Havyard signs contract for 1+1 live fish carrier for Norsk Fisketransport

Havyard has signed a new contract with Norsk Fisketransport (NFT) for the delivery of a live fish carrier of Havyard 587 design in June 2020. The contract will be build no 147.

Norsk Fisketransport (NFT) already owns *Havtrans*, *Namsos*, and *Steigen*, and this will be these vessels' fourth and fifth sister ships.

'We are extremely satisfied with *Steigen*, which was christened in June at a big public ceremony in Steigen,' says Oddleif Wigdahl, CEO of NFT.

The new live fish carrier NFT has ordered will be Havyard's build no 147 and it will be identical to build no 127, *Steigen*.

'There's no need to change a recipe that has already proved successful! Choosing Havyard again was not a difficult decision: Good cooperation, high quality and an end product that is exactly how we want it,' says Wigdahl.

NFT has until summer 2019 to exercise the option for a further vessel of Havyard design 587.

Complete Havyard delivery

All of Havyard's five business areas will contribute to the delivery:

Fish Handling (MMC First Process) will deliver the on-board fish handling system. **Power & Control** (Norwegian Electric Systems and Norwegian Control Systems) will deliver everything from the bridge to the propeller. **Ship Design & Solutions** is responsible for the design and **Shipbuilding Technology** will equip the vessel together with **Production & Services**.

CEO of Havyard Group ASA Geir Johan Bakke recognises that cooperation across the group's business areas results in a total package and gives Havyard a unique advantage that no other supplier can offer.

'Building a live fish carriers is complicated, and we had some technical challenges when we built *Namsos* for NFT, but this in turn resulted in the highly successful *Steigen*. The fact that NFT now wants a sister ship that is a carbon copy of *Steigen*, speaks volumes about how good the resulting vessel was. Building these new live fish carriers means developing lots of new technology and making adaptations to make the vessel as functional as possible and to ensure excellent fish welfare. Our combination of expert personnel and cooperation across business areas means that we can deliver exactly that. I look forward to further developing our good cooperation with NFT in new projects,' says Geir Johan.
