This is the form of material change report required under section 85(1) of the *Securities Act* and section 151 of the *Securities Rules*.

FORM 53-901F
(Previously Form 27)

MATERIAL CHANGE REPORT UNDER
SECTION 85(1) OF THE *SECURITIES ACT* (BRITISH COLUMBIA)

This form is intended as a guideline. A letter or other document may be used if the substantive requirements of this are complied with.

Every report required to be filed under section 85(1) of the *Securities Act* (the "Act") shall be sent to the British Columbia Securities Commission (the "Commission") in an envelope addressed to the Commission and marked "Continuous Disclosure".

WHERE THIS REPORT IS FILED ON A CONFIDENTIAL BASIS PUT AT THE BEGINNING OF THE REPORT IN BLOCK CAPITALS "CONFIDENTIAL - SECTION 85", AND EVERYTHING THAT IS REQUIRED TO BE FILED SHALL BE PLACED IN AN ENVELOPE ADDRESSED TO THE SECRETARY OF THE COMMISSION MARKED "CONFIDENTIAL".

1 Reporting Issuer

White Tiger Mining Corp.
2489 Bellevue Avenue
West Vancouver, British Columbia V7V 1E1

Telephone (604) 922-2030

("White Tiger" or the "Company")

2 Date of Material Change

December 3, 2009

3 Press Release

Issued in West Vancouver, B.C. on December 3, 2009 under Section 85 (1) of the Act and disseminated through the facilities of Market News and Stockwatch.

4 Summary of Material Change

The Company reported on the exploration work program completed on its "Norton Lake" Property.

5 Full Description of Material Change

The Company reported on the exploration work program completed by the Company on its "Norton Lake" Property. The Norton Lake Property is a Nickel (Ni), Copper (Cu), Cobalt (Co) & Platinum Group Elements (PGE) deposit which is located about 50 km northeast of Fort Hope, Ontario, and about 400 km northeast of Thunder Bay, Ontario, Canada.

A recently completed 3D conceptual modeling of the massive sulphide nickel-copper mineralized zones at the Norton Lake deposit has identified what appears to be a separate sulphide lens near surface and adjacent to the main lens approximately 15 metres due south of the deposit. Assaying of historical drilled core lead to the discovery of this second lens which lies beneath the main known lens of the deposit. Historical core drill hole U-4 intersected semi-massive pyrhottite-chalcopyrite and stringers of sulphide from 85 metres to 98 metres. As well, historical core drill hole U-14 also intersected this lower lens from 121 metres to 130 metres. This lens was not included in the 2009 NI 43-101 resource calculation.

Check assaying of the historical core that was available indicated the following results:

Drill Hole U-4							
From (m)	**To (m)**	**Interval (m)**	**Ni (%)**	**Cu (%)**	**Pt (g/t)**	**Pd (g/t)**	**Co (%)**
85	98	13	0.77	0.84	0.09	1.75	0.026

Drill Hole U-14							
From (m)	**To (m)**	**Interval (m)**	**Ni (%)**	**Cu (%)**	**Pt (g/t)**	**Pd (g/t)**	**Co (%)**
121	130	9.0	0.71	0.31	0.35	0.54	0.033

The historical drill core is stored in the Company's secure facility located in Thunder Bay and was prepped at that location and was submitted for assaying to ALS Chemex Labs in Vancouver. Re-sampling of the split core was supervised by Robert S. Middleton, P.Eng., the Company's Qualified Person for this project. Assaying for metals was done with aqua regia acid digestion and "ICP" (inductively coupled plasma) analysis. PGE assaying was done by fire assay extraction and ICP finish to obtain platinum (Pt), palladium (Pd) and gold (Au) values.

The Company is now planning the next phase of drilling which will consist of additional shallower drill holes towards surface within this second near surface lens, and as well, deeper holes within the main zone, which remains open to depth. To date, consistent mining widths of 7 metres have been intersected within the known NI 43 101 measured and indicated resource of 2,258,654 tonnes at a 0.3% Ni cut-off as can be seen in the table below:

Category	**Tonnes**	**Ni Grade (%)**	**Cu Grade (%)**	**Co Grade (%)**	**Pd Grade (g/t)**
Measured	1,769,721	0.67	0.61	0.03	0.46
Indicated	488,933	0.67	0.61	0.03	0.47
Total	2,258,654	0.67	0.61	0.03	0.46

The significance of this second near surface lens was not previously appreciated, and therefore, further work in this under explored area south of the main zone is being planned to evaluate other potential near surface lenses, which could, if successful, significantly impact the overall economics of the project and the open pit life of the Norton Lake deposit.

White Tiger acquired its 51% joint venture interest in the Norton Lake Property pursuant to a Joint Venture Assignment Agreement with Cascadia International Resources Inc. The other joint venture partners are East West Resource Corporation (TSX-V: EWR) of West Vancouver, British Columbia and Trillium North Minerals Ltd. (TSX-V: TNM) of Toronto, Ontario.

This news release has been reviewed and approved by Mr. Robert Middleton, P. Eng., and Geophysicist, who is acting as the Company's Qualified Person for this project in accordance with regulations under NI 43-101.
