Further to the Company's Release of May 24, 2002, Red Emerald is pleased to report the results of the visible gold interval intersected in diamond drill hole MW210 on the Midway property, Nevada.

Gold mineralization was observed over the lower 14 foot interval of hole MW210 resulting in an uncut interval of 132.2 ounces gold per ton over five feet. The hole was prematurely stopped in the mineralized zone due to drilling difficulties. The table below summarizes the arithmetic average of the mineralized interval, with values "cut" to a conservative 10 ounce level. Gold has been observed in several subsequent holes providing additional confidence to the continuity of the gold distribution in the Discovery Zone.
