

Form 51-102F3
Material Change Report

- Item 1 Name and Address of Company**
Miranda Gold Corp.
Suite 306 – 1140 Homer Street
Vancouver, B.C. V6B 2X6
- Item 2 Date of Material Change**
August 16, 2005
- Item 3 News Release**
This news release was disseminated on August 16, 2005 through the facilities of CCN Mathews.
- Item 4 Summary of Material Change**
Miranda Gold Corp. announces that Golden Aria corp. has begun exploration work on Miranda's Coal Canyon property.
- Item 5 Description of Material Change**
See attached news release dated August 16, 2005.
- Item 6 Reliance on subsection 7.1(2) or (3) of National Instrument 51-102**
N/A
- Item 7 Omitted Information**
No omitted information
- Item 8 Executive Officer**
Kenneth Cunningham, President, 775-849-2347
- Item 9 Date of Report**
August 16, 2005.

Exploration Commences at Miranda's Coal Canyon Project

Miranda Gold Corp. ("Miranda") is pleased to announce that Golden Aria Corp. has begun exploration field work on Miranda's Coal Canyon property. Golden Aria has recently completed a 1.75 km by 1.75 km gradient array (GAR) and spontaneous potential gradient (SPG) geophysical survey and detailed geologic mapping. Soil mercury gas and conventional surface geochemical surveys are in progress within the limits of the geophysical survey to further define drill targets. GAR and SPG responses suggest two primary target areas where high resistivity and linear SPG anomalies coincide. This relationship suggests a possible broad zone of silicification enveloping vertically extensive, oxidizing sulfides, which could represent sulfidized dikes within possible "feeder" fault zones.

The geologic mapping recently completed shows that the geophysically inferred silicification and the dikes occur within a framework of intersecting fault-controlled jasperoids exposed at surface. Approximately 350 meters to the southwest of this developing target area, mineralization along the Grouse Creek fault has been intersected by drilling and encountered up to 85 ft. grading 0.022 oz Au/ton associated with sulfidized dikes. Golden Aria's exploration model is to find similar but more robust mineralization where fault zones and dikes cut favorable lower units interior to the Coal Canyon lower-plate window.

The Coal Canyon property lies in the center of the Cortez Trend, approximately three miles south of the Cortez Joint Venture's (Placer Dome and Kennecott) ET Blue project and adjoins the northeast side of US Gold's Tonkin Springs property.

Parties interested in reviewing all of Miranda's property holdings in the Cortez Trend and their relationships to active mines and competitor holdings are referred to the newly posted land map at our website www.mirandagold.com. This map was published by Intierra Ltd.

Miranda Gold Corp. is a gold exploration company active in Nevada and whose emphasis is on generating gold exploration projects within the Battle Mountain-Eureka and Cortez Trends. Miranda performs its own grass roots exploration and then employs a joint venture business model on its projects in order to maximize exposure to discovery while minimizing exploration

risk. Miranda has ongoing partnerships with Newcrest Resources Inc., Newmont Mining Company, Placer Dome U.S. Inc., Agnico-Eagle (USA) Limited, Barrick Gold Corporation and Golden Aria Corp.
