Form 51-102F3
Material Change Report

1. **Name and Address of Company**

   Consolidated Gold Win Ventures Inc.
   Suite 1016 – 470 Granville Street
   Vancouver, British Columbia
   V6C 1V5
   Telephone: (604) 671-4718

2. **Date of Material Change**

   November 14, 2007

3. **News Release**

   November 14, 2007

4. **Summary of Material Change**

   Please see the attached news release.

5.1 **Full Description of Material Change**

   Please see the attached news release.

5.2 **Disclosure for Restructuring Transactions**

   Not Applicable

6. **Reliance on subsection 7.1(2) or (3) of National Instrument 51-102**

   Not applicable.

7. **Omitted Information**

   Not applicable.

8. **Executive Officer**

   Souhail 'Abby' Abi-Farrage, President and Director, who may be contacted at the address and phone number listed in Item 1 or Shareholder Relations @ 778-994-6453

9. **Date of Report**

   November 14, 2007

NEWS RELEASE

CGW AND KOKANEE PLACER DISCOVER ADDITIONAL OXIDE ORE STOCKPILED AT VICTORIA MINE SITE

(VANCOUVER BC; NOVEMBER 14, 2007) CONSOLIDATED GOLD WIN VENTURES INC. (CGW TSX-V, FRANKFURT - OUH, PINKS - CGWVF) is pleased to report that a previously stockpiled quantity of oxide ore has been located at the Victoria Mine site. The ore was stock piled by Anaconda Mining during their 1970's mining operation at the Victoria Mine, in Elko County, Nevada.

Please note: the following reports, estimates, grades and or reserve calculations contained herein are not compliant with National Instrument 43-101 and therefore should not be relied upon.

The stock piled ore has been identified in a report by Anaconda's Geologist at the time, Jerome H. Kaczmarowski, which stated that an indicated 60,000+ tons of 0.94% soluble copper and 30,000 tons of 0.34% soluble copper were stock piled.

Kokanee Placer (USA) Ltd. in a recent field trip to the mine identified the presence of the oxide mineralization both in place and where Anaconda had moved it. Subsequently, Kokanee has taken 46 samples from the previously mined stockpiled material and 161 samples from the benches of the insitu mineralization to determine approximate copper grades the results of which will be released when available.

The new samples taken to date and subsequent work that is planned will assist in determining the reliability of the non-compliant estimates contained herein.

CGW has agreed to fund the test mining operation including the permitting of the test. After recovery of its set-up and operating costs, CGW will receive 50% of the profits realized from the leach testing of the mineralized insitu open pit bench and stockpiled ores.

From the same report and a subsequent estimate from Hecla Mining which included a hand written below surface "reserve" calculation and mining schedule dated March 10th, 1983, a total tonnage of 1,209, 224 tons grading 2.38% copper were listed as proven and 148,383 tons grading 2.51 % were listed as probable. This reflects the "ore" outlined from the 6786 elevation level to the partially mined out 7071 – 7107 elevation level stope.

The historical "ore reserves" were reported as fan drilled above the 7101-7143 level but depended on drill results and development drift work on the next developed levels (down to the 6963 elevation) and were wholly dependent on drilling to the 6786 elevation level.

Additionally, drilling data indicates that mineralization continues to the 6200 foot elevation but is not classified as any type of resource.

It was the conclusion of Mr. Kaczmarowski in the report cited above, that quote, "Victoria ore projections have been very accurate. All levels have proved to contain more available tons than projected and slightly better overall grade than expected."

Kokanee has made arrangements with SGS Lakefield's Laboratories to conduct bottle roll and column leach tests using the SXEW (Solvent Extraction Electro Winning) process to test the recoverability of the copper in the mineralization. Following the successful outcome of this test, a bulk test sample is planned with a designed capacity for up to 500,000 tons.

Since the operations will be developed on the patented ground and will be a test mining situation, it is anticipated that the permitting and leach tests will be in time for a spring 2008 start-up.

This operation will continue in parallel with CGW's funding of its option to acquire 10% of the Victoria Mine as previously announced and to classify the historical resource estimate of 1.5 million tons grading 2.39% copper and 0.59 ounces per ton silver in accordance with National Instrument 43-101.

The company has not yet completed the work necessary to independently verify the classification of the mineral resource estimates contained herein and is not treating those mineral resource estimates as National Instrument 43-101 defined resources verified by a qualified person. As such, the historical estimates contained in this release should not be relied upon. The properties will require considerable further evaluation which the company's management and consultants intend to carry out in due course.

Although the historic resource estimates contained herein are not NI43-101 compliant and should not be relied upon, CGW and Kokanee Placer consider the estimates to be relevant, based on the amount and quality of historic work completed in the 1970's by Anaconda and which formed the basis of them building a 1000 ton per day mill and operating as a mine from 1975 through 1978; by Day Mining who purchased the property in 1980 and operated it from 1980 through 1981; and by Hecla Mining who acquired Day Mining and reviewed and proposed continuing mining from 1984 through 1988.

William Timmins, P.Eng, a Qualified Person under National Instrument 43-101, has approved the contents of this News Release.

About Consolidated Gold Win Ventures
CGW is a progressive and rapidly advancing junior exploration company with interests in Nevada – Dolly Varden Copper Gold claims and the Victoria Copper Mine, British Columbia – Yeti Gold claims, North West Territories – Drybones Diamond properties, Quebec – Raglan Platinum Group Metal claims.
