- 8. Executive Officer:**

Graeme Rowland, Chairman and President
- 9. Date of Report:**

Dated at Vancouver, British Columbia this 27th March, 2007.

(signed "Graeme Rowland")

Graeme Rowland
Chairman & President

ADROIT RESOURCES INC.
(TSXV: ADT & FSE: A7V)

News Release: **HISTORIC ANTIMONY RESOURCES INCREASED**
Dated: March 27, 2007

Four additional permits. Management is pleased to report that it has made application to acquire four (4) additional properties totalling 1,364 hectares in Central Italy that host historic antimony deposits and are prospective for Gold.

The areas applied for, the Monticchio (236ha), I Salaioli (530ha), Tafone Sud (340ha) and Montauto (258ha) permits, are all situated within the Manciano and Scansano areas. The Company already holds two permits in Manciano area, namely Poggio Pietricci and Podere Banditella, and has currently one permit under application, namely the Faggio Scritto permit.

The Manciano region was, by world standards, a significant producer of antimony with several deposits mined over the past century. Production in the area ceased in the early 1980s with the closure of the Tafone Mine. Exploration and resource evaluation carried out, prior to the mine closure, allowed for the following resource estimates:

- **420,000t @ 1.6%** - Tafone Sud and Montauto : 100,000t @ 1.7% Sb according to local mining company SAMIM, over 420,000t @ approximately 1.6% Sb; according to Mining Italiana (1983, recalculation of resources on the basis of the same SAMIM data, using a 1.0% Sb cut-off grade).
- **155,000t @ 2.0%** - Monticchio : 155,000t @ 2.0% Sb (SAMIM)
- **35,000t @ 2.0%** - I Salaioli : 35,000t @ 2.0% Sb (SAMIM)
- **500,000t @ 1.6%** -Poggio Pietricci and Faggio Scritto: 500,000t @ 1.6% Sb (SAMIM) plus 2.3 million tonnes @ 0.61% Sb (SAMIM)
- **Total Higher Grade Antimony: 1,110,000t** at an average grade of **1.67%**

The mineralization outlined remain open in several directions. The above resource estimates and the historical data are non-conformable with National Instrument 43-101, "Standards of Disclosure for Mineral Deposits", and these historical references have not yet been independently verified by the Company.

The Company is assessing these historic Antimony deposits for eventual commercial exploitation.

The Manciano block of permits is located about 50km south from the Company's project office in Grosseto. The addition of these properties will significantly add to the Company's overall portfolio of properties in the region, and will bring the total number of properties owned or applied for to sixteen (16), with a total surface area of approximately 8,775 hectares.

Under the guidelines of National Instrument 43-101 Mr. Franceschi is the Qualified Person for the and he has reviewed and approved the geological information contained in this news release.

Options exercised. 100,000 options under the Company Stock Option Plan have been exercised by an insider.

Contd./2..

Adroit Resources is a mineral exploration company that is currently exploring for Gold and Antimony in Central Italy and diamonds, precious and base metals in the Temagami and Bancroft areas of Ontario, Canada. Adroit is also seeking new precious and base metal projects to add to its expanding portfolio. The Company's issued and outstanding share capital is 28,279,535 common shares before the pending financing announced on February 27, 2007 and the 100,000 shares to be issued pursuant the option exercise, reported above.
