This is a form of a material change report required under Section 85(1) of the Securities Act and Section 151 of the Securities Rules.

BC Form 53-901F

Securities Act

MATERIAL CHANGE REPORT UNDER SECTION 85(1) OF THE SECURITIES ACT

NOTE: This form is intended as a guideline. A letter or other document may be used if the substantive requirements of this form are complied with.

NOTE: Every report required to be filed under Section 85(1) of the *Securities Act* (the "Act") must be sent to the British Columbia Securities Commission (the "Commission") in an envelope addressed to the Commission and marked "Continuous Disclosure".

NOTE: WHERE THIS REPORT IS FILED ON A CONFIDENTIAL BASIS PUT AT THE BEGINNING OF THE REPORT IN BLOCK CAPITALS "CONFIDENTIAL - SECTION 85", AND EVERYTHING THAT IS REQUIRED TO BE FILED SHALL BE PLACED IN AN ENVELOPE ADDRESSED TO THE SECRETARY OF THE COMMISSION MARKED "CONFIDENTIAL".

Item 1. Reporting Issuer

Kenrich-Eskay Mining Corporation

Item 2. Date of Material Change

May 22, 2003

Item 3. Press Release

The press release was disseminated through TSX, BC Securities Commission, Alberta Securities Commission, Stockwatch and Market News.

Item 4. Summary of Material Change

See attached excerpt from News Release

Item 5. Full Description of Material Change

See attached excerpt from News Release

Item 6. Reliance on Section 85(2) of the Act

Nothing in this form is required to be maintained on a confidential basis.

Item 7. Omitted Information

Not applicable.

Item 8. Senior Officers

Wally Boguski
Phone: 604-682-0557

Item 9. Statement of Senior Officer

The foregoing accurately discloses the material change referred to herein.

Dated this 22nd day of May 2003.

Kenrich-Eskay Mining Corporation

NEWS RELEASE

FOUR OF FIVE DRILL HOLE RESULTS – TIMMINS, ONTARIO

Vancouver, BC – KENRICH-ESKAY MINING CORPORATION (Kenrich-Eskay) has received (May 21, 2003) the analytical results from their 2003 winter-spring diamond drill program on their Langmuir South property and Triple Crown property south of Timmins, Ontario.

A five-hole drill program totalling 940 metres was completed on the Langmuir South property. The drill holes tested several geophysical anomalies. The following are the summary of the analytical results completed at XRAL Laboratories:

Drill Hole	**Line**	**Station**	**Azimuth**	**Dip**
L2-03-01	3+00E	8+25S	360	–45 degrees N
From (m)	**To (m)**	**Intersection (m)**	**Ni (%)**	**Zn (%)**
67.50	69.87	2.37	0.101	
73.00	74.84	1.84		0.220
107.17	107.84	0.67		0.934
117.50	119.58	2.58		0.143
117.00	118.63	1.63	0.090	

Drill Hole	**Line**	**Station**	**Azimuth**	**Dip**
L2-03-02	5+39E	6+88S	315	–50 degrees N
From (m)	**To (m)**	**Intersection (m)**	**Ni (%)**	**Zn (%)**
55.00	60.97	5.97	0.083	
86.86	88.00	1.14	0.043	0.192
100.12	112.79	12.32	0.069	0.072
102.901	104.00	1.10		0.222
111.27	112.79	1.52		0.125
130.83	132.33	1.50		0.111
136.08	137.05	0.97		0.115
140.54	148.97	8.43		0.114
146.67	148.97	2.30		0.251
Drill Hole	**Line**	**Station**	**Azimuth**	**Dip**
L2-03-03	7+00E	6+25S	360	–45 degrees N

From (m)	To (m)	Intersection (m)	Ni (%)	Zn (%)
43.50	53.09	9.59	0.095	
45.00	49.00	4.00	0.104	
56.36	56.98	0.62		0.597
62.76	66.35	3.59		0.238
70.36	71.40	1.04		0.112

Drill hole L2-03-04 was lost at 70 metres with no core recovery which lead to the location of hole L2-03-04A. Kenrich-Eskay is waiting the analytical results from drill hole L2-03-4A.

The three holes intersect the targeted komatiite-sedimentary contact. Drill holes L2-03-01 and L2-03-03 intersected up to 5.0 metres of massive pyrrhotite, then passed into peripheral disseminated sphalerite mineralization. Drill hole L2-03-02 intersected disseminated sulphide (pentlandite and pyrite) mineralization which carried the reported nickel values and then passed into peripheral disseminated sphalerite mineralization. There appears to be a zonation from massive pyrrhotite mineralization through pyrrhotite-pentlandite mineralization to disseminated pentlandite mineralization with the sphalerite (Zn) mineralization on the peripheries. The pyrrhotite-pentlandite zone was not intersected. There appears to be two areas between the drill holes, each about 200 metres along strike which would be the target for higher-grade nickel mineralization.

Kenrich-Eskay (earning 70% JV Partner) and its Joint Venture Partner Starfire Minerals Inc. (30%) on the Langmuir South property located southwest and adjacent along strike of the Langmuir No. 2 mine which produced 1.1 million tons averaging 1.43% Ni and an unmined geological resource of 540.000 tons grading 1.3%(MNDM-historical mine production for the Timmins area).

Kenrich-Eskay Mining has received (May 21, 2003) the analytical results from their 2003 winter-spring diamond drill program on their Triple Crown property in Eldorado Township, south of Timmins, Ontario. Kenrich completed one 207-metre drill hole on the property.

The following are the summary of the analytical results completed at XRAL Laboratories:

Drill Hole	Line	Station	Azimuth	Dip
TC-03-01	7+00W	5+00S	360	–45 degrees N
From (m)	**To (m)**	**Intersection (m)**	**Ni (%)**	**Zn (%)**
59.81	63.28	3.47	0.074	
72.94	75.87	2.93	0.079	
93.00	94.50	1.50	0.131	
155.00	160.96	5.96	0.081	

The drill hole intersected the targeted komatiite-sediment contact. The hole intersected disseminated sulphides giving the nickel values.

Kenrich-Eskay (earning 70% JV Partner) and its Joint Venture Partner Starfire Minerals Inc. (30%) in The Triple Crown property located southeast and along strike of the Redstone Mine which produced 294,895 tons averaging 2.4% nickel from 1989 to 1992 and 10,228 tons averaging 1.7% nickel from 1995 to 1996 (MNDM-historical mine production for the Timmins area).

On behalf of The Board of Directors of
Kenrich-Eskay Mining Corporation.
