EMPIRE COMPLETES ADDITIONAL HIGH RESOLUTION AEROMAGNETICS SURVEY AT BUCK LAKE

Empire Metals Corp. ("Empire")(TSX.V-EP) is pleased to announce the completion of high-resolution airborne horizontal gradient and matrix VLF-EM survey on new property areas recently added to its Buck Lake Platinum, Palladium, Nickel Project. This 18.54 km survey compliments a previously flown magnetic and electromagnetic survey covering the central portion of the project. Terraquest Ltd. conducted the survey and the interpretation using inversion modeling. Results are expected to contribute to a better understanding of both the lateral and depth extent of the mafic/ultramafic body and serve as a guide for future exploration.

Empire's Buck Lake Platinum, Palladium, Nickel Project is located approximately 25km west of North American Palladium's 'Lac Des Iles Mine' in Northwestern Ontario.

Empire's field work has been aided by timber harvesting operations and associated road cutting which not only improved access to the property but also exposed new outcrops in previously densely forested areas.

The technical content of this news release has been reviewed and approved by Bohumil (Boris) Molak, PhD, P.Geo (BC), a Qualified Person as defined by National Instrument 43-101.

Empire is a Canadian exploration and development company with interests in the Fox Creek Lithium project in Alberta, the Graphite West Project, a prospective hydrothermal graphite exploration target located immediately west of Zenyatta Ventures Ltd.'s Albany hydrothermal graphite deposit, and the Gwyn Lake gold property in Ontario.
