ALDEVER RECEIVES APPROVAL FOR LAC CHANCEUX GOLD PROJECT

December 7, 2015

Aldever Resources Inc. (**ALD** – TSX.V, **ALDVF** – OTCQB, Frankfurt: **17G1**) ("Aldever" or the "Company") is pleased to announce that on December 4, 2015, the TSX Venture Exchange accepted for filing an agreement with an arm's length vendor, by which the Company can earn 100% interest in the Lac Chanceux Gold Project, located approximately 200 kilometers north east of Val D'Or, in the Province of Quebec. The Lac Chanceux Gold Claims form part of the Company's Urban Barry Gold Project (the "UB Project") and are located 1.6km south of the Company's core holdings in the area.

The Lac Chanceux Gold Claims cover an area of 169ha, including the northern extent of Lac Chanceux. The claims have excellent discovery potential and are situated in the same geologic formation as Bonterra's Gladiator discovery, approximately 13km to the west. While the Lac Chanceux Gold claims have not been tested by diamond drilling, they are only 200 meters west of the Croix 3 deposit (which is anomalous with copper and silver) and 200 meters south of the Lac Chanceux Nord deposit (where drilling encountered anomalous intervals of gold and silver), the latter of which is controlled by Oban Mining.

With this acquisition Aldever now controls 1297ha in this prolific region, approximately 18 kilometers east of, and within the same geological district as, Oban Mining's Windfall Lake Deposit, which has a an estimated mineral resource*of 748,000 ounces of gold at 8.42 g/t gold in the indicated category, and 860,000 ounces of gold at 7.62 g/t gold in the inferred category.

** Source: Oban Mining Corporation website - SRK (Canada) November 2014 Technical Report. These estimates of gold resources are sourced from publicly available materials and are not located on the Urban Barry Property. Aldever has not undertaken any independent investigation of the production/resource estimates, nor has it independently analyzed the publicly available results.*

The UB Project is situated within the Urban-Barry Greenstone Belt lies within the eastern portion of the Abitibi Subprovince which has an east-west extent of approximately 135 kilometres with ranges from 4 to 20 kilometres in width along its strike extent,. Lithological units within this terrane include sequences of basalt flows withintercalated felsic rhyolities to more mafic volcaniclastic rocks that have been deformed and metamorphosed to the greenschist facies. The volcaniclastic sequence has been intruded by syn-volcanic to late (post mineralization) intrusions. Dominant structural fabrics trend to the northeast, with variable dips between 30° to 85° to the southeast. The principal exploration target at the UB Project is a seven kilometer strike length of regional scale faulting of the Abitibi Greenstone Belt which lies within the UB Project bounds.

Under the terms of the agreement, Aldever can earn 100% interest in the project by issuing 300,000 common shares within 5 days of TSX Venture Exchange approval, paying $50,000 in 18 months and incurring $200,000 in qualifying exploration expenditures over a five year period. A 1% GORR (Gross Overriding Royalty) has been granted to the vendor, of which 0.5% may be purchased by Aldever for $1,000,000. All shares issued are subject to a statutory hold period of four months plus a day from the respective date of issuance, in accordance with applicable securities legislation.
