

Press Release

Smartoptics received first order from a larger regional US operator

Oslo, 25 April 2024 – Smartoptics, a leading provider of optical networking systems, today announces that a larger regional US operator, has placed a first order for delivery of 400G services to an end user.

“We are thrilled to have reached this milestone with an initial small order. Our ambition is to grow our business by adding larger accounts, and this milestone paves the way for further development and larger purchase volumes in the future,” said CEO Magnus Grenfeldt.

The main application for the products is to deliver 400G services to end users in the operators Metro networks. The Smartoptics product offered a significant cost saving for the customer, which was the main reason for using the products. The solution is based on Smartoptics DCP-1203 which is a triple 400G transponder, and associated products.

About Smartoptics:

Smartoptics provides innovative optical networking solutions and devices for the new era of open networking. Our customer base includes thousands of enterprises, governments, cloud providers, Internet exchanges as well as cable and telecom operators. We have an open networking approach in everything we do which allows our customers to break unwanted vendor lock-in, remain flexible and minimize costs. Our solutions are used in metro and regional network applications that increasingly rely on data center services and specifications. Smartoptics is a Scandinavian company founded in 2006. We partner with leading technology and network solution providers such as Brocade, Cisco and Dell and have a global reach through more than 100 business partners.
