CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

GENERAL

The following is management's discussion and analysis ("MD&A") of Canada Rare Earth Corp. prepared as of February 22, 2016. This MD&A should be read together with the unaudited interim condensed consolidated financial statements for the nine months ended December 31, 2015 and the audited consolidated financial statements for the year ended March 31, 2015 and related notes.

Certain information included in the following MD&A may constitute forward-looking statements within the meaning of applicable laws and regulations. These forward-looking statements are not guarantees of future performance and involve risks and uncertainties, which could cause actual results to differ materially from those anticipated. The Company expressly disclaims any obligation to update forward-looking statements, unless so required by applicable law, and readers should read this MD&A with the understanding that actual future results may be materially different from those expected.

The Company's unaudited condensed consolidated interim financial statements for the nine months ended December 31, 2015 have been prepared in accordance with International Accounting Standard 34 ("IAS 34") – Interim Financial Reporting, using accounting policies consistent with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") as issued by the IASB and interpretations of the International Financial Reporting Interpretations Committee.

This MD&A contains "forward looking statements" that are subject to risk factors set out in this MD&A.

Unless otherwise stated, all amounts discussed herein are denominated in Canadian dollars, which is the Company's functional and reporting currency. Additional information relating to the Company is available on SEDAR at www.sedar.com.

OVERVIEW

Canada Rare Earth Corp. (the "Company" or "CREC") is a Canadian development stage company developing an integrated business within the global rare earth industry with the initial mandate of acquiring and exploring mineral property interests.

Historically, the Company was engaged solely in the exploration and development of precious metal and base metal mineral properties. More recently, the Company's focus has been directed to properties with the potential to host rare earth elements. As the Company has become more involved in the rare earth sector and has gained greater knowledge of the global rare earth supply chain, the Company's attention, starting in about September 2012, has expanded to the down-stream processing of rare earth products.

INCORPORATION AND ORGANIZATION OF THE COMPANY

The Company was incorporated under the laws of British Columbia on July 8, 1987. The Company's common shares trade on the TSX Venture Exchange ("TSX-V") under the symbol "LL".

The Company's head office is located at Suite 1500 – 1040 West Georgia Street, Vancouver, British Columbia, Canada, V6B 1P2 and its registered office is located at Suite 700 - 1199 West Hastings Street, Vancouver, British Columbia, Canada, V6E 3T5.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

As of the date of this MD&A, the Company has three subsidiaries: REM Metals Inc., a wholly owned Ontario corporation; CREC South American Holdings Corp., a wholly owned British Columbia corporation; and CanBras Minerals S.A., a Brazilian corporation 80% owned by CREC South American Holdings Corp.

PROMISSORY NOTE

In December 2015, the Company converted its approximately a 12% interest in common shares of a private Delaware company ("Delaware Co.") into a promissory note of US\$1,200,000 (approx. \$1,600,000). The Delaware Co. is a U.S. based mineral exploration and exploitation company with property in the Caribbean. In the event that the promissory note is not paid out in three years, the Company may reverse the transaction and extend the original lease period by the period of time that the promissory note was outstanding

As part of its agreement to purchase the shares of Delaware Co., the Company obtained the right to lease, for an initial period of 25 years, 15 acres of deeded land of Delaware Co.'s 2,500 hectare parcel of land in Haiti, on which it would be suitable to construct a rare earth refinery. As part of issuing the note, the Company has also been given an option to enter into a second 25-year term at the end of the initial term for an additional US\$1,000,000 due at the time of exercising the option.

OUTLOOK

China is host to the vast majority of rare earth concentrate processing capability, and without a viable alternative, the Company along with most, if not all, rare earth mines and sources situated outside of China are currently forced to sell, directly or indirectly, to the Chinese dominated industry. This industry, under the Chinese national government's direction, is being consolidated into six major state-owned organizations.

The Company's goal has now evolved to developing an integrated business model by becoming a fully integrated rare earth producer. Over the past three years, the Company has taken a number of steps to effect its transformation from a narrowly focused rare earth exploration company to become a rare earth business involved from exploration, mining and concentrating to producing oxides, metals and alloys. Each facet of the business model is critical to the others and the development must be organized in a simultaneous, synchronized and planned manner.

The Company intends to arrange for the processing and separating of rare earth concentrate by one or more refineries set up outside of China and, in the interim, to establish sales channels between available rare earth supply and customers in China. If commercially advantageous, the Company will participate in the ownership of such refineries established outside of China.

The Company is seeking sources of rare earth concentrate from a number of prospective properties; primarily those involved with existing mineral sands operations where rare earths have, until recently, been considered a waste product. With the general downturn in the natural resource sectors and mining and mineral processing in particular, these operations are looking to augment their revenues and are open to discussing sale of rare earth so long as ultimate buyers may legally import the concentrate. As a result, less emphasis is being placed on prospective hard-rock sources of rare earth concentrate and on new mineral sands projects such as Mata Azul.

The Company has one or more immediate buyers of rare earth concentrate, located in China. The intention is to redirect the concentrate supply or to augment the supply as is, if and when the Company's refinery projects become operational.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

The Company believes that its integration strategy will position it to take advantage of the anticipated strong demand for rare earths, particularly those sourced and processed outside of China. Rare earth raw materials and value-added products are essential to many "green" technologies such as hybrid vehicles and wind power, and the Company believes that the global efforts to reduce reliance on fossil fuels in favour of alternative energy sources presents an extremely attractive opportunity for producers of rare earth elements. In addition to the emerging "green" technology sector there continues to be an increased demand for rare earths in the traditional markets including applications in the military and electronics sectors. Although the supply of rare earth oxides has been largely dominated by China with approximately 86% of the world's production in 2014, China only has approximately 42% of the known reserves of rare earths. Accordingly the introduction of new high quality rare earth sources such as Mata Azul will be an important factor in the future supply of rare earths.

China imposed export quotas on rare earths in 2005 and reduced exports by 50% over the ensuing six years. This effectively created two markets for rare earths: one internal to China and one for the rest of the world. Drastic quota reductions in late 2010 and early 2011, together with attempts by the Chinese government to introduce more regulation to the industry, led to angst among international manufacturers and in turn led to speculative price increases. In March 2012, the United States, Japan and the European Union took the position before the World Trade Organization ("WTO") that China was restricting supply contrary to international fair trade practice. After a number of presentations and appeals the WTO requested that China bring its practices into "conformity".

In December 2014, China announced the removal of export quotas effective May 2015. Concurrently, China established a new export license regime and continued with its consolidation of the Chinese rare earth industry by six majority state-owned organizations. The government of China increased controls over the production of rare earths via production quotas applied to mining operations, increased enforcement of environmental regulations at separation facilities, and increased efforts to reduce illegal rare earth mining activity and the smuggling of rare earths out of the country.

Over the last decade, many rest of world companies established manufacturing facilities in China to take advantage of lower domestic prices and to remain competitive with their Chinese peers. Recently softening of rare earth prices may be the result of continuing macro-economic effects stemming from the global financial crisis of 2008 coupled with end user industry de-stocking of inventories in the wake of the 2011 price spike and with the general slowing of the Chinese economy.

Despite these developments, the Company believes that industry fundamentals remain sound and that in order to satisfy rest of world demand for either an alternative primary supplier or an alternate secondary supplier, rare earth production sources and down-stream processing capability outside of China needs to be developed.

The Company had established a business relationship with CEC Rare Earth Corporation ("REC"), a private British Columbia corporation that is an affiliate of CREC and an Asian based group of companies (the "Asian Group") (together, the "Venture Partners"). The Asian Group owns one fully operational refinery (the "Operational Refinery") and owns another in Laos that is fully constructed but which is not yet operational (the "Constructed Refinery") as permitting is pending. In September 2015, the Company acquired the assets of REC and in November 2015 the Company announced a joint venture with the Asian Group to design and build rare earth separation refineries.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

The Venture Partners have more than ten years of engineering experience directly related to rare earth refinery design, construction and importantly to operations. In particular, the Asian Group has been instrumentally involved with the design and construction of more than ten rare earth refineries. REC is controlled by one of our directors and the Asian Group is controlled by a relative of that director. The Venture Partners and the Company are evaluating a number of rare earth refinery initiatives with the goal of pursuing one or more projects

The Company believes that it, by virtue of access to rare earth sources and most importantly access to down-stream processing design, build and operating experience, is well positioned to become a leading business within the global rare earth industry.

CORPORATE DEVELOPMENTS AND HIGHLIGHTS

The Company's objective is the development of an integrated rare earth business with refining capabilities in various jurisdictions including Asia, the Caribbean and South America. Recent developments and initiatives include:

- In December 2015, the Company signed a promissory note due on November 30, 2018 in the amount of US\$1,200,000 (\$1,600,000) in exchange for its equity investment in a privately held company with property in the West Indies and the related 25 year lease and option to extend the lease for additional 25 years for an additional US\$1,000,000 due at time of exercising the option. The lease and option pertain to 15 acres of land situated on a 75 acre prospective gold property. The Company may reverse the transaction and extend the original lease period by the period of time the promissory note is outstanding, if the promissory note is not paid out in three years.
- In December 2015, the Company appointed Gordon J. Fretwell as a director of the Company.
- In November 2015, Mr. Rojer Li resigned as director of the Company so that he may spend more time in Asia. He will be actively engaged in the facilitation of the multitude of business activities and opportunities that CREC is currently pursuing. Mr. Li will continue as an advisor and source of business and business relations for the Company.
- In November 2015, the Company confirmed the assignment to it of a letter of intent to establish a Joint Venture (the "JV") originally entered into between REC and a leading international designer, builder and operator of rare earth refineries (the "Engineering Company"). The objective of the JV is to design, build and operate rare earth processing facilities situated outside of China in which the Company will establish an equity interest. Pursuant to the LOI, the Company is to: (i) initiate or secure projects for the JV; (ii) provide project liaison services and project management services; and (iii) facilitate sourcing of concentrate/feedstock and securing customers and off take agreements for such projects. The Engineering Company will provide engineering services; project management and execution services; cost estimates; refinery commissioning; and ongoing operations (if requested). Each of the JV partners will elect two directors and the four may elect a fifth. The directors of the JV will decide on terms and conditions of any design and build contracts presented by the Company. The two JV partners are proceeding on this basis but have not yet prepared the agreement.
- In October 2015, the Company announced signing of a distribution agreement with Ganzhou Zhanhai Industrial and Trade Co., Ltd. ("Ganzhou") for specialty rare earth

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

products including high purity rare earth products. The Company has commenced the selling activities.

With this agreement, the Company has the exclusive right to market, distribute and sell Ganzhou's rare earth products in Europe, the Americas, Russia and India and the non-exclusive right in Asia. The agreement continues in perpetuity so long as the Company purchases specified minimum values of inventory in two year sequential increments.

- In October 2015, the Company appointed Peter Shearing as chief operating officer. Mr. Shearing has international business experience in operations, engineering and manufacturing and will be involved with the development and integration of the REC assets.
- In September 2015, the Company acquired assets from REC, an affiliated private British Columbia company. (see below).
- In July 2015, the Company granted 7,875,000 stock options to directors, officers, employees and consultants with an exercise price of \$0.05 and exercisable until July 8, 2020.
- In June 2015, the due diligence period pursuant to the Hinton Coal property option agreement lapsed. See *Exploration and Evaluation Assets* below.
- In May, 2015, the Company granted 500,000 stock options to a consultant with an exercise price of \$0.05 and exercisable until May 2020.
- Management conducted due diligence and made offers to purchase a European company whose business is complementary to our vertical integration strategy. The European company was acquired by another party, however, both the European company and we are open to discussing future collaborations.
- Management is in discussions with the ownership of the Laotian refinery with the intention of both parties to revise the terms of the Company's engagement to advise on the permitting requirements and approach. The original mandate expired during the quarter ended September 30, 2015.

ACQUISITION OF CEC RARE EARTH CORP. ASSETS

In September 2015, the Company acquired assets from REC. The acquired assets included \$190,795 of cash, \$60,000 of inventory, receivables determined to have \$nil fair value and intangible assets determined to have fair value of \$232,765 in the form of certain business arrangements that relate to exploring for, mining, concentrating, sourcing, treating, separating and selling rare earths in all forms and at all stages, and rights to earn equity positions in various initiatives.

Consideration for the acquired assets includes 1) 24,178,000 common shares, subject to an escrow provision over 18 months; 2) three royalties adding to 13%, based on non-refundable gross collected proceeds derived from the acquired assets. The Company can acquire one of the three royalties amounting to 3% by issuing 15,712,000 shares within two years following the acquisition; and, 3) continuing the exercise period for 5,000,000 options exercisable at \$0.10 per share until November 8, 2017. Additionally, the Company has also agreed to indemnify REC for up to \$40,000 of Canadian corporate income taxes resulting from this transaction, if any.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

EXPLORATION AND EVALUATION ASSETS

The Company's mineral projects include Red Wine project and the Clay-Howells property. Other projects include property in the Coldwell Complex and the Hinton Coal property and a number of other properties which have been previously written off. As described below, the Company has completed the sale of the Manitouwadge graphite property.

MATA AZUL

On November 3, 2014, the Company entered into a joint venture agreement with Mineracao Mata Azul S.A. ("Mata Azul") to advance exploration and establish mining and concentration operations for rare earth and other mineral rights owned by Mata Azul (the "Joint Venture"). This business arrangement allows for the Company to control the exploration and development of the Mata Azul property and ratifies the previously announced agreement between the Company and Mata Azul which provides the Company with the right to purchase all of the rare earth concentrate from the project. The joint venture terminated in January 2016 and the long term rights agreement continues.

The Company had previously entered into a long term rights agreement to purchase all of the rare earth concentrate to be produced from the Mata Azul property for 20 years. Pursuant to this agreement, the Company has the right but not the obligation to purchase some or all of the rare earth concentrate produced from the Mata Azul property for a base price plus a percentage of the difference between the base price and fair market value.

On November 5, 2014, the Company entered into two letters of intent (each an "LOI") to sell 10,000 metric tons ("MT") annually, of rare earth concentrate to two affiliated full spectrum rare earth separation refineries situated in Asia. The two LOIs, each having a five-year term, are hedged with the Company's 20-year right (but not obligation) to purchase rare earth concentrate from the Mata Azul property in Brazil.

RED WINE

The Red Wine project consists of a group of properties situated in a geological complex referred to as the "Red Wine Complex" located in west central Labrador. The Red Wine Complex is located approximately 160 kilometers northwest of Happy Valley-Goose Bay and 120 kilometers northeast of Churchill Falls, and between 15 kilometers and 60 kilometers from the Orma Lake Road, a hydro dam access road leading from Churchill Falls to a number of dykes and dams on the east side of the Smallwood Reservoir. The properties are near a road with access to electricity, a deep water port and railhead.

The material properties of the Company's Red Wine Complex consist of the Mann #1 property (comprised of 48 claim units) and Two Tom property (comprised of 34 claim units), which were acquired by option from third parties, and the Dory Pond property (155 claim units), which was acquired by staking by the Company. The properties, together with the property known as the Zimtu Property (50 claim units), are located in four separate claim groups located over a 30 kilometre length of the Red Wine Complex.

Historical exploration

Two Tom - During 2010 and 2011 a total of 23 holes were drilled on the Two Tom property and an independent resource report was completed in December 2011, which includes the following highlights:

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

- Inferred mineral resource of 40.635 million tonnes grading at 1.18% total rare earth oxide ("TREO"), 0.26% niobium oxide (Nb₂O₅) and 0.18% beryllium oxide (BeO) at a 0.60% TREO cut-off grade in the inferred category.
- Neodymium content is 15.9% of the TREO.
- Calculation is based on over 5,140 meters of drilling in 22 holes and four trenches (44.2 meters), and 2,647 assay samples covering approximately 1,200 meters of strike length to an average depth of 200 meters.
- Resource areas open along multiple directions and to depth.
- Additional drilling recommended for next phase of drilling.

Dory Pond - Numerous new rare earth element mineralized occurrences were located on the Dory Pond property in 2011 through prospecting and follow-up of airborne anomalies. These occurrences are notable because of the percentages of heavy rare earth elements ("REE") that were obtained from the sampling. Of particular note is a cluster of REE rich boulders that have been traced over a distance of four kilometers that had prospect sample values up to 8.48% TREO and 4.63% zirconium oxide (ZrO₂). Values from the prospect samples also contained very significant heavy rare earth content that varied from 4% to 54% TREO. Soil geochemistry results outline three separate high REE zones from 250 meters to 1,600 meters wide. The largest of these soil anomalies is the Dory "Mega" Soil Target. This target consists of a three kilometer by two kilometer REE – in-soil anomaly located in the southern half of the Dory Pond property. The source rocks for this anomaly are not known and have yet to be drill tested.

In 2012, the Company decided to focus on the Two Tom property, the Mann #1 property and the Dory Pond property within the Red Wine Complex and allowed other properties with less potential to be dropped. Exploration at Dory Pond has defined an east-northeast trending zone of heavy REE mineralization (the HREO Corridor). The corridor is defined by a series of highly radioactive outcrops and high grade HREO grab samples. The trend is centered on the ore grade drill intersection referred to as the B3N-03 Zone. A number of new targets for additional drill testing has been outlined which includes diamond drilling step out holes on the B3N-03 Zone and target testing of certain soil anomalies.

During fiscal 2013, further metallurgical work was carried out by XPS to investigate the probability of producing a mineral concentrate by means of magnetic separation. These tests were inconclusive and further work is required.

During fiscal 2014, the Company did not renew 450 claims at the Red Wine Complex where management had decided not to pursue additional exploration work.

At present, the company controls 12 claim blocks totaling 231 claim units in the Red Wine Complex. The Company is maintaining the property and seeking business opportunities for the Red Wine project.

CLAY-HOWELLS

During fiscal 2015, the Company allowed 16 unpatented claims (mining) to be cancelled. The property now consists of 45 patented claims (mining and surface) and 12 unpatented mining claims located 45 kilometers north-northeast of Kapuskasing, Ontario. The Clay-Howells property is accessible by existing forest roads leading north from the mill town of Kapuskasing, where infrastructure including highway, railroad, pipelines and airports are readily available. Because of its REE potential and its similarity to the Bayan Obo Iron-REE Mine in China, the Company purchased a 100% interest in the patented claims subject to a 2% net smelter return

CANADA RARE EARTH CORP.

Management's Discussion and Analysis

Nine Months Ended December 31, 2015

royalty ("NSR"). The Company has the right and option to purchase, at any time, one-half of the NSR in consideration of the payment of \$1,000,000 to the optionor.

Historical exploration

Work carried out at the Clay-Howells property in 2011 included prospecting, mineralogy studies and diamond drilling. In September 2011, the Company announced its initial National Instrument 43-101 ("NI 43-101") compliant resource estimate in respect of the Clay-Howells property. The resource estimate was completed by Tetra Tech Wardrop ("Tetra Tech") of Toronto, Ontario and a summary of the results is as follows:

- 8.5 million tonnes grading at 0.73% TREO, 0.13% niobium oxide (Nb₂O₅) and 44.17% iron oxide (Fe₂O₃) at a 0.6% TREO cut-off grade in the inferred category
- 40.4 million tonnes grading at 0.48% TREO and 34.62% Fe₂O₃ within a larger 0.2% TREO gradeshell
- HREO/TREO ratio is 10%
- Calculation is based on over 5,436 meters of drilling in 18 holes and 1,825 assay samples covering 700 meters of strike length to an average depth of 280 meters
- Resource areas open along multiple directions and to depth

The Company allowed 17 unpatented claims to lapse during fiscal 2014. In the nine months ended December 31, 2015, the Company allowed an additional 23 unpatented claims to lapse and wrote off \$58,754.

Currently, the Company is seeking business opportunities for the Clay-Howells property.

SPRINGER

During fiscal 2014, the Company determined no further exploration work would be conducted on the project. The Company intends to sell the surface rights for the Springer project. The property is currently comprised of 32 unpatented mining claims located in Springer Township and the adjacent townships of Field to the north and Pedley to the east.

COLDWELL COMPLEX

The Coldwell Complex property was acquired by staking and is 100% owned by the Company. The property currently consists of one 16 unit unpatented mining claims and is located in the Coldwell Alkaline Complex in Northern Ontario. The Coldwell property is located between Pic River and Dead Horse Creek, on the north shore of Lake Superior, 275 kilometers east of Thunder Bay.

The Coldwell property mainly covers the central and western sections of the Coldwell Complex. There are 12 historic occurrences of niobium, zirconium, yttrium, and REEs documented on the property to date. Values up to 1.2% Ce₂O₃, 1.35% Nb₂O₅ and 2.44% ZrO₂ were reported from grab samples.

Historical exploration

Field work including airborne surveying and prospecting was initiated on this project in May 2011. New prospect sample results include values ranging from 0.03% up to 3.97% TREO with HREO/TREO ratios ranging from 9% to 54%. Niobium values were also highly prospective with values ranging from 0.02% Nb₂O₅ to 1.29% Nb₂O₅. The sampling program was focused on

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

airborne radiometric anomalies outlined from the completed 1,522 line kilometer airborne magnetic and radiometric survey. These discoveries confirm that the Coldwell property hosts REE mineralization with a significant heavy REE component and the zones tend to be associated with radiometric anomalies which in some cases are several kilometers in size.

During fiscal 2014, the Company allowed certain claims to lapse that were not subject to further exploration work and reduced the property to 52 unpatented mining claims.

During the summer of 2014, the Company carried out a small prospecting program as a follow up from previous sampling and as a result detailed sampling was done over one of the main Niobium showings. The sampling was successful in outlining an area of Niobium mineralization of approximately 300 meters wide by 900 meters long.

Currently, the Company is continuing to maintain the property and is weighing its options.

HINTON COAL PROPERTY

The Hinton Coal property is located approximately 306 kilometers west of Edmonton, Alberta. It covers an area measuring approximately 2,752 hectares. The closest major centre is Hinton, Alberta, located approximately 19 kilometers to the southeast. There are several operating coal mines in the area. The property is readily accessible via Alberta's Highway 40 and from a network of secondary roads. In addition it benefits from proximity to western Alberta's rail network with links to Vancouver's Westshore Terminals and to the Port of Prince Rupert, all of which facilitates the shipping of coal to international destinations.

In June 2008, the Company acquired 100% ownership in the Hinton Coal property and in July 2008 filed a NI 43-101 report for the property. This report can be viewed on the Company's website or on SEDAR. The in-place resource estimates are as follows:

In-Place Coal Resources Suitable for Surface Mining to 12:1 Strip Ratio (tonnes)			
	Measured	Indicated	Inferred
H V C Bituminous (thermal)	47,032,000	2,557,000	161,000
In-Place Coal Resources Suitable for Surface Mining to 12:1 to 20:1 Strip Ratio (tonnes)			
	Measured	Indicated	Inferred
H V C Bituminous (thermal)	33,339,000	23,838,000	8,559,000
	(tonnes)		
	Measured and Indicated		Inferred
Total Resources	106,766,000		8,720,000

The coal resources on the Hinton Coal property were estimated based on previous exploration drilling. A total of 87 coal exploration drill holes covering 7,067 meters were drilled in and around the area. The high volatile, bituminous, low sulphur coal of the Hinton Coal property is part of the Coalspur Formation. The quality of the coal indicates that it is suitable for the international export thermal coal market after beneficiation. The Company has completed a preliminary engineering study on the development of this project. The Company continues to own a 100% interest in the Hinton Coal property.

Historical exploration

No exploration work has been undertaken on this project since fiscal 2010.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

Outlook

In September 2014, the Company entered into an agreement to option the Hinton Property for \$1,020,000 and received a non-refundable deposit of \$20,000.

In December 2014 and March 2015, the Company received additional non-refundable deposits for a total of \$20,000 in consideration of extending the due diligence period until June 24, 2015.

As of June 24, 2015, the agreement to option the Hinton property expired due to non-payment. Due to conditions in the coal market, negotiations with the former optionee have ceased. In the nine months ended December 31, 2015, the Company fully impaired the Hinton Property and wrote off \$989,632.

FINANCIAL

CONSOLIDATED FINANCIAL INFORMATION

The following is a summary of certain selected financial information that is qualified by the more detailed information appearing in the audited consolidated financial statements of the Company.

SELECTED QUARTERLY INFORMATION

The following is a summary of the eight most recently completed quarters:

Quarter ended:	Revenue \$	Exploration costs \$	Expenses \$	Loss and comprehensive loss for the period \$	Loss per share \$
March 31, 2014	-	4,937	205,658	(1,656,000)	(0.02)
June 30, 2014	-	21,365	199,500	(217,873)	(0.00)
September 30, 2014	11,000	850	208,305	(195,354)	(0.00)
December 31, 2014	86,672	9,100	319,163	(222,887)	(0.00)
March 31, 2015	94,995	2,000	238,192	(30,404)	(0.00)
June 30, 2015	92,363	-	238,040	(203,462)	(0.00)
September 30, 2015	-	-	202,386	(1,228,092)	(0.01)
December 31, 2015	-	-	265,801	(253,293)	(0.00)

During this period, other than certain corporate finance fees, the Company did not generate any revenues, or have discontinued operations or extraordinary items.

RESULTS OF OPERATIONS

The Company earned corporate finance fees of \$92,363 during the nine months ended December 31, 2015 compared to \$97,672 during the nine months ended December 31, 2014. The corporate finance fees relate to the Company providing corporate finance, strategic and business development services for a mechanically complete, full spectrum rare earth separation refinery built in Laos for which, the Company received US\$25,000 per month. The term of the engagement was for 12 months and expired during the quarter ended September 2015. The

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

parties are currently negotiating the terms of a new mandate agreement based on knowledge gained during the past year and current circumstances in the global market for rare earths.

The Company also earned interest and investment income of \$1,772 during the nine months ended December 31, 2015 compared to \$15,510 earned during the nine months ended December 31, 2014. The decrease in interest income is attributable to a decrease in the amount invested in short-term investments.

The Company's unrealized foreign exchange gains increased during the current period due to the US\$ strengthening against the CAD\$.

Total business development, exploration costs and company expenses for the nine months ended December 31, 2015 were \$706,227 compared to \$726,968 for the nine months ended December 31, 2014.

Generally, administrative and regulatory expenses in the nine months ended December 31, 2015 were comparable to the prior period. Consulting fees decreased to \$222,607 compared to \$416,627 in the comparative period, while share-based payments increased to \$155,096 compared to \$11,055 in the comparative period due to the management issuing 8,375,000 options in the current period compared to nil in the comparative period. Loss and comprehensive loss for the nine months ended December 31, 2015 was \$1,684,847 or \$0.01 loss per share compared to a loss of \$636,114 or \$0.00 loss per share at December 31, 2014 because of the above noted factors.

CASH FLOWS

The Company used cash of \$367,724 in operating activities during the nine months ended December 31, 2015 compared to \$528,047 in the nine months ended December 31, 2014.

Cash flows provided by investing activities were \$444,377 for the nine months ended December 31, 2015 compared to \$381,451 for the nine months ended December 31, 2014.

Cash flows provided by financing activities were \$190,795, on acquisition of the REC assets, for the nine months ended December 31, 2015 compared to \$nil for the nine months ended December 31, 2014.

CHANGES IN THE FINANCIAL POSITION SINCE MARCH 31, 2015

Changes in the Company's financial position since March 31, 2015 relate to operations in the ordinary course, including administration and exploration expenditures.

LIQUIDITY AND CAPITAL RESOURCES

As of December 31, 2015, the Company had \$346,316 in cash (March 31, 2015 - \$52,617), held short-term investments of \$85,000 (March 31, 2015 - \$540,000) and had net working capital of \$499,663 (March 31, 2015 - \$690,236).

At this time, the Company does not own or operate any revenue producing businesses or mineral properties, and accordingly, does not have cash flow from operations. The Company raises funds for business development, exploration, development and general overhead and other expenses through the issuance of shares from treasury. This method has been the principal source of funding for the Company since inception.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis

Nine Months Ended December 31, 2015

In addition to the funds in the Company's treasury, the Company intends to continue raising funds for future rare earth refinery projects, business development, future exploration, and general overhead and other working capital through earn-in or option agreements with other mineral exploration and mining companies, sale of assets, raising funds at project levels, generating transaction fees and to the extent necessary and available through the continuation of issuance of shares from treasury.

During the nine months ended December 31, 2015, the Company issued 24,178,000 shares in connection with the acquisition of the REC assets. During the nine months ended December 31, 2015, the Company did not issue any shares in connection with evaluation and development of assets.

The Company's success in funding its project expenditures is dependent upon its ability to raise adequate debt and equity financing. Primarily at the project level, if in the event that future private placement financings cannot be closed, the Company would have to review its budgeted project expenditures and revise where necessary. Management continues to seek out capital required to undertake its rare earth refinery projects and for working capital to meet project work commitments.

Off-Balance Sheet Arrangements

The Company does not have any off-balance sheet arrangements.

Contractual Obligations

The Company has commitments as described in the December 31, 2015 consolidated financial statements; in note 8 with respect to certain agreements on its mineral property interests and in note 17 regarding its obligations towards a commercial lease.

RISK MANAGEMENT

The Company's financial instruments are comprised of cash and cash equivalents, receivables, investments and accounts payable and accrued liabilities. The Company's financial instruments are exposed to certain risks, including credit risk, liquidity risk, interest rate risk and market risk.

Credit risk

Counterparty credit risk is the risk that the financial benefits of contracts with a specific counterparty will be lost if a counterparty defaults on its obligations under the contract. This includes any cash amounts owed to the Company by those counterparties, less any amounts owed to the counterparty by the Company where a legal right of offset exists and also includes the fair values of contracts with individual counterparties which are recorded in the financial statements.

i. *Trade credit risk*

The Company is in the development stage and has not yet commenced commercial production or sales. Therefore, the Company is not exposed to significant credit risk and overall the Company's credit risk has not changed significantly from the prior period.

ii. *Cash and cash equivalents*

In order to manage credit and liquidity risk the Company's cash and short term investments are held through a large Canadian financial institution. Staking security deposits are held by the Government of Newfoundland.

Liquidity Risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure. The Company monitors and reviews current and future cash requirements and matches the maturity profile of financial assets and liabilities.

Accounts payable and accrued liabilities are due within the current operating period.

Interest Rate Risk

The Company's interest revenue earned on cash and or short-term investments is exposed to interest rate risk. The Company does not enter into derivative contracts to manage this risk. The Company's exposure to interest rate risk is very low as the Company's short term investments are either fully liquid or bear short staggered maturity dates to mitigate the risk of fluctuating interest rates.

The Company limits its exposure to interest rate risk as it invests only in short-term investments at a major Canadian financial institution.

Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices and is comprised of currency risk, interest rate risk, and other price risk. The Company currently does not have any financial instruments that would be impacted by changes in market prices.

STOCK OPTIONS

The Company may grant options to the Company's directors, officers, employees and service providers under the Company's stock option plan. In December 2012, the shareholders of the Company approved an incentive stock option plan which provides that the maximum number of common shares reserved for issuance under the plan is 28,552,428.

In July 2015, the Company granted stock options to directors, officers, employees and consultants to purchase up to 7,875,000 common shares at an exercise price of \$0.05 until July 8, 2020. The options vest in four equal instalments over 18 months.

In May 2015, the Company granted stock options to a consultant to purchase up to 500,000 common shares at an exercise price of \$0.05 until May 2020. The options vest in four equal instalments over 18 months with the first instalment vesting in August 2015.

During the fiscal year, 825,000 stock options have expired.

OUTSTANDING SHARE DATA

At the date of this MD&A, there are 166,940,141 common shares outstanding and stock options to purchase an aggregate of 25,025,000 common shares expiring at various dates between January 2016 and July 2020, exercisable at various prices between \$0.05 and \$0.17 per share. There are no share purchase warrants outstanding.

All of the options are out of the money but if those were exercised, the maximum number of shares potentially issuable is therefore 25,025,000.

The Company is authorized to issue an unlimited number of voting shares.

OTHER MD&A REQUIREMENTS

Additional Disclosure for Venture Issuers without Significant Revenues:

As of December 31, 2015, the Company has incurred and capitalized \$741,197 (March 31, 2015: \$1,829,850) as exploration and evaluation assets since inception of the Company net of write-downs and recoveries.

Dividend Policy

No dividends have been paid on any shares of the Company since the date of incorporation, and it is not contemplated that any dividends will be paid in the foreseeable future.

Legal Proceedings

To the knowledge of the Company, there are no actual or pending legal proceedings to which the Company is or is likely to be a party or of which any of its assets are likely to be subject.

Indebtedness of Directors, Officers, Promoters and Others

No director, officer, or promoter or other member of management of the Company, or any associate or affiliate of any such person, is or has been indebted to the Company.

Conflicts of Interest

There are potential conflicts of interest to which the directors and officers of the Company will be subject in connection with the operations of the Company. Some of the directors and officers have been and will continue to be engaged in the identification and evaluation, with a view to

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

potential acquisition of interests in businesses and corporations on their own behalf and on behalf of other corporations, and situations may arise where the directors and officers will be in direct competition with the Company. Conflicts, if any, will be subject to the procedures and remedies under the British Columbia *Business Corporations Act*.

RISK FACTORS

Risks associated with developing an integrated business within the rare earth industry

The global rare earth industry is facing a number of complex issues including a disjointed supply chain connecting supply of rare earth concentrates to the critical separation/refining capability which is found primarily in China, to over 200 international manufacturing companies and their supply networks. The Company is aware of the following factors associated with developing its vertical integration strategy: the successful and timely completion of its vertical integration strategy including identifying and arranging viable, long term sources of rare earths, transitioning rare earth exploration properties into mines, assisting with fund raising to support mining operations, arranging processing of rare earths with rare earth refineries particularly those situated outside of China, arranging for the commissioning of the design, build and operation of one or more rare earth separation refineries to be situated outside of China, raising sufficient funds to support the construction and operation of each refinery, reliance on other parties to meet projected timelines, entering into long term sales contracts with international manufacturers on terms acceptable to the Company, risks related to the receipt of all required approvals including those relating to the commencement of production at selected mines and one or more refineries whether identified or not, delays in obtaining permits, licenses and operating authorities, environmental matters, water and land use risks, risks associated with the industry in general, commodity prices and exchange rate changes, operational risks associated with exploration mining, development, production, processing till separation, delays or changes in plans, risks associated with the uncertainty of reserve or resource estimates, health and safety risks, uncertainty of estimates and projections of production, costs and expenses, the adequacy of the Company's financial resources and the availability of additional cash from operations or from financing on reasonable terms or at all, political risks wherever the Company may conduct business, risks associated with the relationship between the Company and/or its business partners and local governments wherever the Company conducts business, radioactivity and related issues, dependence on one or a few mineral projects, loss of key personnel, and other factors that could cause actions, events or results not to be as anticipated.

Risks associated with exploration and mining operations

The exploration and development of mineral properties involves a high degree of risk which cannot be avoided despite the experience, knowledge and careful evaluation of prospective properties by management. There can be no assurance commercial quantities of ore will be discovered on the Company's mineral properties or on mineral properties owned by others which are or may become under contract to the Company. Even if such commercial quantities are subsequently discovered by the Company's exploration efforts, there can be no assurance such properties can be brought in to commercial production.

Operations may be subject to disruption due to weather conditions, labour unrest or other causes beyond the control of the Company. Hazards such as unexpected formations, pressures, flooding, or other conditions over which the Company does not have control may be encountered and may adversely affect the Company's operations and financial results.

CANADA RARE EARTH CORP.

Management's Discussion and Analysis
Nine Months Ended December 31, 2015

Environmental Risks

Environmental legislation is continuing to evolve and such as will require strict standards and enforcement, increased fines and penalties for non-compliance, more stringent assessment of proposed projects and a greater degree of corporate responsibility. There can be no assurance that future changes to environmental legislation will not adversely affect the Company's operations.

Political Risks

The Company is subject to political, economic, and other uncertainties, including, but not limited to, the uncertainty of negotiating with foreign governments, expropriation of property without fair compensation, adverse determination or rulings by governmental authorities, changes in mining policies or in the personnel administering them, currency fluctuations, disputes between various levels of authorities, arbitrating and enforcing claims against entities that may claim sovereignty, authorities claiming jurisdiction, royalty and government take increases and other risks arising out of foreign governmental sovereignty over the areas in which the Company's operations are conducted. The Company's operations may be adversely affected by changes in government policies and legislation and other factors which are not within the control of the Company. In particular, Delawareco is a U.S. based mineral exploration and exploration company focused on locations in Haiti. As part of the Company's agreement with Delawareco, the Company has been given the right to lease, for an initial period of 25 years, 15 acres on which it may be suitable to construct a rare earth refinery.

Mineral Market

The market for minerals, in general, and for rare earth elements in particular is subject to factors beyond the Company's control, such as market price fluctuation, currency fluctuation and government regulation. The effect of such factors cannot be accurately calculated. The existence of any or all such factors may restrict the access to a market, if same exists, for the sale of commercial ore which may be discovered.

Funding Requirements

In order to proceed with its exploration and development activities, the Company will require additional funding. There can be no guarantee that such funds will be available as and when required or, if available, be accessible on reasonable commercial terms.

Reliance on Management

The Company anticipates that it will be heavily reliant upon the experience and expertise of management with respect to the further development of the mineral properties. The loss of any one of their services or their inability to devote the time required to effectively manage the affairs of the Company could materially adversely affect the Company.

Auditors, Transfer Agents and Investor Relations

The auditors of the Company are DeVisser Gray LLP, Chartered Accountants of Vancouver, British Columbia.

The transfer agent and registrar for the common shares of the Company is Computershare of Vancouver, British Columbia.
