SECURITIES ACT

MATERIAL CHANGE REPORT UNDER SECTION 85(1) OF THE ACT

1. Reporting Issuer

Canplats Resources Corporation
#1180 - 999 West Hastings Street
Vancouver, B.C. V6C 2W2

2. Date of Material Change

September 18, 2001

3. Press Release

A news release was issued on September 18, 2001.

4. Summary of Material Change

The Company reports a flow-through private placement of 1,305,000 common shares at a price of $0.20 per share, subject to Canadian Venture Exchange approval.

5. Full Description of Material Changes

The private placement will provide $261,000 that will be used to drill test three of the company's projects in the Nipigon Plate region northeast of Thunder Bay, Ontario. The drill targets include coincident geophysical and geochemical anomalies at the Geikie property where 21 government lake sediment geochemical sample results range up to 13 parts per billion (ppb) gold, 1255 parts per million (ppm) copper, 36 ppm nickel and 33.9 ppb palladium. Activities over the next few weeks will be directed at analyzing summer field data to better define and prioritize targets for drilling.

6. Reliance on Section 85(2) of the Act

CANPLATS RAISES $261,000 IN FLOW-THROUGH PRIVATE PLACEMENT

Vancouver, B.C. -- Canplats Resources Corporation reports a flow-through private placement of 1,305,000 common shares at a price of $0.20 per share, subject to Canadian Venture Exchange approval.

The private placement will provide $261,000 that will be used to drill test three of the company's projects in the Nipigon Plate region northeast of Thunder Bay, Ontario. The drill targets include coincident geophysical and geochemical anomalies at the Geikie property where 21 government lake sediment geochemical sample results range up to 13 parts per billion (ppb) gold, 1255 parts per million (ppm) copper, 36 ppm nickel and 33.9 ppb palladium. Activities over the next few weeks will be directed at analyzing summer field data to better define and prioritize targets for drilling.

Canplats Resources has staked or acquired a number of well-located properties in the Nipigon Plate area now totalling 3,164 claim units in a district of geology favourable for significant platinum-palladium rich mineral deposits. The claim total includes the acquisition of the five Awl Lake mineral claims located in Obonga Lake area of the Thunder Bay Mining Division near the Puddy Lake nickel-chromium-platinum prospect. The Awl Lake claims were staked to cover a significant PGM lake sediment anomaly that coincides with a strong airborne magnetic anomaly. The closing of the acquisition took place today.
