Harte Gold Announces December 2014 Drill Results, 14.47 g/t over 4.05m

Resumes Exploration Drilling

Toronto – January 14, 2015 - HARTE GOLD CORP. ("Harte Gold") (TSX: HRT / Frankfurt (FSE: H4O) is pleased to announce assay results from the recently completed nine hole in-fill drill program at the Jewelry Box Zone (the "JB Zone") at Harte Gold's 100% owned Sugar Zone property located north-east of White River, Ontario. Eight of the nine holes in the table below contain visible gold.

Hole #	Zone	From	To	Width (m)	Grade (g/t)
JB-14-01	Upper Zone	99.29	100.81	1.52	7.91
	Including	100.22	100.81	0.59	19.20
	Lower Zone	124.01	128.06	4.05	14.47
	Including	124.01	125.66	1.65	22.61
JB-14-02	Upper Zone	101.55	103.70	2.15	7.37
	Including	101.55	102.38	0.83	13.70
	Lower Zone	122.27	130.95	8.68	2.08
	Including	129.00	129.98	0.98	6.94
JB-14-03	Upper Zone	108.00	109.96	1.96	3.52
	Lower Zone	132.47	138.47	6.00	4.70
	Including	134.80	137.47	2.67	7.51
JB-14-04	Upper Zone	115.75	118.00	2.25	2.22
	Lower Zone	147.48	150.06	2.58	3.65
JB-14-05	Lower Zone	125.28	127.98	2.70	6.58
JB-14-06	Lower Zone	127.66	135.09	7.43	3.55
	including	130.95	132.65	1.70	8.47
JB-14-07	Lower Zone	142.62	146.14	3.52	6.23
	including	143.35	144.42	1.07	17.41
JB-14-08	Lower Zone	121.61	124.26	2.65	2.24
JB-14-09	Lower Zone	133.39	136.10	2.71	16.61
	Including	133.39	134.07	0.68	58.70

Drill results comprise core intersection lengths (true width unknown), assay results are un-cut

The in-fill drill program was designed to establish 25 meter spacing between drill holes and confirm the continuity of gold mineralization in the JB Zone, which is the initial target area scheduled for mining under Harte Gold's Advanced Exploration and Bulk Sampling program, scheduled to begin June 2015.

"We are very pleased with the continuity of structure on the JB Zone", commented Stephen G. Roman, President and CEO of Harte Gold. "The amount of drilling completed in this area of the Sugar Zone Deposit assures us of a successful bulk sampling program which will lead to further development of the Sugar Zone Mine", stated Mr. Roman.

Exploration Drilling

Harte Gold has resumed exploration drilling on the Sugar Zone Property and completed seven holes of an eight hole program focused on the area of high grade grab samples taken from bedrock during the summer 2014 exploration program. The current drill program will test other targets including the Zoe Zone, which also returned high grade surface samples from bedrock and, the Contact Zone identified by the 2014 IP/Mag surveys (please see News Release dated November 12, 2014).

HARTE GOLD CORP

QA / QC Statement

Drill core was logged in Harte Gold's secure core facility in White River, Ontario. Samples were hand delivered to the AGAT preparation lab in Thunder Bay where they were crushed and pulverized and sent to the Mississauga lab for analysis. Samples were fire assayed using a 30 gram representative sample and finished with ICP analysis. Additional ICP analysis was done for pathfinder elements. For quality control and quality assurance a standard sample was inserted every 20 samples during the program and a blank sample was also inserted every 20 samples, however, within the mineralization a blank was also inserted after every sample. Samples exceeding 1 gram / tonne Au were re-assayed, in cases where visible gold is abundant, metallic screen analysis is used. R.S. Middleton P.Eng. supervised the recent drill program and oversaw all logging, splitting and assay procedures for the project. Mr. Middleton is acting as the Qualified Person for Harte Gold Corp. in regards to this project and has approved the scientific and/or technical disclosure in the news release.

About Harte Gold Corp.

Harte Gold Corp. is focused on the exploration and development of its 100% owned Sugar Zone property and is currently permitting an advanced exploration program for the Sugar Zone Deposit. The Sugar Zone property is located 60 kilometers east of the Hemlo Gold Camp and as of February 2011, contains an Indicated Resource of 980,900 tonnes, grading 10.13 g/t for 319,280 ounces of contained gold (uncapped) and an Inferred Resource of 580,500 tonnes, grading 8.36 g/t Au for 155,960 ounces of contained gold (uncapped). The mineral resource was prepared in compliance with NI 43-101.

Harte also holds the Stoughton-Abitibi property located on the Destor-Porcupine Fault Zone which is directly adjacent to and on strike of St Andrew Goldfield's Holloway Gold Mine and its high grade "Deep Smoke Discovery" in the Timmins, Ontario Porcupine gold camp.

Common Shares Outstanding: 247,240,532
