SENCO ANNOUNCES LOAN AGREEMENT

VANCOUVER – Nasim Tyab, Chairman of the Board for Senco Sensors Inc. (the “Company”), wishes to announce that the Company has entered into a collateralized Loan Agreement with 622083 BC Ltd (“622”).

622 has established an operating Line of Credit on behalf of the Company which carries certain restrictive covenants and which will bear an interest rate of 12% simple interest. Funds advanced will carry a 20% share bonus and the company will pay a finder’s fee, subject to Regulatory approval.

This Loan Agreement is part of the financial restructuring plan developed by a Company, which has targeted a significant reduction in the monthly burn rate through streamlining operations and downsizing personnel. A Creditor debt settlement is well underway in an attempt to meet certain restrictive covenants of the Loan Agreement and to improve the Balance Sheet. The Company has successfully shifted production overseas, and has implemented a strategy to improve ongoing sales. Currently, sales efforts are being increased in Canada, the USA and overseas in an effort to expand distribution and increase revenues.

About Senco Sensors Inc.

Senco Sensors is a high-tech manufacturer/wholesaler of carbon monoxide (CO) alarms that incorporate proprietary, patented electrochemical sensor technology.

The Model One CO alarm provides the very best in carbon monoxide sensing technology differentiating itself from others on the market by offering reliable CO detection at levels as low as 30 ppm and alarm points as low as 40 ppm with the accuracy of higher-cost industrial sensors. It features state-of-the-art electrochemical sensor technology, high and low level alarm points, digital display with easy to read action icons, an audible alarm, and Senco's unique manual test mode which allows the consumer to instantly test the detector with a known source of CO.

Carbon Monoxide is the most common and deadly poison in our homes today, and it affects the most vulnerable members of the family first. It is a colorless, odorless, tasteless and often deadly gas, which can be produced by any fuel-burning appliance in the home. It is the cause of some 10,000 cases of accidental poisoning, as well as several hundred deaths each year in North America alone.
