Datrix joins the Intermonte Valore Italia Index

Milan, 2 July 2026 – **Datrix S.p.A. ("Datrix" or the "Company")**, a company whose shares are listed on Euronext Growth Milan multilateral trading facility (ticker: DATA.MI – ISIN IT0005468357) and leading the first international ecosystem of vertical Artificial Intelligence software companies, proudly announces that it has been selected among the one hundred companies listed on Borsa Italiana that make up the **Intermonte Valore Italia Index**, dedicated to SMEs with a market capitalization below €1bn and not included in the FTSE MIB.

The Index was created with the aim of enhancing the universe of listed Italian small and medium-sized enterprises, creating a meeting point between entrepreneurship, capital markets and the Italian economic system. It represents a concrete snapshot of the best expertise within the Italian economy, helping to broaden and diversify investment opportunities compared with traditional indices, for both domestic and international investors.

The companies are selected through rigorous technical and financial criteria designed to ensure adequate levels of liquidity, transparency and investability, including minimum free float, solid governance standards, analyst coverage, financial sustainability and level of indebtedness, as well as representativeness within the Index itself.

The Index is part of **PMI2Change**, the innovative project by Banca Generali presented on 1 July 2026 at Palazzo Mezzanotte, the headquarters of Borsa Italiana, which aims to support the growth and competitiveness of Italian entrepreneurs, fostering the development of listed Italian SMEs. The project addresses the issue of limited liquidity and valuation of listed SMEs, helping to create the best conditions for a more efficient match between capital and companies.

The initiative was created by leveraging the expertise of Intermonte, a leading Italian operator in the sector with over thirty years of experience in financial markets, particularly in SME research, sales & trading, market making and investment banking, and an integral part of the Banca Generali Group since the beginning of 2025.

Starting from the Index, Banca Generali, together with Investlinx and Intermonte, presented a new actively managed and PIR-compliant ETF that will invest primarily in the universe defined by the Index itself. Banca Generali has committed to supporting the launch of the instrument with an initial fundraising of €100mn in the first few months, with gradual growth in exposure until reaching €500mn over the medium term. It is therefore estimated that the initiative could help generate new investment flows of €1-2mn per day, representing over 5% of the Index's free float.

For Datrix, being part of PMI2CHANGE represents an important recognition of the expertise developed in recent years and of the ability to transform it into technologies designed to support the real adoption of Artificial Intelligence within companies. The objective is not only to develop AI solutions, but to create the conditions for these solutions to be understood, integrated, governed and turned into value within organizations' real processes.

This vision has led to the development of a proprietary platform for AI adoption that integrates technology, governance and control, supported by vertical solutions designed to address specific business needs in a scalable, secure and value-oriented way.

“We are pleased to be part of PMI2CHANGE, an initiative that helps describe and enhance a fundamental component of Italy’s innovation ecosystem: listed, entrepreneurial and specialized companies capable of competing in highly transformative markets,” said **Fabrizio Milano d’Aragona, CEO and Co-Founder of Datrix**. *“In our case, this transformation is driven by applied Artificial Intelligence: an industrial technology that enters processes, enables better decisions, increases efficiency and generates tangible value. We believe that initiatives of this kind are important to multiply investments in listed Italian SMEs, helping the production system to recognize the importance of innovation and of the conscious adoption of AI in a concrete, sustainable and governed way.”*
