BC FORM 51-102F3
SECURITIES ACT

MATERIAL CHANGE REPORT

1. Name and Address of Company: Adroit Resources Inc.

2. Date of Material Change: 4th September, 2007

3. News Release:

A news release dated 4th September, 2007 to Stockwatch and Market News.

4. Summary of Material Change:

Please see the attached news release.

5. Full Description of Material Change: See attached news release dated 4th September, 2007.

6. Reliance on subsection 7.1(2) or (3) of National Instrument 51-102: N/A

7. Omitted Information: Nil

8. Executive Officer:

Graeme Rowland, Chairman and President

9. Date of Report:

Dated at Vancouver, British Columbia this 4th September, 2007.

(signed "Graeme Rowland")

Graeme Rowland
Chairman & President

ADROIT RESOURCES INC.
(TSXV: ADT & FSE: A7V)

News Release: **DIAMOND DRILLING PROGRAM PLANNED FOR ARGENTIA RIDGE AND NIEMETZ PROPERTIES**

Dated September 4th, 2007

Vancouver, B.C.- **Adroit Resources Inc**. ("Adroit") Management is pleased to report that a 2,000 metre diamond drilling programme is planned to commence in September 2007 on its **Argentia Ridge Silver and** the **Niemetz Gold** properties in Ontario, Canada.

Argentia Ridge Silver Property

A diamond drilling programme (1,063 meters in 9 holes) on the Argentia Ridge Property completed earlier in the year, intersected anomalous Cu, Zn, and Au values in several diamond drill holes (see News Release dated May 14, 2007). The current minimum 1,000 metre programme envisions testing targets generated by the Aeroquest Ltd report (see news release dated October 11, 2006), . These targets were not drill tested during the previous programme due to access problems caused by severe weather conditions.

Property description. The Argentia Ridge Property (100% owned) consists of 14 contiguous mining claim blocks comprising 96 claim units. The property is located within South Lorrain Township (Sudbury Mining Division, Ontario), and is located about 2.5 km south of the abandoned mining town of Silver Centre.

Historically, South Lorrain Township has produced some 23,338,906 ounces of silver. Production has mainly come from the bonanza silver vein system that occurs within the first 100 metres of metavolcanic rocks that overly a gently dipping western flank of a Nipissing Gabbro intrusive. Similar geology is repeated on the Argentia Ridge property where more than 5 kilometers of prospective strike length covers the metavolcanic and Nipissing Gabbro contact. Numerous historic pits and exploration and production shafts exist on the Property.

Niemetz Gold Property

The summer 2007 field season on the Niemetz Property confirmed gold mineralization on the property. Out of 144 outcrop and trench grab samples, 10 returned values in excess of 0.5g/t Au, amongst which four yielded values ranging between 2.4 and 6.7 g/t gold. The surface program completed in July of 2007, consisted of line cutting, prospecting, geological mapping and ground truthing of geophysical anomalies.

The drilling programme will consist of a minimum of 1,000 metres of BQ size core drilling.

Property description. The Property covers the contact area between felsic intrusive rocks and felsic to mafic volcanics, and is host to the Niemetz and Snowshoe Lake mineral occurrences. The gold mineralization on the property is structurally controlled and associated with disseminated to stringer sulphides. Geophysics was carried out on the Property in 2000, when former owners conducted a magnetometer, a horizontal loop EM and a Gradient Realsection TDIP Resistivity survey over part of the property.

The Niemetz property is located between two deposits, the former Teck Copperfields Mine, located 4 kilometres to the west, and the Diadem deposit, located 10 kilometres to the east. The Copperfields Mine produced, between 1954 and 1972, 684,000 tons of ore grading 6.48% Cu and 6.68 g/t Au; the Diadem-Copper-Nickel deposit has a known historical resource (non NI-43-101 compliant) of 500,000 tons @ 0.50% Cu, 0.1% Ni tested to a depth of 500 feet (J.R. Poloni, 2001) .

Guy Franceschi, Economic Geologist (Director, Adroit Resources Inc.) has verified and approved the geological information contained within this news release. Mr. Franceschi satisfies the requirements of a Qualified Person as defined in the National Instrument 43-101 (Standards of Disclosure for Mineral Projects).

A qualified person has not done sufficient work to classify the historical estimate as current mineral resources, the issuer is not treating the historical estimate as current mineral resources and the historical estimate should not be relied upon.

Assays Explained
Following investor requests, the Company provides the following relevant notes to assist investors to appreciate the nature and impact of the above assay results in accordance with Good Disclosure Practices Under National Instrument 43-101.

Samples are assayed to indicate the amount of metal contained in the sample and expressed as a percentage or grams per short tons. This does not imply that the sample weighed a short ton, only that if it were a ton, it would contain the percentage or grams indicated by the assay.

A ton contains 2,000 pounds. If the assay result states 1% Copper then the amount of metal indicated would be 20 pounds.

Nota Bene: The indicated metal is before recovery rates which will be lower. Nor does any calculation of value make any allowance for extraction costs.

Market rates. As at 2000 hrs Central European Time, today September 4th, 2007, rounded to two decimal places Kitcometals.com's spot bid prices, Kitco.com's Live Spot Gold bid prices and Brent Spot oil prices were as follows:

Copper	3.33 USD per pound
Nickel	12.72 USD per pound
Lead	1.37 USD per pound
Zinc	1.32 USD per pound
Gold	682.10 USD per troy ounce giving 21.93 USD per gram (1 troy ounce equals 31.1 grams)
Oil	73.17 USD per barrel
Silver	12.27 USD per troy ounce

Other Business: $500,000 Financings Accepted by TSX-V

Management is also pleased to report that the Company's CDN$500,000.00 convertible financings have been accepted by the TSX Venture Exchange. The loans (see News Release dated August 8th, 2007), have three year terms and the Company has the right at loan maturity to convert all loan principal and interest then outstanding into shares of the Company, subject to a minimum conversion price of $0.15. If such conversion is proposed to be effected at a price less than $0.25 per share, the Market Price of the Company's shares when the loan arrangements were announced on August 8, 2007 and the lowest conversion price permitted for a loan conversion under the Exchange Policy applicable to convertible loans, a further application will be required to be made to the Exchange under Policy 4.3 – "Shares for Debt"."

In accordance with TSX Venture Exchange policy, 666,666 two year non-transferable detachable warrants with an exercise price of CDN$0.30 per common share are being issued to the lenders at the date of the loan advance. A cash finder's fee of 10% is to be paid to an arms-length party.

Chairman and CEO Graeme Rowland remarked that, "This drill program is one of three being advanced by the Company; the other two are being drilled in Italy for antimony, silver and gold, and an investment in an oil and gas prospect, currently drilling in Texas. The Canadian projects hold base metal and precious metal potential. We are excited to test the underground potential of some of the better targets identified to date."

Adroit Resources is a mineral exploration company that is currently exploring for Gold, Silver and Antimony in Central Italy, diamonds, precious and base metals in the Temagami and Bancroft areas of Ontario, Canada and oil and gas in Texas, USA. In addition, Adroit is seeking new precious and base metal projects and oil and gas prospects to add to its expanding portfolio. The Company's issued and outstanding share capital is 30,724,815 common shares.

On behalf of the Board of Directors

Graeme Rowland
