of loans.

DNB Asset Management

The unit includes asset management operations, mainly in Norway and Sweden. Total goodwill from units in the operational area is assessed collectively, and the cash-generating unit represents the entire operational area. Operations are integrated, and synergies and rationalisation effects have been realised throughout the organisation. The most critical assumptions for cash flows during the plan period are developments in the securities markets, net sales of mutual funds and margins.

1) Based on cost less any residual value, other assets are subject to straight-line depreciation over their expected useful life within the following limits:

| | |
|-------------------------|------------|
| Technical installations | 10 years |
| Machinery | 3-10 years |
| Fixtures and fittings | 5-10 years |
| Computer equipment | 3-5 years |
| Means of transport | 5-7 years |

DNB Bank ASA has not placed any collateral for loans/funding of fixed assets, including property.

Note G38 Leasing

DNB Finans offers operational and financial leasing contracts, fleet management and loans to corporate customers, public sector entities and consumers in Norway, Sweden, Denmark and Finland. The business is conducted through vendor partnerships and direct sales, in close cooperation with the client advisers in DNB Bank where possible. Focus is on financing standard assets where there is an existing and functioning second hand market. The largest asset class in the portfolio is passenger cars and LCVs. Other large asset classes are buses, trucks and trailers and construction equipment and machinery.

1) Excluding own bonds. Nominal amount of outstanding covered bonds in DNB Boligkreditt was NOK 395.1 billion as at 31 December 2023. The cover pool market value represented NOK 673.0 billion.

2) Including accrued interest, fair value adjustments and premiums/discounts.

3) The maturity profile is based on the call date, i.e. DNB's first option to redeem the bond.

Note G42 Insurance liabilities

In the Group, insurance contracts are held by the wholly owned subsidiary DNB Livsforsikring AS (a life insurance company). All figures in this note represent the Group's insurance liabilities, except for references to solvency capital, which is disclosed for the subsidiary DNB Livsforsikring AS.

Insurance contracts

The insurance contracts include traditional guaranteed products, risk pension and employer's liability insurance. The portfolio of traditional guaranteed products is closed for new business, which means that it is in run-off.

Traditional guaranteed products

The largest portfolios under this category are the defined-benefit pension and paid-up policies.

A defined-benefit pension may include a retirement pension, disability pension, spouse's pension, cohabitant's pension or child's pension. Under a retirement pension, the payments are disbursed from an agreed age and for long as the insured lives. It may also be agreed that the pension payments cease at a certain age. In addition to the savings-premium, a premium payment is made in advance for interest rate risk, insurance risk and administration. Defined-benefit pensions include an annual guaranteed rate of return to the policyholder. The distribution to the policyholder is defined in the Norwegian act on insurance activities, and the company can use buffer accounts to achieve the guaranteed rate of return.

When a member withdraws from a pension agreement or a pension agreement ends, the member is entitled to a paid-up policy. Rights earned on the termination date are continued in paid-up policies. Paid-up policies have a separate profit-distribution model. The company can, as defined-benefit pensions, use additional allocations to achieve the guaranteed rate of return.

Risk pensions

A risk pension is linked to a defined-contribution pension, and may include a waiver of contribution, disability pension, spouse's pension, cohabitant's pension or child's pension. The waiver of contribution is mandatory for all enterprises in Norway.

Employer's liability insurance

Employer's liability insurance is a one-year risk product. This may be corporate group life insurance, accident insurance or health insurance. Occupational injury insurance is mandatory for all enterprises in Norway.

Risk in insurance contracts

Risk in insurance contracts includes financial risk and insurance risk, in addition to operational risk and business risk. Financial risk comprises credit and market risk. Market risk consist of risk linked to share price, interest rates and property. Insurance risk mainly relates to changes in future insurance payments due to changes in life expectancy (mortality) and disability rates. Risk in insurance contracts is divided, to varying degrees, between policyholders and the company.

Market risk

The main risk is that the return on financial assets will not be sufficient to meet the obligations specified in insurance policies, which includes the annual guaranteed rate of return. The weighted average guaranteed rate of return on the traditional products as a percentage of the premium reserve, premium fund and additional allocations, was 2.9 per cent as at 31 December 2023, compared to 3.0 per cent as at 31 December 2022. If the return for any year is below the guaranteed rate of return, the company can use available buffer accounts to cover the deficits; otherwise, the company must compensate for the shortfall.

Insurance risk

Insurance risk arises when actual data for mortality, disability and claims deviates from the assumptions underlying the calculation base for premiums and provisions. For instance, a general increase in life expectancy or disability rates will lead to increased payouts under the insurance contract. As a result, the profitability may decline if mortality experience or disability experience differ significantly from the pricing expectations.

Liquidity risk

Liquidity risk is the risk that DNB will be unable to meet its obligations as they fall due or will be unable to meet its liquidity obligations without a substantial rise in associated costs. DNB manages liquidity risk to ensure that sufficient liquid funds are always available to meet its obligations. The insurance liabilities have an average long duration compared to the asset placements with relatively short duration. Liquidity risk has generally been assessed to be low for insurance liabilities.

The table below presents a maturity analysis of the Group's insurance contracts, which reflects the time intervals for the present value of expected future cash flows.

| <i>Amounts in NOK million</i> | Payable on demand | Up to 1 year | From 1 year to 2 years | From 2 years to 3 years | From 3 years to 4 years | From 4 years to 5 years | Over 5 years | Total |
|---------------------------------|----------------------|-----------------|------------------------------|-------------------------------|-------------------------------|-------------------------------|-----------------|---------|
| Maturity as at 31 December 2023 | 947 | 5 831 | 6 355 | 6 427 | 6 832 | 6 501 | 150 202 | 182 148 |
| Maturity as at 31 December 2022 | 1 089 | 6 824 | 6 794 | 7 124 | 6 380 | 6 138 | 153 452 | 186 712 |

Note G42 Insurance liabilities (continued)

Monitoring

DNB Livsforsikring uses among other things a risk appetite framework for risk management. The risk appetite is set with targets for capitalisation, market risk, insurance risk and operational risk. The Board of Directors sets annual limits for financial and insurance risk, in addition to the limits for risk appetite. The limits are followed up on an ongoing basis.

DNB Livsforsikring has entered into reinsurance agreements that protect against the risk of death and disability if disaster-like events occur. In addition, the return on the company's investments is assessed on an ongoing basis. This includes assessments relating to the realisation of investments to achieve a sufficient return to meet the annual guaranteed rate of return, as well as the provision/use of additional allocations.

Insurance liabilities

The insurance liabilities for the general measurement model (GMM) and variable fee approach (VFA) are estimated based on the fulfilment cash flow, with the addition of the contractual service margin (CSM).

The table below shows the insurance liabilities for each measurement method.

| <i>Amounts in NOK million</i> | 31 December 2023 | 31 December 2022 |
|------------------------------------|---------------------|---------------------|
| Variable fee approach (VFA) | 186 392 | 192 634 |
| General measurement model (GMM) | 5 710 | 5 082 |
| Premium allocation approach (PAA) | 3 217 | 2 899 |
| Total insurance liabilities | 195 319 | 200 615 |

The following table shows the movements in the insurance liabilities analysed by measurement components, and includes contracts measured under GMM and VFA.

| <i>Amounts in NOK million</i> | 2023 | | | | 2022 | | | |
|--|------------------------------------|-----------------|--------|----------|------------------------------------|-----------------|---------|----------|
| | Present value of future cash flows | Risk adjustment | CSM | Total | Present value of future cash flows | Risk adjustment | CSM | Total |
| Insurance liabilities VFA and GMM as at 1 Jan. | 184 389 | 1 800 | 11 527 | 197 716 | 206 969 | 1 919 | 5 021 | 213 909 |
| Changes that relate to current services | (74) | (204) | (977) | (1 255) | (57) | (200) | (1 040) | (1 297) |
| New contracts in the period - profitable | (141) | 22 | 119 | | (181) | 12 | 169 | |
| New contracts in the period - onerous | 127 | 14 | | 141 | 213 | 17 | | 229 |
| Changes that relate to future service that adjust the CSM | (188) | 354 | (166) | | (7 420) | 46 | 7 373 | |
| Changes that relate to future service that do not adjust the CSM | 110 | 13 | | 123 | (22) | 6 | | (17) |
| Insurance finance income or expense | 5 565 | | 7 | 5 572 | (4 981) | | 4 | (4 977) |
| Cash flows from premiums received | 2 948 | | | 2 948 | 2 650 | | | 2 650 |
| Cash flows from claims and other expenses paid ¹ | (13 143) | | | (13 143) | (12 781) | | | (12 781) |
| Insurance liabilities VFA and GMM as at 31 Dec. | 179 593 | 1 999 | 10 510 | 192 102 | 184 390 | 1 800 | 11 527 | 197 716 |

1) Of which NOK 12 156 million investment component (NOK 11 842 million in 2022).

The estimate of the present value of future cash inflows for onerous contracts in 2023 was NOK 130 million (NOK 179 million in 2022), while for claims and other insurance service expenses it was NOK 257 million (NOK 392 million in 2022). The estimate of the present value of future cash inflows for profitable contracts in 2023 was NOK 557 million (NOK 453 million in 2022), while for claims and other insurance service expenses it was NOK 417 million (NOK 272 million in 2022).

The tables below set out the yield curves used to discount the cash flows of insurance contracts. The forward rate converges towards the Ultimate Forward Rate (UFR) from the last liquid point of 10 years until 40 years. The UFR was 3.7 per cent as at 31 December 2023 and 3.7 per cent as at 31 December 2022.

| <i>Per cent</i> | 1 year | 5 years | 10 years | 15 years | 20 years |
|------------------|--------|---------|----------|----------|----------|
| Yield curve 2023 | 4.4 | 3.7 | 3.6 | 3.6 | 3.6 |
| Yield curve 2022 | 3.8 | 3.5 | 3.6 | 3.6 | 3.6 |

Note G42 Insurance liabilities (continued)

The changes that relate to future services, that adjust the CSM, were in 2023 and 2022 mainly driven by the interest rate changes during the period. Higher interest rates reduce the estimated present value of future cash flows and increase the CSM under the VFA, which is the dominant measurement approach.

The CSM at year-end 2023 consisted of NOK 10 503 million for contracts where the fair value approach was applied as at the transition date (NOK 11 459 million as at year-end 2022) and NOK 7 million for other contracts (NOK 67 million as at year-end 2022). For contracts where the fair value approach was applied as at the transition date, the change in current services for CSM was NOK 845 million (NOK 829 million in 2022) and the change in future service for CSM was negative by NOK 112 million (positive by NOK 7 267 million in 2022).

The following table sets out when the remaining CSM is expected to be recognised in profit and loss:

| <i>Amounts in NOK million</i> | 1 year or less | 2-3 years | 4-5 years | 6-10 years | More than 10 years | Total |
|-------------------------------|----------------|-----------|-----------|------------|--------------------|--------|
| CSM release | 762 | 1 397 | 1 245 | 2 529 | 4 578 | 10 510 |

The average duration of the contracts was 11.25 years at end-December 2023.

The following table specifies the composition of the carrying amount of the assets in the Group that are held in connection with the VFA and other insurance contracts, and which is mainly measured at fair value.

| <i>Amounts in NOK million</i> | 31 December 2023 | | | 31 December 2022 | | |
|--|------------------|--------------|-----------------|------------------|--------------|-----------------|
| | VFA | Other | Total portfolio | VFA | Other | Total portfolio |
| Commercial papers and bonds | 141 187 | 6 885 | 148 072 | 129 483 | 5 321 | 134 804 |
| Shareholdings | 10 949 | 1 521 | 12 470 | 22 144 | 1 574 | 23 718 |
| Investment properties | 8 041 | 285 | 8 326 | 13 614 | 483 | 14 097 |
| Fixed assets (owner-occupied properties) | 6 204 | 220 | 6 424 | 6 209 | 221 | 6 430 |
| Loans to customers | 6 000 | | 6 000 | 8 860 | | 8 860 |
| Other | 3 415 | 163 | 3 578 | 1 351 | 172 | 1 523 |
| Total assets | 175 794 | 9 075 | 184 869 | 181 661 | 7 771 | 189 432 |

Net insurance result

The following table specifies the major line items of the Net insurance result.

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|--|--------------|--------------|
| Insurance revenue | 3 932 | 3 895 |
| Contractual service margin for service provided | 977 | 1 040 |
| Risk adjustment for risk expired | 202 | 198 |
| Expected claims and other expenses | 1 036 | 994 |
| Insurance revenue from contracts measured under PAA | 1 718 | 1 662 |
| Insurance service expense, incl. operating expenses | (2 889) | (2 791) |
| Net revenue/expense from reinsurance contracts | 53 | 58 |
| Insurance service result | 1 096 | 1 162 |
| Investment income from underlying assets or pool of assets, measured at fair value | 5 745 | (4 920) |
| Insurance finance income or expense | (5 659) | 4 994 |
| Interest accreted to insurance contracts | (8 156) | (5 470) |
| Change in financial assumptions for contracts measured under GMM or PAA | 114 | 238 |
| Change in financial assumptions for contracts measured under VFA | 2 384 | 10 226 |
| Reinsurance finance income or expense | 1 | |
| Finance result, life insurance | 86 | 73 |
| Net insurance result | 1 183 | 1 236 |

Insurance revenues in 2023 consisted of NOK 2 017 million for contracts where the fair value approach was applied as at the transition date and NOK 1 915 million for other contracts.

Note G42 Insurance liabilities (continued)

Sensitivities

Each sensitivity is based on a change in the single parameter or assumption concerned, while holding all other assumptions constant. In practice, this is unlikely to occur, and changes in assumptions are expected to be correlated.

- Shareholdings: The fair value of shareholdings is reduced by 25 per cent. See Investment properties.
- Investment properties: The fair value of all investment properties is reduced by 10 per cent. Includes effect of investment properties presented as shareholdings in the balance sheet, where underlying assets are investment properties.
- Interest rate: The interest rate curve experiences a parallel upward or downward shift of 50 basis points for the initial ten years, representing the liquid part of the curve. After ten years the curve is extrapolated towards the UFR. Also includes effect on interest-rate instruments.
- Spread: The credit spreads are increased by 50 basis points. The liquidity premium of the discount curve is increased by 15 basis points. Also includes effect on interest-rate instruments.
- Mortality -10 per cent: The level of the best estimate for mortality is reduced by 10 per cent, reducing the mortality intensity for all the years of the projection. The trend is kept unchanged.
- Disability +10 per cent and reactivation -10 per cent: Best estimate for disability is increased by 10 per cent for all the years of the projection, while the reactivation is reduced by 10 per cent.

The following tables present information on how reasonably possible changes in assumptions regarding financial risk and insurance risk variables impact the CSM and profit or loss. All changes are based on DNB's assets and liabilities related to insurance contracts as at 31 December 2023. The effects shown below include the estimated annual release of the CSM.

| <i>Amounts in NOK million</i> | Change | Impact of the CSM | Impact on net insurance result |
|-------------------------------|--------|-------------------|--------------------------------|
| Shareholdings | -25% | (613) | (125) |

Solvency capital

Regulatory capital requirements for European insurance companies are specified in the Solvency II Directive.

The solvency capital requirement is set at a level to ensure that there is a 99.5 per cent probability that total losses, including insurance and financial losses, over a period of 12 months do not exceed the estimated capital requirement. The calculations take risk-mitigating measures and systems into consideration. The minimum requirement is set at a level to ensure that there is an 85 per cent probability that total losses over a period of 12 months will not exceed the estimated capital requirement. Regulations allow the use of transitional rules when calculating solvency capital. In December 2015, DNB Livsforsikring was given permission by Finanstilsynet to use the transitional rules for insurance provisions. This means that the company is allowed to use recorded insurance provisions instead of the market value of the liabilities. The transitional rules apply for 16 years, and will be reduced linearly, starting from 1 January 2017.

As at 31 December 2023, DNB Livsforsikring had a solvency margin of 248 per cent (with or without the transitional rules).

Note G42 Insurance liabilities (continued)

Solvency capital

| <i>Amounts in NOK million</i> | 31 Dec. 2023 | 31 Dec. 2022 |
|--|---------------|---------------|
| Capital group 1 | | |

Note G46 Equity

Share capital

The Annual General Meeting held on 25 April 2023 resolved a reduction in share capital by cancelling own shares and redeeming shares held by the Norwegian government. The cancellation of the shares was registered in the Register of Business Enterprises on 4 July 2023. The number of issued shares was reduced by 7 751 818 to 1 542 613 203.

The share capital of DNB Bank ASA at 31 December 2023 was NOK 19 282 665 038 divided into 1 542 613 203 shares, each with a nominal value of NOK 12.50. The share capital of DNB Bank ASA at 31 December 2022 was NOK 19 379 562 763 divided into 1 550 365 021 shares, each with a nominal value of NOK 12.50.

DNB Bank ASA has one class of shares, and all shares carry voting rights. Shareholders are entitled to receive the dividend proposed at any time and have one voting right per share at the company's general meeting.

The Board of Directors has proposed a dividend of NOK 16.00 per share for 2023, for distribution from 8 May 2024.

Own shares

The Annual General Meeting held on 25 April 2023 authorised the Board of Directors of DNB Bank ASA to repurchase up to 3.5 per cent of the company's share capital. In addition, DNB Markets was authorised to repurchase 0.5 per cent for hedging purposes. DNB Bank ASA has previously signed an agreement with the Norwegian government, represented by the Ministry of Trade, Industry and Fisheries, to ensure that the government maintains its 34 per cent ownership interest in DNB Bank ASA after completion of the buy-back programme(s).

A repurchase programme of 1.5 per cent, as well as 0.25 per cent for hedging purposes, was announced on 17 July 2023 and was completed on 18 October. On 19 October, a new programme of 1.0 per cent was announced, and which was completed on 21 December. On 22 December, a third programme of 0.75 per cent was announced. Under the third programme, DNB repurchased 355 935 shares up to 31 December 2023, representing 0.02 per cent of its issued shares, at an average price of NOK 213.22 per share.

Total repurchased shares in 2023 under the three buy-back programmes were 25 774 725 shares, representing 1.67 per cent of the issued shares, and at an average price of NOK 209.49. In addition, a proportion of the Norwegian government's holding, equivalent to 0.86 per cent of issued shares, will be redeemed after the Annual General Meeting in 2024, bringing total buy-backs to 2.53 per cent.

Note G47 Remunerations etc.

The table below shows remuneration to the Group Management team and the Board of Directors as at end-2023. The table has been designed to show rights earned during the period. In 2023, remuneration to the Group Management team has been carried out in line with The Board of Directors' guidelines for the remuneration of senior executives, adopted at the Annual General Meeting in 2022, and published on dnb.no.

In accordance with Section 6-16 b. (2) of the Norwegian Public Limited Liability Companies Act and the Norwegian regulations on guidelines and report on remuneration for directors, DNB will publish a separate report on remuneration to directors for presentation at the Annual General Meeting on 29 April 2024. In addition to detailed information on paid and pending remuneration to directors for the 2023 accounting year, the report on remuneration for directors will contain an overview of performance targets that form the basis for variable remuneration. Shareholdings and allocated shares will also be included.

| Loans to other employees | | | | | | | | 27 796 858 | |

1) Includes salary payments for the part of year the person concerned was a member of the Group Management Team.

2) Variable remuneration (excluding holiday pay) earned in 2023 for the period they were a member of Group Management. The company's variable remuneration scheme was changed in 2023, so that the schemes for individual variable remuneration and for Group bonus are mutually exclusive. For the Group EVPs, this means that the Group bonus is no longer a remuneration component from 2023. The CRO and the CCO do not receive individual variable remuneration. They therefore receive the Group bonus like other employees.

3) An agreement has been entered into with some members of the Group Management team concerning a fixed salary supplement, which will be allocated for share purchases (see description in Guidelines for the remuneration of senior executives on dnb.no).

4) Pension rights earned during the year (SCC). The calculation of pension entitlements is based on the same economic and actuarial assumptions as those used in note G23 Pensions.

5) Loans to shareholder-elected representatives are extended on ordinary customer terms. Loans to DNB employees are extended on special terms, which are close to ordinary customer terms.

6) Also a member of the Compensation and Organisation Committee.

7) Also a member of the Audit Committee and the Risk Management Committee.

8) Employee-elected board member.

See also note G48 Information on related parties for information on loans to and deposits from senior executives.

| Loans to other employees | | | | | | | | 25 387 043 | |

- 1) Variable remuneration earned in 2022, excluding holiday pay. The amount includes the Group bonus of NOK 25.5 thousand, which is paid according to defined allocation criteria to all permanent employees as at 31 December 2022.
- 2) An agreement has been entered into with some members of the Group Management team concerning a fixed salary supplement, which will be allocated for share purchases (see description in Guidelines for the remuneration of senior executives on dnb.no).
- 3) Pension rights earned during the year (SCC). The calculation of pension entitlements is based on the same economic and actuarial assumptions as those used in note G23 Pensions.
- 4) Loans to shareholder-elected representatives are extended on ordinary customer terms. Loans to DNB employees are extended on special terms, which are close to ordinary customer terms.
- 5) Also a member of the Compensation and Organisation Committee.
- 6) Also a member of the Audit Committee and the Risk Management Committee.
- 7) Employee-elected board member.

Remuneration to the statutory auditor

| <i>Amounts in NOK 1 000, excluding VAT</i> | 2023 | 2022 |
|--|-----------------|-----------------|
| Statutory audit ¹ | (43 740) | (36 127) |
| Other certification services | (3 715) | (4 461) |
| Tax-related advice ² | (1 339) | (1 559) |
| Other services | | (383) |
| Total remuneration to the statutory auditor | (48 793) | (42 530) |

- 1) Includes fees for interim review.
- 2) Mainly refers to tax-related advice to employees on international assignments.

Note G48 Information on related parties

The largest owner of the DNB Group is the Norwegian government, represented by the Ministry of Trade, Industry and Fisheries, which owns and controls 34 per cent of the shares in the parent company DNB Bank ASA. See note P44 Largest shareholders.

A large number of bank transactions are entered into with related parties as part of ordinary business transactions, comprising loans, deposits and foreign exchange transactions. These transactions are based on market terms. The table below shows transactions with related parties, including balance sheets at year-end and related expenses and income for the year. Related companies are associated companies plus DNB Savings Bank Foundation. See note G35 Investment accounted for by the equity method for a specification of associated companies. Loans to board members and their spouses/partners and under-age children are extended on ordinary customer terms. Loans to group management, like loans to other group employees, are extended on special terms, which are close to ordinary customer terms.

Transactions with related parties

| <i>Amounts in NOK million</i> | Group management and Board of Directors | | Related companies | |
|-------------------------------|---|------|-------------------|-------|
| | 2023 | 2022 | 2023 | 2022 |
| Loans as at 31 December | 158 | 141 | 463 | 421 |
| Deposits as at 31 December | 123 | 174 | 7 678 | 5 297 |
| Interest income | 6 | 3 | 2 | 5 |
| Interest expenses | 3 | (1) | 55 | 19 |

No impairments were made on loans to related parties in 2023 and 2022. See note G47 for other remunerations etc. to Group management and Board of Directors. Transactions with deputy members of the Board of Directors are not included in the table above. In general, DNB employee loans should be paid by automatic debit in monthly instalments in arrears. Employee loans are within the term limits applying to general customer relationships. Security is furnished for employee loans in accordance with legal requirements.

Note G49 Earnings per share

| | 2023 | 2022 |
|--|-----------|-----------|
| Profit for the year (NOK million) | 39 479 | 33 438 |
| Profit attributable to shareholders (NOK million) | 38 166 | 32 587 |
| Profit attributable to shareholders excluding operations held for sale (NOK million) | 38 315 | 32 317 |
| Profit from operations and non-current assets held for sale, after taxes (NOK million) | (149) | 270 |
| Issued shares opening balance (in 1000) | 1 550 365 | 1 550 365 |
| Average number of cancelled shares (in 1000) | 4 522 | |
| Average number of own shares (in 1 000) | 8 961 | 32 |
| Average number of outstanding shares (in 1 000) | 1 536 882 | 1 550 333 |
| Average number of outstanding shares, fully diluted (in 1 000) | 1 536 882 | 1 550 333 |
| Earnings/diluted earnings per share (NOK) | 24.83 | 21.02 |
| Earnings/diluted earnings per share excluding operations held for sale (NOK) | 24.93 | 20.85 |
| Earnings/diluted earnings per share, operations held for sale (NOK) | (0.10) | 0.17 |

The main purpose of the financial ratio earnings per share is to show the return for the Group's ordinary shareholders. Accumulated interest for the period, which will be paid to those investing in the additional Tier 1 capital instruments, has therefore been deducted from Profit for the period in the calculation of the period's earnings per share.

Note G50 Contingencies

Due to its extensive operations in Norway and abroad, the DNB Group will regularly be party to various legal actions and tax-related disputes. None of the current disputes are expected to have any material impact on the Group's financial position.

Legal risk associated with the legacy foreign currency portfolio in DNB Bank Polska S.A.

In June 2023, the Court of Justice of the European Union (CJEU) issued a judgment relating to legal proceedings against a Polish bank without ties to DNB concerning foreign currency loan agreements in Poland. The judgment clarified which claims the parties to a loan agreement can make against each other if a national court finds that a loan agreement is invalid. The CJEU's ruling is expected to affect other Polish banks with similar loan agreements. Based on the clarification from the CJEU, DNB Polska estimates that there is an increased legal risk associated with the legacy foreign currency portfolio. Total provisions at the end of the fourth quarter of 2023 were NOK 887 million (PLN 344 million). The Group has recognised the provisions by reducing the gross carrying amount in line with IFRS 9. If the recognised exposure is insufficient, the provisions will be recognised in accordance with IAS 37.

See also note G24 Taxes for further information about contingent tax liability.

1) Recorded under "Due from credit institutions" in the balance sheet.

Note P1 Accounting principles

Basis for preparation

DNB Bank ASA is the parent company in the DNB Group. DNB Bank ASA has prepared its financial statement according to the Norwegian Ministry of Finance's regulations on annual accounts, which implies that recognition and measurements are in accordance with IFRS. The only exception is that the regulations on annual accounts also give permission to recognise provisions for dividends and group contributions in subsidiaries as income and to record the Board of Directors' proposed dividends and group contributions as liabilities on the balance sheet date. Under IFRS, dividends should be classified as equity until approved by the general meeting.

Intra-Group merger

The merger of Sbanken ASA and DNB Bank ASA was completed on 2 May 2023.

The merger was completed with accounting and tax continuity. No additional consideration has been paid. As part of the merger, Sbanken's net assets were transferred to DNB Bank ASA for the sake of Group continuity in the parent company accounts, except for Sbanken's ownership of the wholly owned subsidiary Sbanken Boligkreditt AS and loans to customers measured at fair value through other comprehensive income (FVOCI) in the Sbanken ASA accounts, which were transferred with company continuity. Group continuity means that identified intangible assets and goodwill from the acquisition of Sbanken in March 2022, with a total book value of NOK 4.3 billion, are recognised in DNB Bank ASA's accounts as a result of the merger.

Comparative figures for DNB Bank ASA have not been restated. As a result of the merger, DNB Bank equity increased by NOK 950 million (including NOK 705 million in additional Tier 1 capital) at the date of completion.

Differences in the parent company's accounting principles compared with the Group's accounting principles

Investments in subsidiaries, associated companies, and joint ventures

In the financial statement of DNB Bank ASA, investments in subsidiaries, associated companies and joint ventures are recognised at cost. At the end of each reporting period, the company assesses whether any indication of impairment exists. If any such indication exists, the investment is tested for impairment.

Dividends and group contributions

Dividends and group contributions from Group companies are recognised in DNB Bank ASA in the same year as provisions are made in the relevant companies. Group contributions received are classified as dividends when considered to represent return on invested capital. The Board of Directors' proposed dividends and group contributions are recognised as liabilities on the balance sheet date. Provisions for dividends are presented under Other liabilities and provisions in the balance sheet.

Operating segments

The parent company does not provide segment information. This information is provided in note G2 Segments in the Group's annual report.

Note P2 Capitalisation policy and capital adequacy

Capital adequacy is measured and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD), which were implemented in Norway on 1 June 2022.

Risk Exposure Amount (REA) in relation to the capital base determines the banks' regulatory capital adequacy. The minimum requirement for total own funds is 8 per cent of REA for credit risk, market risk and operational risk. REA is also used for the calculation of the capital conservation buffer, systemic risk buffer, buffer for systemically important institutions and the countercyclical capital buffer.

Finanstilsynet (The Norwegian FSA) expects DNB Bank ASA to maintain a Pillar 2 Guidance (P2G), i.e. a margin in the form of common equity Tier 1 (CET1) capital that exceeds the total capital requirement with 1.25 per cent of total risk exposure amount (REA). At year-end 2023, the regulatory CET1 capital ratio requirement was 15.5 per cent, while the supervisory expectation was 16.7 per cent (incl. P2G). The requirement will vary due to the counter-cyclical buffer and systemic risk buffer, which are determined based on the total exposure in each country and their prevailing rates.

At year-end 2023, DNB Bank ASA had a CET1 capital ratio of 19.6 per cent and a total capital ratio of 25.2 per cent, compared with 21.1 per cent and 25.9 per cent, respectively, a year earlier. REA came to NOK 966 billion at year-end 2023, compared with NOK 904 billion the year before.

Following the global financial crisis, leverage ratio was introduced as a supplement to the risk-weighted capital requirements. Tier 1 capital is used when calculating leverage ratio. The exposure measurement consists of both on balance sheet- and off-balance sheet items. The same conversion factors are used as in the standardised approach for the risk-weighted calculation. In addition, there are specific methods for calculating exposure values for derivatives and add-ons for repo transactions.

At year-end 2023, DNB Bank ASA's leverage ratio was 7.1 per cent, compared to 7.6 per cent a year earlier. DNB Bank ASA meets the total requirement of 3 per cent by a good margin.

| Tier 1 capital ratio (%) | 21.8 | 22.8 |
| Total capital ratio (%) | 25.2 | 25.9 |

Note P2 Capitalisation policy and capital adequacy (continued)

The majority of the credit portfolios are reported according to the IRB approach. Exposures to central and regional governments, institutions, equity positions and other assets are, however, reported according to the standardised approach.

Note P3 Credit risk management

See note G4.

The DNB Bank ASA's total forbearance exposures, in accordance with the definition of forbearance in CRD, are shown in the table below.

Forbearance

| <i>Amounts in NOK million</i> | 31 December 2023 | | | 31 December 2022 | | |
|--|------------------|---------|--------|------------------|---------|--------|
| | Stage 2 | Stage 3 | Total | Stage 2 | Stage 3 | Total |
| Gross carrying amount and loan commitments | 8 644 | 8 292 | 16 936 | 14 122 | 11 711 | 25 833 |
| Expected credit loss | 34 | 2 616 | 2 651 | 44 | 2 917 | 2 961 |

Note P4 Measurement of expected credit loss

See note G5.

Note P5 Credit risk exposure and collateral

The table under includes on and off-balance sheet items which entail credit risk and the assessed value of related collateral. If available, fair values are used. In general, fair values are estimated according to different techniques depending on the type of collateral. With respect to properties, models estimating the value of collateral based on market parameters for similar properties, are used. Corresponding techniques are used for other non-financial collateral. In order to reflect the effective available collateral value, the fair value of collateral included in the table is limited to the maximum credit exposure of the individual loan or exposure.

Other collateral includes the assessed fair value of movables, sureties, ships and cash as well as other credit enhancements, such as netting agreements and guarantees received.

Credit risk exposure and collateral as at 31 December 2023

| <i>Amounts in NOK million</i> | Maximum exposure to credit risk | Secured by real estate | Collateralised by securities | Other collateral | Total collateral | Net exposure to credit risk |

Financial assets of NOK 2.1 billion in stage 3 has no credit loss due to collateralisation.

Note P5 Credit risk exposure and collateral (continued)

Comments to the main items as at 31 December 2023:

- Deposits with central banks: DNB engages only in short-term transactions with central banks, mainly in OECD countries.
- Loans to customers: See further description under "Guidelines for credit activity" in note P3 Credit risk management.
- Commercial paper and bonds: The Group's investments in commercial paper and bonds, are within market risk limits approved by the Board of Directors.
- Financial derivatives: Other collateral represents netting opportunities against other outstanding balances with customers and cash collateral received.
- Guarantees: See further description under "Guidelines for credit activity" in note P3 Credit risk management.
- Unutilised credit lines and loan offers: Offers of loans, credits and credit lines totalling NOK 108 722 million were included in the maximum credit exposure. No formal collateral has been established for such exposure, and the assessed value is not included in the table. Collateral is established once the offers are accepted by the customers. The assessment of the value of any collateral established in connection with such offers follows the procedure and criteria described under "Guidelines for credit activity" in note G4 Credit risk management.

1) NOK 69 billion has been reclassified from other collateral to collateralised by securities.

Financial assets of NOK 1.4 billion in stage 3 has no credit loss due to collateralisation.

Note P6 Credit risk exposure by risk grade

In the tables below, all loans to customers and financial commitments to customers are presented by risk grade. The division between risk classes is based on an IRB probability of default (PD) as shown in the table DNB's risk classification in note G4. See also the section Probability of default (PD) in note G5 for a description of the correlation between IRB PD and IFRS PD. The amounts are based on the gross carrying amount and the maximum exposure before adjustments for impairments.

Loans as at 31 December 2023

| <i>Amounts in NOK million</i> | Stage 1 | Stage 2 | Stage 3 | Loans at fair value | Total |
|--|---------|---------|---------|---------------------|-----------|

The contractual amount outstanding on financial assets that were written off during the reporting period and is still subject to enforcement activity, was NOK 69 million as at 31 December 2023 for DNB Bank ASA (NOK 41 million as at 31 December 2022).

Note P8 Development in gross carrying amount and maximum exposure

The following tables reconcile the opening and closing balances for gross carrying amount and the maximum exposure for loans to customers at amortised cost and financial commitments. Maximum exposure to credit risk is the gross carrying amount of loans to customers plus off-balance exposure, which mainly includes guarantees, unutilised credit lines and loan offers. Reconciling items include the following:

- Transfers between stages due to significant changes in credit risk.
- Changes due to the derecognition of loans and financial commitments during the period.
- Changes due to the origination of new financial instruments during the period.
- Exchange rate effect from consolidation and other changes affecting the gross carrying amount and maximum exposure.

Loans to customers at amortised cost

| <i>Amounts in NOK million</i> | Stage 1 | Stage 2 | Stage 3 | Total |

Note P9 Development in accumulated impairment of financial instruments

The following tables reconcile the opening and closing balances for accumulated impairment of loans to customers at amortised cost and financial commitments. Reconciling items includes the following:

- Transfers between stages due to significant changes in credit risk. The transfers are presumed to occur before the subsequent remeasurement of the allowance.
- Changes due to transfers between 12-month expected credit loss in stage 1 and lifetime expected credit loss in stages 2 and 3.
- Changes in allowance due to the origination of new financial instruments during the period.
- Increases and decreases in expected credit loss resulting from changes in input parameters and assumptions, including macro forecasts, as well as the effect of partial repayments on existing facilities and the unwinding of the time value of discounts due to the passage of time.
- Changes in allowance due to the derecognition of financial instruments during the period.
- Write-offs, exchange rate effect from consolidation and other changes affecting the expected credit loss.

Loans to customers at amortised cost

| Total foreign currencies | 1 192 | 389 |

Note P14 Financial derivatives and hedge accounting

The majority of derivative transactions in DNB relate to transactions with customers, where DNB enables them to transfer, modify, take or reduce prevailing or expected risk. Derivatives are also used to hedge currency and interest rate risk arising in connection with funding and lending. In addition, Markets conducts derivative trading for their own account and also acts as market maker. A market maker is obliged to furnish both offer and bid prices with a maximum differential between offer and bid price, together with a minimum volume. Market makers always trade for their own account.

DNB uses a range of financial derivatives for both trading and hedging purposes. "Over the counter" (OTC) derivatives are contracts entered into outside an exchange, where terms are negotiated directly with the counterparties. OTC derivatives are usually traded under a standardised International Swaps and Derivatives Association (ISDA) master agreement between DNB and its counterparties. Exchange-traded derivatives are derivative contracts with standardised terms for amounts and settlement dates, which are bought and sold on regulated exchanges.

Risk related to financial derivatives

Derivatives are traded in portfolios which also include balance sheet products. The market risk on derivatives is handled, monitored and controlled as an integral part of the market risk of these portfolios. See note G12 Market risk. Derivatives are traded with many different counterparties and most of these are also engaged in other types of business with DNB. The credit risk arising in connection with derivatives trading is included in the total credit risk measurement of the DNB Group. Netting and margining agreements are entered into with a number of counterparties, thus reducing credit risk. The authorities' capital adequacy requirements take into account netting agreements and similar bilateral agreements, resulting in a reduction of capital adequacy requirements. Most OTC derivatives with financial counterparties are cleared at a central counterparty clearing house. See note G4 Credit risk management for a description of counterparty risk.

DNB uses basis swaps and cross currency interest swaps to convert foreign currency borrowings into the desired currency. As a typical example, DNB raises a loan in euro and converts it into US dollars through a basis swap. In this example DNB pays a US dollar interest rate based on a swap curve and receives a euro interest rate reduced or increased by a margin. The basis swaps are financial derivatives measured at fair value. There may be significant variations in the value of the basis swaps from day to day, due to changes in basis swap spreads. This unhedged risk causes unrealised gains and losses. For the year 2023, there was a positive mark-to-market effect of NOK 542 million, compared with a negative mark-to-market effect of NOK 761 million in 2022.

Note P14 Financial derivatives and hedge accounting (continued)

Hedge accounting

DNB applies fair value hedge of interest rate risk on investments in fixed rate commercial papers and bonds in foreign currency, issued bonds and subordinated debt with fixed interest in foreign currency and net investment hedge of investments in foreign operations. Both derivative and non-derivative instruments are designated as hedging instruments in the hedge relationships that qualify for hedge accounting.

In fair value hedges of interest rate risk, the interest rate exposure on fixed-rate borrowings and investments is converted to floating rates. Only the interest rate component is hedged. Interest rate swaps are used to hedge the interest rate component, where the change in fair value is a result of the changes in the swap interest rate.

The critical terms of the hedging instruments and the hedging objects are set to match at the inception of the hedge and the hedge ratio is 1:1. Consequently, there was no significant hedge ineffectiveness during the year.

Fair value hedges of interest rate risk as at 31 December 2023

| <i>Amounts in NOK million</i> | Balance sheet item | Carrying amount | Accumulated fair value adjustment of the hedged item | Value changes used for calculating hedge ineffectiveness |
|-------------------------------|----------------------------|-----------------|--|--|
| Hedged exposure | | | | |
| Investments in bonds | Commercial paper and bonds | 106 245 | (2 743) | 2 824 |
| Issued bonds | Debt securities issued | 104 400 | (1 824) | (4 296) |
| Issued bonds, non-preferred | Debt securities issued | 94 929 | (3 250) | (2 984) |
| Subordinated debt | Debt securities issued | 19 778 | 116 | (504) |
| Hedging instrument | | | | |
| Interest rate swaps | Financial derivatives | | | 4 672 |

Fair value hedges of interest rate risk as at 31 December 2022

| <i>Amounts in NOK million</i> | Balance sheet item | Carrying amount | Accumulated fair value adjustment of the hedged item | Value changes used for calculating hedge ineffectiveness |
|-------------------------------|----------------------------|-----------------|--|--|
| Hedged exposure | | | | |
| Investments in bonds | Commercial paper and bonds | 82 853 | (5 786) | (5 680) |
| Issued bonds | Debt securities issued | 134 416 | (5 699) | 6 949 |
| Issued bonds | Debt securities issued | 54 827 | (5 673) | 4 011 |
| Subordinated debt | Debt securities issued | 18 027 | (322) | 285 |
| Hedging instrument | | | | |
| Interest rate swaps | Financial derivatives | | | (5 666) |

The accumulated amount of fair value hedge adjustments remaining in the balance sheet for hedged items that have ceased to be adjusted for hedging gains and losses is NOK 20 million as at end-December 2023.

Residual maturity of interest rate swaps held as hedging instruments at 31 December 2023

| <i>Amounts in NOK million</i> | Maturity | | | | |

| Hedges of issued bonds | | 8 509 | 42 899 | 137 306 | 13 009 |
| Hedges of subordinated debt | 1 867 | 6 594 | | 473 | 8 560 |

Note P15 Liquidity risk

Liquidity risk is the risk that the DNB Group will be unable to meet its obligations as they fall due or will be unable to meet its liquidity obligations without a substantial rise in associated costs.

The Group's risk appetite framework defines the limits for liquidity management in DNB. Over the last decade, DNB has drawn up internal risk appetite statements for the Liquidity Coverage Ratio (LCR), the Net Stable Funding Ratio (NSFR) and the loan-to-deposit ratio for the Group. In 2022, a new risk appetite statement on the minimum requirement for own funds and eligible liabilities (MREL) was introduced as well. Risk appetite is operationalised through DNB's liquidity strategy, which is reviewed at least annually by the Board of Directors. The liquidity strategy includes internal limits which restrict the short-term maturity of liabilities within different time frames. The various maturities are subject to stress testing based on a bank-specific crisis, a systemic crisis and a combination of these, and a contingency plan has been established to handle market events. In addition, limits have been set for structural liquidity risk, which implies that lending to customers should largely be financed through customer deposits, subordinated capital and long-term funding. Ordinary senior bond debt and covered bonds are the major sources of long-term funding.

The principles for Group liquidity risk management and control are set in the Group risk policy and further elaborated on in the Group instructions for management, reporting and control of liquidity risk. This instruction sets out detailed requirements for governance, accountability and responsibilities relating to monitoring, measurement, controls and reporting of liquidity risk. Group Treasury manages the liquidity risk on a daily basis, while Group Risk Management represents the independent second-line risk management function.

The short-term liquidity requirement (LCR) for DNB Bank ASA remained stable at above 100 per cent throughout the year and stood at 142.3 per cent at end-December 2023.

Note P15 Liquidity risk (continued)

Nominal future interest payments in excess of accrued interest are not included on the balance sheet date.

| Total depreciation and impairment of fixed and intangible assets | (4 346) | (3 445) |

See note P32 Intangible assets and note P33 Fixed assets.

Note P22 Pensions

Description of the pension schemes

The DNB Group has a defined-contribution pension scheme for all employees in Norway, with the exception of around 195 employees from the former Postbanken who are covered by a closed, group pension plan in the Norwegian Public Service Pension Fund.

The contribution rates are:

- Salary equivalent to 0 to 7.1 times the National Insurance basic amount, G: 7 per cent
- Salary equivalent to 7.1 to 12 times G: 15 per cent
- The Group has no defined-contribution pension scheme for salaries exceeding 12G (apart from the closed scheme for employees from before 2008).

Employees who were enrolled in the former defined-benefit pension schemes (terminated between 2015 and 2017) are also covered by a compensation scheme that is structured as a supplementary, contribution-based direct pension scheme.

Based on the terms and conditions approved at the time of conversion, the savings plan in the compensation scheme aims to give the individual employee a total pension capital when reaching the age of 67 corresponding to what he or she would have received if the defined-benefit pension scheme had been retained. Both the pension entitlements and the return on the pension funds are funded through operations.

The DNB Group has a disability pension scheme for all employees in Norway. The disability pension represents:

- 3 per cent of pensionable income up to 12G
- 25 per cent of G, maximum 6 per cent of pensionable income, up to 12G
- 66 per cent of pensionable income in the interval between 6G and 12G

The Norwegian companies in the Group are part of the contractual early retirement pension (AFP) scheme for the private sector. In addition, the Group has an agreement on contractual early retirement pension according to public sector rules for employees who are members of the Norwegian Public Service Pension Fund.

The private early retirement pension scheme will be funded through an annual premium established as a percentage of salaries between 1 and 7.1G.

Employer's contributions and financial activities tax are included in pension expenses and commitments.

Subsidiaries and branch offices outside Norway have separate schemes for their employees, mainly in the form of defined-contribution pension schemes. Pension expenses for employees outside Norway represented NOK 221 million.

Note P22 Pensions (continued)

Economic assumptions applied in calculating pension expenses and commitments are in accordance with the guidance from the Norwegian Accounting Standards Board per 31 December 2023.

Pension expenses

| <i>Amounts in NOK million</i> | 2023 | 2022 |

Income tax on other comprehensive income

| Amounts in NOK million | | |
|---|------------|-----------|
| Items that will not be reclassified to the income statement | 112 | 69 |
| Total income tax on other comprehensive income | 112 | 69 |

- 1) The financial activities tax is an additional tax imposed on companies within the financial services sector. This tax represents an increased income tax rate of 3 percentage points for financial institutions.
- 2) In 2023, the debt interest distribution resulted in an interest deduction in Norway which reduced the tax expenses for the DNB Bank ASA by NOK 2 464 million, compared with NOK 505 million in 2022. The increased deduction in 2023 follows from higher activity and a higher interest rate level in the United States.
- 3) In Norway, a company's income from share investments is normally exempt from tax. As a rule, this applies to investments in companies domiciled in the EU/EEA. The tax exemption applies to both dividends and gains/ (losses) upon realisation. However, 3 per cent of dividends from tax-exempt investments is included in taxable income.
- 4) The tax treatment of the liquidation of the subsidiary in Singapore in 2022 has been assessed as uncertain, and after a new assessment, DNB has recognised provisions in the accounts based on its best estimate in the case.

Note P23 Taxes (continued)

Deferred tax assets/(deferred taxes)

| <i>Amounts in NOK million</i> | 2023 | 2022 |
|---|---------|---------|
| The year's changes in deferred tax assets/(deferred taxes) | | |
| Deferred tax assets/(deferred taxes) as at 1 January | (2 231) | (3 628) |
| Changes recorded against profits | 2 307 | 1 321 |
| Changes recorded against comprehensive income | 112 | 69 |
| Currency translation differences on deferred taxes | | 7 |
| Changes due to merger | (38) | |
| Deferred tax assets/(deferred taxes) as at 31 December | 151 | (2 231) |

Deferred tax assets and deferred taxes in the balance sheet relates to the following temporary differences

| <i>Amounts in NOK million</i> | Deferred tax assets | | Deferred taxes | |
|--|---------------------|--------------|----------------|--------------|
| | 31 Dec. 2023 | 31 Dec. 2022 | 31 Dec. 2023 | 31 Dec. 2022 |
| Fixed assets and intangible assets | (3 908) | (3) | 939 | 3 001 |
| Commercial paper and bonds | 262 | | | (678) |
| Debt securities issued | (1 296) | | | 3 039 |
| Financial derivatives | 4 711 | | | (1 453) |
| Net pension liabilities | 1 210 | 34 | 2 | (1 014) |
| Net other tax-deductible temporary differences | (516) | 39 | (3) | 467 |
| Tax losses and tax credits carried forward | 625 | 24 | | (1 037) |
| Total deferred tax assets | 1 089 | 94 | 937 | 2 325 |

A significant share of the financial instruments are measured at fair value in the accounts, while for tax purposes, the same instruments are recorded on an accrual basis in accordance with the realisation principle. This gives rise to large differences between profits stated in the accounts and profits computed for tax purposes for the individual accounting years, especially in years with significant fluctuations in interest rate levels and exchange rates. These differences are offset in the longer term.

Due to large exchange rate fluctuations in 2023 and 2022, there were significant changes in unrealised gains and losses on financial instruments used in managing the Group's currency and interest rate risk. Financial instruments are recorded in accordance with the realisation principle, while the current rate method is used for receivables and liabilities in foreign currency. These differences are expected to be reversed within a short period of time.

Overview over tax assets from tax losses and tax credits carried forward

| <i>Amounts in NOK million</i> | 31 December 2023 | | | 31 December 2022 | | |

| <i>Of which presented under net deferred tax</i> | | | | | | 1 037 |

1) All tax credits carried forward relates to tax payers in Norway.

Note P23 Taxes (continued)

Uncertain tax liabilities

Tax effect of debt interest distribution between DNB Bank ASA in Norway and international branch offices

According to Norwegian tax legislation, external interest expenses shall be distributed proportionally among operations in Norway and international branches based on the respective units' total assets. This could result in additions or deductions from income in Norway.

In the second half of 2021, DNB Bank ASA received a decision from the tax authorities relating to the deduction of external interest expenses. According to Norwegian tax legislation, external interest expenses are to be distributed proportionally between DNB Bank ASA's operations in Norway and certain international branch offices, based on the respective entities' total assets. This could result in additions to or deductions from the bank's income in Norway. The decision covers the fiscal years 2015–2019 whereby the limitation of interest deduction in Norwegian taxation is calculated by including internal receivables. The decision involves a tax exposure of NOK 1.7 billion for the period in question. The estimated tax effect for the years 2020–2023 as a result of the decision amounts to a total of approximately NOK 180 million.

DNB disagrees with the tax authorities' interpretation of the legislation. Legal proceedings were initiated in 2021. The District Court ruled in DNB's disfavour in June 2022, and DNB appealed the decision. On 29 November 2023, the Court of Appeal ruled fully in favour of DNB. In January 2024, the Norwegian state appealed the judgment. On 22 February 2024, the Appeals Selection Committee of the High Court allowed that the appeal can be brought before the High Court. DNB is still of the opinion that it has a strong case, and no provisions have been recognised in the accounts.

Tax effect of the reorganisation of the lending activities in Sweden and the UK in 2015

In the second quarter of 2023, DNB Bank ASA received a draft decision from the Norwegian tax authorities relating to a reorganisation of the lending activities in Sweden and in the UK in 2015. The tax authorities questioned the valuation and calculation of taxable gains/losses relating to loan portfolios that were sold from branches of DNB Bank ASA to subsidiaries in Sweden and the UK. The Group's maximum tax exposure is estimated to be approximately NOK 1.2 billion. DNB disagrees with the Norwegian tax authorities' approach. It is DNB's view that it has a strong case, and no provisions have been recognised in the accounts.

Notice of change in the tax assessment for DNB Bank ASA for 2018–2022

On 27 February 2023, DNB Bank ASA received a notice from the Norwegian tax authorities of a change in the tax assessment of dividends received from its US subsidiary in 2019 and 2020. DNB has treated dividends received from the subsidiary as covered by the tax exemption method and has treated 3 per cent of the dividends as taxable income. The subsidiary is jointly taxed with the bank's branch office in New York. Due to the joint taxation, it is the tax authorities' opinion that the US must be considered a low-tax country, and thus that the dividends should be considered taxable. In a low-tax country assessment, the tax authorities assess the operations of – and tax rules for – the subsidiary and the bank's branch office jointly, rather than considering the subsidiary in isolation. In the tax authorities' view, this gives an effective taxation that is less than two thirds of Norwegian taxation, and the tax authorities therefore consider the US to be a low-tax country. The tax authorities have also announced that payments from the subsidiary that relate to the company's share of the tax payment under the joint taxation are to be considered taxable dividends. In an updated notice of 19 December 2023, the tax authorities extended the number of years for the part that applies to the subsidiary's tax payments, so that payments for 2018, 2021 and 2022 are also covered. The notice means a total tax exposure of around NOK 1.8 billion for DNB for the period. DNB does not agree that the US should be regarded as a low-tax country, or that there are grounds for regarding the tax payments as taxable dividends, and for this reason no provisions have been recognised in the accounts.

1) Short positions, trading activities.

The levels

For information about the levels in the fair value hierarchy, see note G28.

The instruments in the different levels

Loans to customers (level 2 and 3)

Loans in level 2 in DNB Bank ASA mainly consist of retail loans with floating interest rate measured at FVOCI. Since the fixed-rate period is very short, amortised cost is considered to be a good estimate of fair value. The corresponding loans are measured at amortised cost in the Group, due to a hold to collect business model.

Loans in level 3 consist primarily of fixed-rate loans in Norwegian kroner. The value of fixed-rate loans is determined by discounting agreed cash flows over the term of the loan, using a discount factor adjusted for margin requirements. The discount factor used has as a starting point a swap rate based on a duration equal to the average remaining lock-in period for the relevant fixed-rate loans. The assumptions underlying the calculation of the margin requirement are based on a review of the market conditions on the balance sheet date and on an assessment of the deliberations made by external investors when investing in a corresponding portfolio.

For information about the other financial instruments included in the table, see note G28 to the consolidated accounts.

|--|-------------------|---------------------------|-------|-------|
| Carrying amount as at 31 December 2023 | 636 | 136 | 4 | 775 |
| Carrying amount as at 31 December 2022 | 1 637 | 140 | 5 | 1 782 |

Sensitivity analysis, level 3

An increase in the discount rate on fixed-rate loans by 10 basis points will decrease the fair value of loans to customers by NOK 22 million as at 31 December 2023 (NOK 25 million as at 31 December 2022). The effects on other Level 3 instruments are not material.

Note P27 Offsetting

The table below presents the potential effects of DNB Bank ASA's netting arrangements on financial assets and financial liabilities.

1) DNB Capital LLC, a limited liability company, has paid-in capital of USD 2.5 billion.

Hedging of investments in subsidiaries

In DNB Bank ASA, currency risk associated with foreign currency investments in subsidiaries is subject to fair value hedging. The hedging instruments used are mainly debt securities issued. Changes in the value of the investments and hedging instruments resulting from exchange rate movements are recorded in the income statement.

Note P32 Intangible assets

Goodwill

The risk-free interest rate is set at 3.5 per cent, the market risk premium is set at 5.0 per cent, and the long-term growth factor is set at 2.0 per cent for all cash-generating units. Beta values are estimated separately for each cash-generating unit. Required rate of return is before tax. The recoverable amount in the goodwill impairment test is based on a value in use calculation, where DNB discounts expected future cash flows for each cash-generating unit. The calculations are based on historical results and plan figures approved by management.

Goodwill per unit

| | 31 December 2023 | | 31 December 2022 | |
|-----------------------|-------------------------------------|-------------------------|-------------------------------------|-------------------------|
| | Required rate of return Per cent | Recorded NOK million | Required rate of return Per cent | Recorded NOK million |
| Personal customers | 12.7 | 5 008 | 12.0 | 982 |
| Other | 12.7 | 1 427 | 12.0 | 1 394 |
| Total goodwill | | 6 435 | | 2 376 |

Personal customers

This unit encompasses banking operations (loans and deposits) for personal customers in the regional network in Norway. Goodwill relates to the merger of Sbanken, the merger between DnB and Gjensidige NOR and the acquisition of Nordlandsbanken. In addition, some goodwill remains from previously acquired offices in Gjensidige NOR. Key assumptions for cash flows during the plan period are developments in margins, volumes and impairment of loans.

1) Based on cost less any residual value, other assets are subject to straight-line depreciation over their expected useful life within the following limits:

| | |
|-------------------------|------------|
| Technical installations | 10 years |
| Machinery | 3-10 years |
| Fixtures and fittings | 5-10 years |
| Computer equipment | 3-5 years |
| Means of transport | 5-7 years |

DNB Bank ASA has not provided any collateral for loans/financing of fixed assets, including property.

Note P34 Leasing

DNB Finans offers operational and financial leasing contracts, fleet management and loans to corporate customers, public sector entities and consumers in Norway, Sweden, Denmark and Finland. The business is conducted through vendor partnerships and direct sales, in close cooperation with the client advisers in DNB Bank where possible. Focus is on financing standard assets where there is an existing and functioning second hand market. The largest asset class in the portfolio is passenger cars and LCVs. Other large asset classes are buses, trucks and trailers and construction equipment and machinery.

Note P41 Equity

Share capital

The Annual General Meeting held on 25 April 2023 resolved a reduction in share capital by cancelling own shares and redeeming shares held by the Norwegian government. The cancellation of the shares was registered in the Register of Business Enterprises on 4 July 2023. The number of issued shares was reduced by 7 751 818 to 1 542 613 203.

The share capital of DNB Bank ASA at 31 December 2023 was NOK 19 282 665 038 divided into 1 542 613 203 shares, each with a nominal value of NOK 12.50. The share capital of DNB Bank ASA at 31 December 2022 was NOK 19 379 562 763 divided into 1 550 365 021 shares, each with a nominal value of NOK 12.50.

DNB Bank ASA has one class of shares, and all shares carry voting rights. Shareholders are entitled to receive the dividend proposed at any time and have one voting right per share at the company's general meeting.

The Board of Directors has proposed a dividend of NOK 16.00 per share for 2023, for distribution from 8 May 2024.

Fund for unrealised gains

The restricted share of retained earnings (fund for unrealised gains) in DNB Bank ASA totalled NOK 2 336 million at 31 December 2023 and NOK 2 345 million at 31 December 2022.

Own shares

The Annual General Meeting held on 25 April 2023 authorised the Board of Directors of DNB Bank ASA to repurchase up to 3.5 per cent of the company's share capital. In addition, DNB Markets was authorised to repurchase 0.5 per cent for hedging purposes. DNB Bank ASA has previously signed an agreement with the Norwegian government, represented by the Ministry of Trade, Industry and Fisheries, to ensure that the government maintains its 34 per cent ownership interest in DNB Bank ASA after completion of the buy-back programme(s).

A repurchase programme of 1.5 per cent, as well as 0.25 per cent for hedging purposes, was announced on 17 July 2023 and was completed on 18 October. On 19 October, a new programme of 1.0 per cent was announced, and which was completed on 21 December. On 22 December, a third programme of 0.75 per cent was announced. Under the third programme, DNB repurchased 355 935 shares up to 31 December 2023, representing 0.02 per cent of its issued shares, at an average price of NOK 213.22 per share.

Total repurchased shares in 2023 under the three buy-back programmes were 25 774 725 shares, representing 1.67 per cent of the issued shares, and at an average price of NOK 209.49. In addition, a proportion of the Norwegian government's holding, equivalent to 0.86 per cent of issued shares, will be redeemed after the Annual General Meeting in 2024, bringing total buy-backs to 2.53 per cent.

Note P41 Equity (continued)

Treasury shares

| Tax-related advice ² | (962) | (1 041) |
| Other services | | (155) |
| Total remuneration to the statutory auditor | (26 662) | (22 242) |

1) Includes fees for interim review.

2) Mainly refers to tax-related advice to employees on international assignments.

Note P43 Information on related parties

A large number of bank transactions are entered into with related parties as part of ordinary business transactions, comprising loans, deposits and foreign exchange transactions. These transactions are based on market terms. The table below shows transactions with related parties, including balance sheets at year-end and related expenses and income for the year. See note G48 for transactions with other companies.

Transactions with DNB Group companies

| Amounts in NOK million | 2023 | 2022 |
|--|---------|---------|
| Loans as at 31 December | 457 115 | 453 649 |
| Other receivables as at 31 December ¹ | 36 449 | 46 951 |
| Deposits as at 31 December | 103 271 | 109 003 |
| Other liabilities as at 31 December ¹ | 42 848 | 35 992 |
| Interest income | 23 493 | 10 201 |
| Interest expenses | (4 567) | (1 271) |
| Net other operating income ² | 9 890 | 9 550 |
| Operating expenses | (384) | (338) |

1) Other receivables and other liabilities as at 31 December 2023 and 2022 were mainly group contributions and financial derivative contracts with DNB Boligkreditt as counterparty.

2) DNB Bank ASA recognised NOK 9 476 million and NOK 9 070 million in group contributions from subsidiaries in 2023 and 2022, respectively.

The table includes transactions with subsidiaries and sister companies. Investments in bonds issued by related parties are described below and are not included in the table.

Major transactions and agreements with related parties

DNB Boligkreditt AS

DNB Boligkreditt AS (Boligkreditt) is 100 per cent owned by DNB Bank ASA. As part of ordinary business transactions, a large number of banking transactions are entered into between Boligkreditt and the bank, including loans, deposits and financial derivatives used in currency and interest rate risk management. Transactions are carried out on market terms and are regulated in the "Agreement relating to transfer of loan portfolio between DNB Bank ASA and DNB Boligkreditt AS" (the transfer agreement) and the "Contract between DNB Bank ASA and DNB Boligkreditt AS concerning purchase of management services" (the management agreement).

The transfer agreement regulates the transfer of loan portfolios qualifying as collateral for the issue of covered bonds. During 2023, portfolios of NOK 1.2 billion (NOK 10.7 billion in 2022) were transferred from the bank to DNB Boligkreditt.

Under the management agreement, DNB Boligkreditt purchases services from the bank, including services relating to administration, bank production, distribution, customer contact, IT operations and financial and liquidity management. DNB Boligkreditt pays an annual management fee for these services based on the lending volume under management and the achieved lending spreads. However, the management agreement also ensures DNB Boligkreditt a minimum margin on loans to customers. A margin below the minimum level will be at DNB Bank's risk, resulting in a negative management fee (payment from DNB Bank to DNB Boligkreditt). The management fee paid to the bank for purchased services is recognised as 'Other income' in the comprehensive income statement and amounted to a negative NOK 1 915 million in 2023 (a negative NOK 1 442 million in 2022).

At end-December 2023 the bank had invested NOK 110.3 billion (NOK 91.7 billion in 2022) in covered bonds issued by DNB Boligkreditt.

DNB Boligkreditt enters into reverse repurchasing agreements (reverse repos) with the bank as counterparty. The value of the repos amounted to NOK 7.1 billion at end-December 2023 (NOK 25.6 billion in 2022).

Boligkreditt has a long-term overdraft facility in DNB Bank ASA with a limit of NOK 325 billion.

INDEPENDENT AUDITOR'S REPORT

To the Annual Shareholders' Meeting of DNB Bank ASA

Report on the audit of the financial statements

Opinion

We have audited the financial statements of DNB Bank ASA (the Company) which comprise the financial statements of the Company and the consolidated financial statements of the Company and its subsidiaries (the Group). The financial statements of the Company comprise the balance sheet as at 31 December 2023 and the income statement, comprehensive income statement, statement of changes in equity and cash flow statement for the year then ended and notes to the financial statements, including a summary of significant accounting policies. The consolidated financial statements of the Group comprise the balance sheet as at 31 December 2023, the income statement, comprehensive income statement, statement of changes in equity and cash flow statement for the year then ended and notes to the financial statements, including material accounting policy information.

In our opinion

- the financial statements comply with applicable legal requirements,
- the financial statements give a true and fair view of the financial position of the Company as at 31 December 2023 and its financial performance and cash flows for the year then ended in accordance with the Norwegian Accounting Act and accounting standards and practices generally accepted in Norway,
- the consolidated financial statements give a true and fair view of the financial position of the Group as at 31 December 2023 and its financial performance and cash flows for the year then ended in accordance with IFRS Accounting Standards as adopted by the EU.

Our opinion is consistent with our additional report to the audit committee.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial statements* section of our report. We are independent of the Company and the Group in accordance with the requirements of the relevant laws and regulations in Norway and the International Ethics Standards Board for Accountants' *International Code of Ethics for Professional Accountants (including International Independence Standards)* (IESBA Code), and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

To the best of our knowledge and belief, no prohibited non-audit services referred to in the Audit Regulation (537/2014) Article 5.1 have been provided.

We have been the auditor of the Company for 16 years from the election by the general meeting of the shareholders in 2008 for the accounting year 2008

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements for 2023. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

Independent auditor's report - DNB Bank ASA 2023

A member firm of Ernst & Young Global Limited

We have fulfilled the responsibilities described in the *Auditor's responsibilities for the audit of the financial statements* section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the financial statements.

Impairment of loans and financial commitments

Basis for the key audit matter

Loans to customers represent NOK 1 997 363 million (58 per cent) of total assets for the Group as at 31 December 2023. Financial commitments amount to NOK 788 885 million as at 31 December 2023. The corresponding amounts in the financial statements of the Company are NOK 1 128 358 million and NOK 554 552 million, respectively. Total expected credit losses (ECL) on loans to customers and financial commitments for the Group amount to NOK 8 454 million, of which NOK 1 987 million is based on model calculations (stages 1 and 2) and NOK 6 466 million mainly is based on individual assessments (stage 3). The corresponding amounts in the financial statements of the Company are total expected credit losses (ECL) on loans to customers and financial commitments of NOK 7 367 million, of which NOK 1 721 million mainly is based on model calculations (stages 1 and 2) and NOK 5 647 million is based on individual assessments (stage 3).

The ECL calculation requires models, but IFRS 9 does not prescribe a specific approach, thus requiring management to use judgement to obtain an unbiased and probability weighted amount that is determined by evaluating a range of possible outcomes. In addition, the measurement of ECL shall reflect the time value of money and reasonable and supportable information about past events, current conditions and forecasts of economic expectations as well as criteria for significant increases in credit risk at engagement or portfolio level. To calculate the provision the Group is required to make estimates and assumptions, including the probability of default, exposure at default, loss given default and forecasts of economic development. Loans subject to individual assessments (stage 3) require judgement about various assumptions, including the expected future cash flows and the value of underlying collateral. Due to the use of judgement in applying the ECL measurement criteria, the complexity of the calculation and the effect on estimates, we consider ECL a key audit matter.

Expected credit losses are disclosed in note G4, G5, G6, G7, G8, G9, G10 and G11 in the financial statements of the Group and note P3, P4, P5, P6, P7, P8, P9 and P10 in the financial statements of the Company.

Our audit response

We assessed the Group's methodology applied for calculating ECL including the criteria for determining significant increases in credit risk. We assessed the design and tested the effectiveness of controls related to assumptions, input and calculation of ECL. We also tested IT general controls over access and change management for related IT-systems. We involved specialists on our team and assessed management's internal validation of the ECL models. We evaluated the model structure, logic and back testing results as well as management's assessments of macroeconomic data used to create forward looking estimates applied in the ECL models to derive probability of default and loss given default, including parameters and conclusions from management's expert credit judgement forum. We assessed the completeness of the identification of exposures with significant increases in credit risk. For a sample of engagements subject to individual assessment by management (stage 3), we evaluated the assumptions applied to determine the expected credit losses, including the expected future cash flows and valuation of underlying collateral. We had an increased focus on the uncertainty in the estimated future cash flows and values of collateral for companies in segments that have been significantly affected by the current macro-economic uncertainty.

Independent auditor's report - DNB Bank ASA 2023

A member firm of Ernst & Young Global Limited

Valuation of Financial Instruments

Basis for the key audit matter

Unlisted or illiquid financial instruments measured at fair value are valued based on models that use assumptions that are not observable in the marketplace. The valuation of these instruments requires the use of judgement. Such instruments comprise assets of NOK 59 251 million and liabilities of NOK 2 345 million measured at fair value in the consolidated balance sheet and classified as level 3 instruments within the fair value hierarchy. The corresponding amounts for the Company are NOK 13 839 million and NOK 2 345 million, respectively. Due to the materiality of the unlisted or illiquid instruments, and the use of judgement, we considered the valuation of these instruments a key audit matter.

Level 3 instruments measured at fair value are disclosed in note G28 in the financial statements of the Group and note P26 in the financial statements of the Company.

Our audit response

We assessed the design and tested the operating effectiveness of internal controls over the valuation process including management's determination and approval of assumptions and methodologies used in model-based calculations as well as management's review of valuations provided by internal experts. We also assessed pricing model methodologies against industry practice and valuation guidelines. We performed independent valuations for selected instruments and used external source data where available and compared results of our valuations to the Group's valuations.

IT environment supporting financial reporting

Basis for the key audit matter

The Group has a complex and automated IT environment and is dependent on IT processes for reporting of financial information. To ensure complete and accurate processing and reporting of financial data it is important that controls over appropriate access rights and system changes are designed and operate effectively. Also, controls over transaction processing need to be designed and operate effectively. The operation of the IT environment is largely outsourced to various service providers. The IT environment supporting the financial reporting process is considered a Key Audit Matter as the IT environment is critical to ensure accurate, complete, and reliable financial reporting.

Our audit response

We obtained an understanding of the Group's IT environment, including outsourced services and controls related to financial reporting. We tested IT general controls over access management, change management and IT operations. Further we tested automated controls in the IT environment supporting financial reporting. For IT systems outsourced to service providers we evaluated third party attestation reports (ISAE 3402 reports) and assessed and tested the effectiveness of the controls. We involved specialists on our team in understanding the IT environment and in assessing and testing the operative effectiveness of controls.

Other information

Other information consists of the information included in the annual report other than the financial statements and our auditor's report thereon. Management (the board of directors and Group Chief Executive Officer) is responsible for the other information. Our opinion on the financial statements does not cover the other information, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information, and, in doing so, consider whether the board of directors' report, the statement on corporate governance and the statement on corporate social responsibility contain the information required by applicable legal requirements and whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that the other information is materially

Independent auditor's report - DNB Bank ASA 2023

A member firm of Ernst & Young Global Limited

inconsistent with the financial statements, there is a material misstatement in this other information or that the information required by applicable legal requirements is not included in the board of directors' report, the statement on corporate governance or the statement on corporate social responsibility, we are required to report that fact.

We have nothing to report in this regard, and in our opinion, the board of directors' report, the statement on corporate governance and the statement on corporate social responsibility are consistent with the financial statements and contain the information required by applicable legal requirements.

Responsibilities of management for the financial statements

Management is responsible for the preparation of the financial statements of the Company that give a true and fair view in accordance with the Norwegian Accounting Act and accounting standards and practices generally accepted in Norway, and for the preparation of the consolidated financial statements of the Group that give a true and fair view in accordance with IFRS Accounting Standards as adopted by the EU. Management is responsible for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's and the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or the Group, or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's and the Group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's and the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company and the Group to cease to continue as a going concern.

Independent auditor's report - DNB Bank ASA 2023

A member firm of Ernst & Young Global Limited

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with the board of directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the audit committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the board of directors, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on other legal and regulatory requirement

Report on compliance with regulation on European Single Electronic Format (ESEF)

Opinion

As part of the audit of the financial statements of DNB Bank ASA we have performed an assurance engagement to obtain reasonable assurance about whether the financial statements included in the annual report, with the file name dnbbankasa-2023-12-31-no.zip, have been prepared, in all material respects, in compliance with the requirements of the Commission Delegated Regulation (EU) 2019/815 on the European Single Electronic Format (ESEF Regulation) and regulation pursuant to Section 5-5 of the Norwegian Securities Trading Act, which includes requirements related to the preparation of the annual report in XHTML format and iXBRL tagging of the consolidated financial statements.

In our opinion, the financial statements, included in the annual report, have been prepared, in all material respects, in compliance with the ESEF Regulation.

Management's responsibilities

Management is responsible for the preparation of the annual report in compliance with the ESEF Regulation. This responsibility comprises an adequate process and such internal control as management determines is necessary.

Auditor's responsibilities

Our responsibility, based on audit evidence obtained, is to express an opinion on whether, in all material respects, the financial statements included in the annual report have been prepared in accordance with the ESEF Regulation. We conduct our work in accordance with the International Standard for Assurance Engagements (ISAE) 3000 – "Assurance engagements other than audits or reviews of historical financial information". The standard requires us to plan and perform procedures to obtain reasonable assurance about whether the financial statements included in the annual report have been prepared in accordance with the ESEF Regulation.

Independent auditor's report - DNB Bank ASA 2023

A member firm of Ernst & Young Global Limited

As part of our work, we perform procedures to obtain an understanding of the company's processes for preparing the financial statements in accordance with the ESEF Regulation. We test whether the financial statements are presented in XHTML-format. We evaluate the completeness and accuracy of the iXBRL tagging of the consolidated financial statements and assess management's use of judgement. Our procedures include reconciliation of the iXBRL tagged data with the audited financial statements in human-readable format. We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

INDEPENDENT ACCOUNTANT'S ASSURANCE REPORT

To the board of directors in DNB Bank ASA

Scope

We have been engaged by DNB Bank ASA to perform a limited assurance engagement, as defined by International Standards on Assurance Engagements, here after referred to as the engagement, to report on DNB Bank ASA's sustainability reporting as defined and specified in the DNB Bank ASA's GRI Index (see the document Sustainability indices 2023 on https://www.dnb.no/portalfront/nedlast/no/om-oss/aarsrapport/en_2023/Sustainability_indices_2023.pdf) (the "Subject Matter") as for the year then ended.

Other than as described in the preceding paragraph, which sets out the scope of our engagement, we did not perform assurance procedures on the remaining information included in the Annual report including the Sustainability report, and accordingly, we do not express a conclusion on this information.

Criteria applied by DNB Bank ASA

In preparing the Subject Matter, DNB Bank ASA applied the relevant criteria from the Global Reporting Initiative (GRI) sustainability reporting standards as well as its own defined published criteria (the "Criteria"). The Criteria can be accessed at globalreporting.org and information on where Custom criteria is defined and are available to the public. Such Criteria were specifically designed for companies and other organizations that want to report their sustainability impacts in a consistent and credible way. As a result, the Subject Matter information may not be suitable for another purpose.

DNB Bank ASA's responsibilities

The Board of Directors and Group Chief Executive Officer (management) are responsible for selecting the Criteria, and for presenting the Subject Matter in accordance with that Criteria, in all material respects. This responsibility includes establishing and maintaining internal controls, maintaining adequate records and making estimates that are relevant to the preparation of the Subject Matter, such that it is free from material misstatement, whether due to fraud or error.

EY's responsibilities

Our responsibility is to express a conclusion on the presentation of the Subject Matter based on the evidence we have obtained.

We conducted our engagement in accordance with the International Standard for Assurance Engagements *Other Than Audits or Reviews of Historical Financial Information* ('ISAE 3000'). This standard requires that we plan and perform our engagement to obtain limited assurance about whether, in all material respects, the Subject Matter is presented in accordance with the Criteria, and to issue a report. The nature, timing, and extent of the procedures selected depend on our judgment, including an assessment of the risk of material misstatement, whether due to fraud or error.

We believe that the evidence obtained is sufficient and appropriate to provide a basis for our limited assurance conclusion.

Our Independence and Quality Control

We are independent of the Company and the Group in accordance with the requirements of the relevant laws and regulations in Norway and the International Ethics Standards Board for Accountants' *International Code of Ethics for Professional Accountants (including International Independence Standards)* (IESBA Code), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

Independent accountant's assurance report - DNB Bank ASA Accounting period 2023

A member firm of Ernst & Young Global Limited

EY also applies International Standard on Quality Management 1, *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services engagements*, which requires that we design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Description of procedures performed

Procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained if a reasonable assurance engagement had been performed. Our procedures were designed to obtain a limited level of assurance on which to base our conclusion and do not provide all the evidence that would be required to provide a reasonable level of assurance.

Although we considered the effectiveness of management's internal controls when determining the nature and extent of our procedures, our assurance engagement was not designed to provide assurance on internal controls. Our procedures did not include testing controls or performing procedures relating to checking aggregation or calculation of data within IT systems.

A limited assurance engagement consists of making enquiries, primarily of persons responsible for preparing the Subject Matter and related information and applying analytical and other appropriate procedures.

Our procedures included:

- Interviews with key personnel to understand the business and the reporting process
- Interviews with key personnel to understand the process for collecting, collating and reporting the Subject Matter during the reporting period
- Test on a sample basis the calculation Criteria against the methodologies outlined in the Criteria and source data
- Analytical review procedures of the data and inquiries to management about any significant deviation identified
- Review of the assumptions underlying the calculations
- Comparison, on a sample basis, of data with the underlying source information
- Comparison of the presentation of the Subject Matter with the presentation requirements outlined in the Criteria.

We believe that our procedures provide us with an adequate basis for our conclusion. We also performed such other procedures as we considered necessary in the circumstances.

Conclusion

Based on our procedures and the evidence obtained, we are not aware of any material modifications that should be made to the Subject Matter as for the year then ended in order for it to be in accordance with the Criteria.
