CALDERA RESOURCES INC.
MATERIAL CHANGE REPORT UNDER SECTION 73
OF THE QUEBEC SECURITIES ACT, SECTION 75(1)
OF THE ONTARIO SECURITIES ACT AND
SECTION 67(1) OF THE
BRITISH COLUMBIA SECURITIES ACT

1. Reporting Issuer

Principal Address:

Caldera Resources Inc.
1 Charles Street
Suite 8
South Perth, Western Australia

2. Date of Material Change

June 11, 2001

3. Publication of Material Change

The press release attached as Schedule "A" was released over the BCE Emergis Extended Disclosure Network on June 11, 2001.

4. Filing of Material Change

Caldera Resources Inc. is a reporting issuer in Quebec, British Columbia and Ontario, and its common shares are listed on The Toronto Stock Exchange under the trading symbol, “CDR”..

This material change report has been filed with the Quebec Securities Commission, the Ontario Securities Commission and the British Columbia Securities Commission.

5. Full Description of the Material Change

The material change is described in the press release attached as Schedule "A".

6. Reliance on Section 74 of the Quebec Securities Act, Section 75(4) of the Ontario Securities Act and Section 67(2) of the British Columbia Securities Act

Not applicable.

7. Senior Officers

The following senior officer of Caldera Resources Inc. may be contacted for additional information:

Chris Reindler
President
Caldera Resources Inc.
1 Charles Street
Suite 8
South Perth, Western Australia

Tel: 011-6189-367-7728
Fax: 011-6189-367-7705

8. Statement of Senior Officer

The foregoing accurately discloses the material changes referred to herein.

DATED at Toronto, Ontario, this 11th day of June, 2001.

Sgd. "Christopher W. Reindler"

Date: June 11, 2001
South Perth, Western Australia

TABLETOP PROJECT
KIMBERLITE/LAMPROITE DISCOVERY

Subsequent to the withdrawal of De Beers Australia Pty. Ltd. from the Tabletop and Tabletop East Projects, Caldera Resources Inc. has carried out a detailed examination of drill samples returned to the Company by De Beers and also of samples obtained by the Company during the drill program.

Caldera is pleased to announce that drill samples examined from one hole have been confirmed as an ultra-basic intrusive which appear to be kimberlitic or lamproitic in origin. The preliminary reviews of these samples indicate the presence of intrusive pipe material over 19 metres to the end of the hole at a depth of 73 metres. This target requires re-drilling in order to obtain fresh samples at a greater depth for more extensive examination.

The 19 metre section consists of highly weathered and leached rocks, showing abundant primary textures indicating that the original rock was ultrabasic consisting dominantly of serpentinised magnesium-rich olivine.

Three independent geologists as well as our own staff have examined thin sections of the drill samples. The abundance of the ex-serpentinised olivine-rich rock types, combined with the presence of chrome spinels from this zone and significantly anomalous geochemistry indicate the presence of an ultrabasic intrusion of kimberlitic or lamproitic origin. It is also of interest that surface sampling produced a distinct geochemical anomaly over this target. In addition, the fine-grained, somewhat banded associated material, also strongly suggests the presence of volcanic sandy – and non-sandy tuff.

This finding also provides encouragement for other drilled targets, which produced abundant chrome spinels from heavy mineral concentrates, including greater than 200 chrome spinels from limited sampling at one hole.

This discovery now considerably upgrades the area and confirms Caldera's earlier belief in the presence of a significant kimberlite/lamproite field in the Tabletop area. The previous recovery of microdiamonds on other magnetic anomalies in the area is also of great importance and justifies a detailed re-examination of the entire Tabletop Project.

Caldera has commenced preliminary discussions with several other diamond mining companies, which have expressed interest in joint venturing into the Tabletop Project.

Caldera is engaged in diamond exploration in Australia through seven projects. The Company has four projects located in the Pilbara region of northeastern Western Australia. The adjoining Tabletop and Tabletop East projects have been amalgamated as one project location. The Tabletop West and Bobbymia projects, which are located in the Pilbara, are joint-ventured with Dasher Energy Corporation, a Canadian public listed company (DHR-CDNX).

The company has a joint venture with SouthernEra Resources Limited (TSE-SUF) on the Yilgarn Project located in the Eastern Goldfields of Western Australia.

In addition the Company has two projects located in northern South Australia.

Christopher W. Reindler, President of Caldera, is the qualified person responsible for the technical results reported in the press release.
