About Klimat X

Klimat X carries on the business of developing validated and verified carbon credits from afforestation and reforestation of degraded land areas and marine ecosystems, including mangroves, for sale into international voluntary carbon markets. In contrast to streaming and royalty companies, Klimat X works upstream as a direct owner and operator of projects, addressing a key supply constraint the current market and the rapidly growing demand for carbon credits in global voluntary and regulated markets. The Corporation intends to achieve this by investing in the exploration, restoration and management of terrestrial and marine systems that can either be protected to enhance the sequestration of greenhouse gases or restored from a degraded status to fully productive ecosystems. Klimat X will draw on the experience of a senior executive team and Board that provide access into key target jurisdictions through relationships in the mining and natural resources sectors, combined with decades of experience in carbon markets. Klimat X plans to deploy capital at risk under various arrangements (including cooperation, assignment and production sharing agreements) with large land owners and governments in various suitable jurisdictions around the world.
