PRESS RELEASE

ALMA PROVIDES FURTHER DETAILS ON PROPERTIES HELD BY PROMOTORA MINERA DIALEX S.A. DE C.V.

FOR IMMEDIATE RELEASE
April 19, 2006

Vancouver, British Columbia - Alma Resources Ltd. (TSX-V/NEX: "ALV.H") is pleased to provide further details on certain of the Silver, Gold, Base Metal (Cu, Pb, Zn) and Iron properties in Sinaloa State, Mexico held by Promotora Minera Dialex S.A. de C.V. ("Dialex"), as well as details of a new acquisition by Dialex. The Company also reports the results from its recent annual general meeting and the grant of incentive stock options.

DIALEX PROPERTIES

The following information on mineral properties held by Dialex has been supplied by Mr. Luc Lamarche P. Geol., a shareholder of Dialex and a "qualified person", as defined in NI 43-101 and has been reviewed and approved by Andre Ciesielski, P. Geol. a "qualified person" under NI 43-101, who is independent of both Dialex and the Company. Mr. Ciesielski has been retained by the Company to prepare the NI 43-101 technical reports on the material Dialex properties, and has recently returned from site visits to such properties.

Los Tacotes 1

According to "Consejo de Recursos Minerales" (Geological Survey of the Mexican government) (C de RM) reports, this gold-silver stockwork deposit with very easy access has been mined by local people for more than 75 years through a variety of cuts, wells and levels. C de RM reports state that one of the stopes, though very small (20 m x 7 m x 2.5 m), graded 2500 g/t Au and, more recently, that the property was exploited and milled at a rate of 30 t/day by Eng. Salvador Padilla from 1986 to 1990 in a structure having a width of 20 m and grading 6 to 8 g/t Au.

In April 2005, Mr. Lamarche carried out chip and channel sampling in the main face of the open pit. Results included 12 m at 2.45 g/t Au and 65 g/t Ag; 26 m at 31 g/t Ag (including 2 m at 4.36 g/t Au) and 29 g/t Ag; 18 m at 2.25 g/t Au and 28 g/t Ag; and 4 m at 0.79 g/t Au and 15 g/t Ag. Additionally, a selected grab sample taken in 1.0 m quartz vein approximately 100 metres southwest from the main face returned values of 12.6 g/t Au and 64 g/t Ag.

Barreteros

The Barreteros project is composed of five properties: Barreteros 1a (100 hectares), Barreteros 1b (151 hectares), Barreteros 2 (600 hectares), Barreteros 4 (550 hectares) and San Juan (200 hectares).

Barreteros 1b encompasses the town of Cosala. A selected grab sample taken by Mr. Yves Rougerie on the residential property of Alejandro Octavio Trueba Amador in Cosala returned a value of 1676 g/t Ag and 42.69% Cu. This sample was analysed by Intertek Testing Services Chimitec in Val-d'Or, Québec, Canada. According to locals in the town, as expressed to Mr. Lamarche, this is the kind of high-grade material that was mined at Barreteros 2 and 4.

Barreteros 2 and 4 and San Juan are contiguous and are situated 3 to 8 km northwest of Cosala. These properties were worked intensively by local miners until the end of nineteen century and during part of twentieth century. The old workings cover of an area of approximately 125 by 500 m near the top of the mountain, where the 15 m level has been partly mined. Several drifts, adits and ventilation/access raises were found in this area by Mr. Lamarche, and up to 5 artisanal smelters were operated to produce silver and copper from high-grade ore.

In May, 2005, reconnaissance survey and grab samples were taken by Mr. Lamarche over an area of approximately 2,300 x 600 m and outside the area of the old workings. A total of 16 samples were taken and returned the following ranges of assay results:

14 to 208 g/t Ag; 0.27 to 1.39g/t Au; 0,01 to 20.7% Cu; trace to 8.22% Pb and 0.04 to 3.43% Zn

This property has never been explored by diamond drilling.

Santo Nino

This property is located 15 km west of Cosala and covers two main showings, Santo Nino and Millionaria, where two adits, one 15 m long and one 20 m long, spaced 250 m apart, were sunk to mine the high-grade material. A total of four selected grab samples were taken by Mr. Lamarche in this area, as follows:

Two selected grab samples taken at the entrance and at the end of the Santo Nino adit assayed:

- Sample No. 111 - 36g/t Ag; 0.88% Cu; 0.98% Pb and 0.98% Zn
- Sample No. 112 - 112 g/t Ag; 0.30 % Cu; 1.73% Pb and 5.13% Zn

One selected grab sample taken at Millionaria assayed:

- Sample No. 114 - 0.17g/t Au; 369g/t Ag; 1.42% Cu; 2.51% Pb and 4.56% Zn

One selected grab sample taken in an abandoned tailings dump near the Santo Nino adit assayed:

- Sample No. 113 - 0.74g/t Au; 223g/t Ag; 1.26% Cu; 4.88% Pb and 10.56% Zn

La Gloria

The La Gloria project is approximately 30 kilometres southwest of Culiacan and owned 100% by Dialex. The concession was staked by Dialex to cover areas of old mining activity for gold and iron ore. According to C de RM reports, this property was in production from 1970 to 1981, when mineralized material (magnetite with 70% iron) was sent to Manclova's siderurgical plant in Coahuila. Dialex has entered into an option agreement with Cinco Construcciones S.A. de C.V. (Cinco acting as the operator for Shanghai Spirited Int. Trading Co. Ltd from China) for the exploitation of a magnetite deposit on the La Gloria concession. Under the agreement, Cinco will pay the sum of US $28,000 and pay a royalty of US $3.00 per ton mined, with initial production anticipated of 10,000 tonnes per day and planned expansion within 6 months up to 50,000 tonnes per day. However, readers are cautioned that there has been insufficient exploration to define a mineral resource at La Gloria and that it is uncertain if any further exploration will result in the delineation of a mineral resource, or that the proposed exploitation of any such resource will occur or prove to be economic.

El Zapote

The El Zapote silver-copper property consists of one exploration concession approximately fifteen kilometres north of Cosala and owned 100% by Dialex. Little information is available, but the area shows signs of historical workings. In May 2005, Mr. Lamarche took two samples from a mineralized ultramafic rock on the property, one of which was assayed for silver and copper and returned values of 180 g/t Ag and 3.2 % Cu.

All samples taken by Mr. Lamarche noted above were shipped to the ALS Chemex preparation laboratory in Hermosillo, Mexico then by airfreight to ALS Chemex, Vancouver for assaying. Systematic assaying of standards and blanks were performed for precision and accuracy.

La Seca 2 Fraction 1 Option

Dialex has recently entered into a letter of intent to earn up to 80% of the La Seca 2 Fraction 1 exploration concession from Scorpio Mining Corporation of Vancouver, B.C. The La Seca 2 Fraction 1 surrounds the Los Tacotes 1 and 2 and the La Gloria concessions, and is immediately to the east of the Barreteros 1A, 1B and 2 concessions. In order to acquire an initial 60% interest, Dialex is required to pay Scorpio an aggregate of USD 130,000 and issue 350,000 shares, and incur aggregate exploration expenditures of USD 1,000,000 on the property, all over a period of three years. Dialex can earn a further 20% by producing a bankable feasibility study. If Dialex earns the additional 20% (total of 80%), Scorpio will be carried to production and, in addition, will retain a 2% NSR (of which 1% can be acquired by Dialex for USD 2,000,000). The agreement with Scorpio is subject to completion of satisfactory due diligence, board approval and the settlement and execution of formal documentation.

As noted above, Mr. Ciesielski has just returned from property visits to the material Dialex properties, and is working on the NI 43-101 reports on such properties. Upon completion of the NI 43-101 reports, the Company will provide disclosure by way of a press release and will file the reports on SEDAR.

In addition to the foregoing properties, Dialex personnel have identified a number of other prospective mineral property acquisitions, and will continue with the evaluation and possible acquisitions of these properties.

ANNUAL GENERAL MEETING RESULTS

At the Company's annual general meeting held on March 13, 2006, shareholders re-elected Messrs. Lawrence Talbot, Aly Mawji and H. Keith MacDougall as directors. In addition, Mr. Luc Lamarche was elected as an additional director. All proposed resolutions were passed, including the required annual approval of the Company's rolling stock option plan. The directors subsequently appointed Mr. Talbot as Chief Executive Officer and Secretary, and Mr. Tony Ricci as Chief Financial Officer.

GRANT OF INCENTIVE STOCK OPTIONS

The Company has granted incentive stock options to directors, officers and consultants to purchase up to 800,000 common shares at a price of $1.20 and expiring on April 19, 2011.

ON BEHALF OF THE BOARD OF DIRECTORS

(signed) "*Lawrence Talbot*"

Lawrence W. Talbot,
Chief Executive Officer and Director

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of the content of this Press Release, which has been prepared by management.

This press release contains forward-looking statements within the meaning of Section 27A of the Securities Act and Section 27E of the Exchange Act. Such statements include, without limitation, statements regarding future anticipated exploration program results, the discovery and delineation of mineral deposits/resources/reserves, the potential exploitation of the La Gloria property by others, business and financing plans, business trends and future operating/royalty revenues. Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Forward-looking statements are typically identified by words such as: believe, expect, anticipate, intend, estimate, postulate and similar expressions, or are those, which, by their nature, refer to future events. The Company cautions investors that any forward-looking statements by the Company are not guarantees of future results or performance, and that actual results may differ materially and adversely from those in forward looking statements as a result of various factors, including, but not limited to, variations in the nature, quality and quantity of any mineral deposits that may be located, variations in commodity prices, the failure of the Company to complete the acquisition of Dialex, the Company's or any third party's ability to obtain any necessary permits, consents or authorizations required for its activities, to produce minerals from its properties successfully or profitably, to continue its projected growth, to raise the necessary capital or to be fully able to implement its planned business strategies.
