

Gentian Diagnostics AS Company Announcement:

Moss, 30.01.2017: Announcement 5-17

WIPO has published new Gentian patent application

An international patent application, PCT/EP2016/067639, was published on the 26th of January 2017 by the World Intellectual Property Organization, describing Gentians proprietary technology for more efficient CD4-positive lymphocyte measurements in blood.

Gentian Diagnostics is conducting a EUROSTARS funded R&D project in the area of monitoring therapy of HIV infections. Today many patients suffering from HIV infections are receiving efficient medical treatment and can expect longer lives and less complications from the infections, provided that the treatment is guided by measurements of the blood's content of white blood cells carrying the molecules necessary for fighting the infections (so called CD4 positive lymphocytes) and the bloods content of the HIV viruses (so called "viral load» of the blood).
