MATERIAL CHANGE REPORT

1. Name and Address of Company: Adroit Resources Inc.

2. Date of Material Change: 29th November, 2007

3. News Release:

A news release dated 29th November, 2007 to Stockwatch and Market News.

4. Summary of Material Change:

Please see the attached news release.

5. Full Description of Material Change: See attached news release dated 29th November, 2007.

6. Reliance on subsection 7.1(2) or (3) of National Instrument 51-102: N/A

7. Omitted Information: Nil

8. Executive Officer:

Graeme Rowland, Chairman and President

9. Date of Report:

Dated at Vancouver, British Columbia this 29th November, 2007.

(signed "Graeme Rowland")

Graeme Rowland
Chairman & President

ADROIT RESOURCES INC.
(TSXV: ADT & FSE: A7V)

News Release: **DIAMOND DRILLING COMMENCED ON NIEMITZ PROPERTY**
Dated: November 29, 2007

Management is pleased to provide the following drilling update on its wholly owned Niemetz and Argentia Ridge Properties located in Ontario, Canada.

Niemitz Property Drilling. A minimum of 1,000 metres diamond drilling programme on the Niemitz Property commenced on November 26, 2007.

The drilling programme is designed to follow up on anomalies first identified by Quantec Geoscience Ltd. by geophysical surveys conducted in 2000. Field work in 2007, confirmed the presence of gold at surface, which further enhances the possibilities of success.

The Quantec Survey identified four discrete zones.and within each zone, there are multiple anomalies. The drilling will initially test three Time Domain IP anomalies, two in Zone 'C' and one in Zone 'D' which represent chargeability zones with signatures interpreted to be indicative for gold mineralization. These anomalies were rated as "1" by Quantec, as having the highest chance of success. The summer 2007 field season on the Niemetz Property confirmed gold mineralization on the Property. Out of 144 outcrop and trench grab samples, 10 returned values in excess of 0.5g/t Au, amongst which, four yielded values ranging between 2.4 and 6.7 g/t gold.

Four diamond drill holes are planned to initially test the most promising anomalies and drill results will be made available once the assay results have been received.

Niemitz Property Description. The Niemitz property consists of 8 contiguous claims (24 units) covering 384 hectares in Briggs Township, Ontario, Canada. The Niemetz property is located between two deposits, the former Teck Copperfields Mine, located 4 kilometres to the west, and the Diadem deposit, located 10 kilometres to the east. The Copperfields Mine produced, between 1954 and 1972, 684,000 tons of ore grading 6.48% Cu and 6.68 g/t Au; the Diadem-Copper-Nickel deposit has a known historical resource (non NI-43-101 compliant) of 500,000 tons @ 0.50% Cu, 0.1% Ni tested to a depth of 500 feet (J.R. Poloni, 2001).

Argentia Ridge Property. The 1,000 metre, three hole, diamond drill programme announced on October 30, 2007, was successfully completed on November 23, 2007, on the Argentia Ridge Property.

The diamond drill programme is aimed at testing Induced Polarization chargeability anomalies which mark a long, linear, disseminated sulphide zone in felsic volcanic rocks. A historic drill hole, (Medici Mineral Corp in 1999), intersected a 23m wide zone of disseminated sulphides; containing anomalous Zn and Cu. This sulphide

zone displays characteristics of halos surrounding volcanogenic massive sulphide deposits. The holes including the historic hole, are currently being surveyed with Pulse EM by Abitibi Geophysics. Results will be published when received.

Cont./.2..

Argentia Ridge Property Description. The Argentia Ridge Property (100% owned) consists of 14 contiguous mining claim blocks comprising 96 claim units. The property is located within South Lorrain Township (Sudbury Mining Division, Ontario), about 2.5 km south of the abandoned mining town of Silver Centre.

Historically. South Lorrain Township has produced some 23,338,906 ounces of silver. Production has mainly come from the bonanza silver vein system that occurs within the first 100 metres of metavolcanic rocks that overly a gently dipping western flank of a Nipissing Gabbro intrusive. Similar geology is repeated on the Argentia Ridge property where more than 5 kilometers of prospective strike length covers the metavolcanic and Nipissing Gabbro contact. Numerous historic pits and exploration and production shafts exist on the Property.

Guy Franceschi, Economic Geologist and a Director of Adroit Resources Inc. has verified and approved the geological information contained within this news release. Mr. Franceschi satisfies the requirements of a Qualified Person as defined in the National Instrument 43-101 (Standards of Disclosure for Mineral Projects).

Stock Option Plan Approved. The TSX Venture Exchange has accepted for filing the Company's annual renewal of its Rolling 10% Stock Option Plan which was approved by the Company's shareholders at the Annual General and Special Meeting held on September 7, 2007.

President's Comments. Graeme Rowland, President, said; "I look forward to the results from both of these promising properties."

Adroit Resources is a mineral exploration company that is currently exploring for Gold, Silver and Antimony in Central Italy and diamonds, precious and base metals in the Temagami/Cobalt and Bancroft areas of Ontario, Canada and oil and gas in Texas, USA. In addition, Adroit is seeking new precious and base metal projects and oil and gas prospects to add to its expanding portfolio. The Company's issued and outstanding share capital is 30,724,825 common shares and will be 35,192,575 common shares after the issuance of shares pursuant to the private placement announced on November 7, 2007.
