ALDEVER COMPLETES DIAMOND DRILLING AT LAC VILLEBON, VAL D'OR QUEBEC

November 22, 2016

Aldever Resources Inc. (**ALD**—TSXV) (**ALDVF**—OTCQB) (**17G1**—Frankfurt) ("**Aldever**" or the "**Company**") is pleased to announce that it has completed its diamond drilling program at its Lac Villebon Project in Val d'Or, Quebec. Eleven NQ2 holes, totalling 2665m (ranging in depth from 132m to 387m), were completed at the JR Zone, successfully penetrating the shear zone and fault zone, both of which were found to be intensely graphitic. In addition, pyrrhotite-pyrite mineralization and shear fill have been confirmed at depth with local sphalerite and chalcopyrite present.

The purpose of the drilling was to test the primary splay of the Cadillac Tectonic Zone (the "CTZ") that bisects the property as well as the JR Zone. The JR Zone is a strongly silicified and locally graphitic shear zone, subparallel to the CTZ, identified as both a magnetic and electromagnetic anomaly in ground VLF-EM/ Mag data.

Earlier this year, short-hole outcrop drilling intersected mineralization within the JR Zone. Assays returned multiple anomalous element values including **0.132 g/t Au over 0.65m** and **36.7 g/t Ag over 0.56m**. Assays from 57 core samples ranged from trace to 0.132 g/t Au and averaged 0.003 g/t Au and from trace to 36.7 g/t Ag with a 1.815 g/t Ag average.

Regarding having completed the drilling, President Clive Massey commented: *"The program was in all respects very successful and visual inspection of the core confirms that the JR Zone has undergone several stages of activation and mineralization. We expect assay results before the end of the year."*

About the Lac Villebon Project

The Lac Villebon Gold project covers an area of approximately 1970 hectares on the western shore of Lac Villebon and the Project's mineral claims are contiguous with the southern border of Alexandria Minerals' Cadillac Break Property Group. The Project is 31 kilometers southeast of the historic Sigma and Lamaque Mines which are currently controlled by Integra Gold Corp. and produced ~ 9.1M oz Au*. The Lac Villebon Gold Project is also ~18km southeast of Agnico Eagle Mines Limited's Akasaba West deposit, which was acquired from Alexandria Minerals Corporation in 2014 and hosts an indicated gold resource* of approximately 200,000 oz Au. Other active companies in the immediate area include Glencore (GLNCY), 1.5km to the south, and Monarques Gold Corporation (MQR-V) and Cartier Resources Inc. (ECR-V) to the northeast. The project is easily accessible year-round by the Trans-Canada Highway and is a 40-minute drive from the city of Val-d'Or.

**These estimates of gold production and resources are sourced from publicly available materials from other companies active in the Val' d'Or Mining Camp and are not located on the Lac Villebon Property. Aldever has not undertaken any independent investigation of the production/resource estimates nor has independently analyzed the publicly available results.*
