

Intermap Enters Worldwide Contract with Garmin on Innovative, Next-Generation Golf Applications

Utilizes Intermap's best-in-class 3D elevation data services to map 42,000 golf courses around the world, providing subscribers with an unparalleled virtual experience using actual terrain data in real time

The next-generation consumer applications will access Intermap's proprietary 3D elevation data, analytics and software

DENVER, CO, July 26, 2021 – Intermap Technologies (TSX: IMP) (OTCQX: ITMSF) ("Intermap" or the "Company"), a global leader in geospatial content development and intelligence solutions, today announced a multiyear joint development agreement with Garmin®, a leading global provider of GPS-enabled products across diverse markets. Pursuant to the partnership, Intermap's high-resolution NEXTMap Digital Terrain Model (DTM) 3D elevation data will be integrated into Garmin Golf™, a new subscription-based golf application. Intermap will receive royalties on a per-subscriber basis.

Intermap's 3D, high-resolution NEXTMap DTM will enable Garmin to accurately deliver precise terrain information for 42,000 golf courses around the world. This highly accurate terrain data is ground true and consistent, not a simulated rendering, and provides actionable terrain awareness seamlessly to consumers. Users will see comprehensive swing metrics, ball flight statistics and detailed information about golf course terrain variability around the world, providing a complete golf experience package. In addition, high-resolution 3D maps of real golf courses, based upon highly precise, actual terrain data, will allow users to visualize and simulate golf games from any location, such as a backyard, living room or driving range.

"We are excited about our commercial partnership with Garmin, which will enable consumers to benefit from an unparalleled golf experience and take actual or simulated play to a new level using real world terrain data, rather than an interpolated rendering," said Patrick A. Blott, Intermap Chairman and CEO. "This also underscores the broad range of applications for our unmatched NEXTMap elevation data, which is available globally at a high level of precision. In addition to crucial government and infrastructure needs, we are pleased to be continuing our expansion into recreational and consumer uses for authoritative-grade geospatial content and intelligence."

Today's announcement follows a number of successful collaborations between Intermap and Garmin in which the Company's 3D NEXTMap data has been integrated into first-generation Garmin GPS and navigation products. This includes multiple NEXTMap products used in Garmin's outdoor and golf maps. The addition of Intermap's high-resolution, 3D NEXTMap DTM, designing a partnership in a royalty structure based upon users, supports Garmin's ongoing development of next-generation technology-enabled golf and outdoor consumer products that have global application and reach as well as rapid growth.

Intermap Reader Advisory

Certain information provided in this news release constitutes forward-looking statements. The words "anticipate", "expect", "project", "estimate", "forecast", "will be", "will consider", "intends" and similar expressions are intended to identify such forward-looking statements. Although Intermap believes that these statements are based on information and assumptions which are current, reasonable and complete, these statements are necessarily subject to a variety of known and unknown risks and uncertainties. Intermap's forward-looking statements are subject to risks and uncertainties pertaining

to, among other things, cash available to fund operations, availability of capital, revenue fluctuations, nature of government contracts, economic conditions, loss of key customers, retention and availability of executive talent, competing technologies, common share price volatility, loss of proprietary information, software functionality, internet and system infrastructure functionality, information technology security, breakdown of strategic alliances, and international and political considerations, as well as those risks and uncertainties discussed Intermap's Annual Information Form and other securities filings. While the Company makes these forward-looking statements in good faith, should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary significantly from those expected. Accordingly, no assurances can be given that any of the events anticipated by the forward-looking statements will transpire or occur, or if any of them do so, what benefits that the Company will derive therefrom. All subsequent forward-looking statements, whether written or oral, attributable to Intermap or persons acting on its behalf are expressly qualified in their entirety by these cautionary statements. The forward-looking statements contained in this news release are made as at the date of this news release and the Company does not undertake any obligation to update publicly or to revise any of the forward-looking statements made herein, whether as a result of new information, future events or otherwise, except as may be required by applicable securities law.

About Intermap Technologies

Founded in 1997 and headquartered in Denver, Colorado, Intermap (TSX: IMP; OTCQX: ITMSF) is a global leader in geospatial intelligence solutions. The Company's proprietary 3D NEXTMap® elevation datasets and value-added geospatial collection, processing, analytics, fusion and orthorectification software and solutions are utilized across a range of industries that rely on accurate, high-resolution elevation data. Intermap helps governments build authoritative geospatial datasets and provides solutions for base mapping, transportation, environmental monitoring, topographic mapping, disaster mitigation, smart city integration, public safety and defense. The Company's commercial applications include aviation and UAV flight planning, flood and wildfire insurance, environmental and renewable energy planning, telecommunications, engineering, critical infrastructure monitoring, hydrology, land management, oil and gas and transportation.
