

**Form 51-102F3
Material Change Report**

1. Name and Address of Company

Firestone Ventures Inc.
#220, 17010 - 103 Avenue
Edmonton, Alberta T5S 1K7

2. Date of Material Change

March 30, 2007

3. News Release

March 30, 2007 via CCNMatthews.

4. Summary of Material Change

Firestone Ventures Inc. ("Firestone") announced a new high-grade zinc discovery on the southwest side of Torlon Hill, western Guatemala. Step-out drill hole TH07-53 intersected 42.5 metres of 9.7% zinc and 4.7% lead, including 19.9 metres of 13.8% zinc and 5.2% lead and 3.2 metres of 10.6% zinc, 13.0% lead and 88 grams/tonne silver.

5. Full Description of Material Change

Firestone Ventures Inc. ("Firestone") announced a new high-grade zinc discovery on the southwest side of Torlon Hill, western Guatemala. Step-out drill hole TH07-53 intersected 42.5 metres of 9.7% zinc and 4.7% lead, including 19.9 metres of 13.8% zinc and 5.2% lead and 3.2 metres of 10.6% zinc, 13.0% lead and 88 grams/tonne silver. These values are comparable to previously drilled intersections from earlier "Bulge" area drilling on the east side of Torlon Hill, approximately 200 metres northeast.

Hole No.	Total Depth (metres)	From (metres)	To (metres)	Thickness (metres)	Zinc %	Lead %	Silver grams/tonne
TH07-52	97.5	Zinc values up to 0.5%, lead values up to 0.4%					
TH07-53	147.8	55.5	98.0	42.5	9.7	4.7	20
	Including	55.5	58.7	3.2	10.6	13.0	88
	Including	71.6	73.5	1.9	25.5	4.9	18
	Including	71.6	91.5	19.9	13.8	5.2	15
	Including	79.3	80.8	1.5	27.6	1.8	12

Of 81 drill hole samples returned from TH07-53, ten returned greater than 10% zinc, up to a maximum of 27.6% zinc. Lead values were also high, with three samples returning greater than 10% lead, up to 16.6% lead. Silver values were up to 93 grams/tonne within the mineralized intercept.

For comparison, listed below are the longest intercepts from the "Bulge" zone of high-grade zinc within the Santa Rosa Zinc Corridor on the east side of Torlon Hill:

TH06-02 33.0 metres of 21% zinc (including 4.0 metres of 39.5% zinc)
 TH06-13 53.0 metres of 10.2% zinc
 TH06-14 46.7 metres of 12.5% zinc

Drill hole TH07-53 was one of twelve holes drilled on the west side at Torlon Hill; results are still pending for holes TH097-54 to 63. Expansion drill holes on the west side of Torlon Hill were spaced roughly 50 metres apart, much more dispersed than the 15 metre spacing in the "Bulge" area to the

east. A total of 2,055.4 metres has been drilled to date since November, 2006 by Firestone during the current drill campaign. Firestone drilled 1,442 metres from February to March, 2006.

A drill hole location map (including recent drill hole assay results), news releases, a longitudinal section sketch, FAQ sheet and photos are available at www.firestoneventures.com. A National Instrument 43-101-compliant report on the Spring-2006 Drilling Program on the Torlon Hill Zinc Property has been posted on the Company's website and on SEDAR.

The road-accessible Torlon Hill project is located 18 road kilometres northwest of the city of Huehuetenango, near the Pan-American Highway in western Guatemala.
