Dear Sirs/Mesdames:

RE: Material Change Report

1. The name of the reporting issuer is **Tribute Minerals Inc.** ("Tribute" or the "Company"), whose principal office is at 67 Yonge Street, Suite 808, Toronto, Ontario, M5E 1J8.
2. The material change occurred on August 29, 2006.
3. A Press Release was published on the CCN Matthews Newswire on August 29, 2006.
4. Tribute announced additional results from its 2006 summer drill program on the Garnet Lake Property, Confederation Lake Belt, Northwestern Ontario. These holes were designed to test the eastern extension of the previously defined "Arrow Zone".
5. Drill-hole GL-2006-27, collared 25 metres northeast of GL 2006-26 intersected the Arrow Zone 30 metres up-plunge and cut 30 metres of highly altered volcanic rocks hosting variable amounts of iron, zinc and copper sulphides. The best intersection was 4.15 metres (3.2 metres true width) from 304.9 - 309.05 metres down-hole returning a grade of 9.1% Zn, 0.66% Cu, 0.70 g/t Au, 23.8 g/t Ag and 33.2 g/t In with one sample containing over limit >30% Zn which is subject to upward revision with further analysis. This is within a wider sulphide intersection of 7.95 metres (6.0 metres true width) down-hole grading 5.19% Zn, 0.40% Cu, 0.50 g/t Au, 13.6 g/t Ag and 20.0 g/t Indium.

Drill-hole GL-2006-28, collared 30 metres east of GL-2006-27, intersected 31 metres of highly altered volcanic rocks containing mixed iron and base metal sulphides which returned values of up to 3.25 metres (2.5 metres true width) from 290.9 - 294.15 metres down-hole of 4.28% Zn, 0.48% Cu, 0.19 g/t Au, 23.5 g/t Ag and 8.9 g/t In. These

results continue to extend the Arrow Zone up-plunge and additional analytical results are pending from completed drilling east of GL-2006-28. The diamond drill has been moved to the north side of Garnet Lake and drilling is now ongoing to test the Arrow Zone down-plunge to the west.

Core samples were split in half using a diamond saw and sealed in secure packages, shipped by bonded carrier from Red Lake to ALS Chemex in Thunder Bay for preparation, and to ALS Chemex in North Vancouver for AU-AA62 assay (gold by fire assay with AA finish) and ME-MS61 47 element analysis (4 acid dissolution and ICP-MS). High analyses (>10,000 ppm, 1%) for copper, zinc and (>100 ppm) silver were submitted for ore grade AA62 analysis (4 acid dissolution with AA finish). A duplicate unknown to the laboratory is submitted for analyses per batch of ten samples. ALS Chemex fulfilled standard QA/QC protocols. The Confederation Lake exploration program is under the direction of Trevor Boyd, P.Geo, Geological Consultant, Tribute, and a qualified person (QP) for the purposes of NI 43-101

6. The report is not being filed on a confidential basis in reliance on subsection 7.1(2) or (3) of National Instrument 51-102.
7. No information is omitted because it is to be kept confidential.
8. Mr. Ian Brodie-Brown, President and C.E.O. of the Company, may be contacted at 416-368-2929 concerning this report.
9. The foregoing accurately discloses the material change referred to herein.

DATED at Toronto, Ontario this 7th day of September, 2006.

TRIBUTE MINERALS INC.

"William R. Johnstone"
