

(the “Company”)

INTERIM MANAGEMENT’S DISCUSSION AND ANALYSIS – QUARTERLY HIGHLIGHTS

For the Three Months Ended March 31, 2021

General

This interim Management’s Discussion and Analysis (“Interim MD&A”) supplements, but does not form part of, the unaudited condensed interim consolidated financial statements of the Company for the three months ended March 31, 2021. The following information, prepared as of May 27, 2021, should be read in conjunction with the Company’s unaudited condensed interim consolidated financial statements for three months ended March 31, 2021 and the related notes contained therein. The Company reports its financial position, results of operations and cash flows in accordance with International Financial Reporting Standards (“IFRS”). In addition, the following should be read in conjunction with the consolidated financial statements of the Company for the year ended December 31, 2020 and the related MD&A. All amounts are expressed in Canadian dollars unless otherwise indicated. The March 31, 2021 condensed interim consolidated financial statements have not been reviewed by the Company’s auditors.

Additional information relevant to the Company’s activities can be found on SEDAR at (www.sedar.com).

Forward Looking Information

This Interim MD&A contains certain statements which constitute forward-looking information within the meaning of applicable Canadian securities legislation (“Forward-looking Statements”). All statements included herein, other than statements of historical fact, are Forward-looking Statements and are subject to a variety of known and unknown risks and uncertainties which could cause actual events or results to differ materially from those reflected in the Forward-looking Statements. The Forward-looking Statements in this Interim MD&A include, without limitation, statements relating to:

- mineral reserves or resources as they involve the implied assessment, based on estimates and assumptions, that the resources described exist in the quantities predicted or estimated and can be profitably produced in the future;
- the Company’s planned exploration activities for its mineral properties;
- the intended use of proceeds received from past and possible future financing activities;
- the sufficiency of the Company’s cash position and its ability to raise equity capital or access debt facilities; and
- maturities of the Company’s financial liabilities or other contractual commitments.

Often, but not always, these Forward-looking Statements can be identified by the use of words such as “anticipates”, “believes”, “plans”, “estimates”, “expects”, “forecasts”, “scheduled”, “targets”, “possible”, “strategy”, “potential”, “intends”, “advance”, “goal”, “objective”, “projects”, “budget”, “calculates” or statements that events, “will”, “may”, “could” or “should” occur or be achieved and similar expressions, including negative variations.

Forward-looking Statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any results, performance or achievements expressed or implied by the Forward-looking Statements. Such uncertainties and factors include, among others:

- uncertainty of mineral reserve and resource estimates;
- risks associated with mineral exploration and project development;
- fluctuations in commodity prices;
- fluctuations in foreign exchange rates and interest rates;
- credit and liquidity risks;
- changes in national and local government legislation, taxation, controls, regulations and political or economic developments in countries in which the Company does or may carry on business;
- reliance on key personnel;
- property title matters;
- local community relationships;
- risks associated with potential legal claims generally or with respect to environmental matters;
- adequacy of insurance coverage;
- dilution from further equity financing;
- competition;
- uncertainties relating to general economic conditions; and
- risks relating to a global pandemic, including the coronavirus COVID-19, which could result in government imposed restrictions that could cause a slowdown in global economic growth and impact the Company's business, operations, financial condition and share price;

as well as those factors referred to in the "Risks and Uncertainties" section in this Interim MD&A.

Forward-looking Statements contained in this Interim MD&A are based on the assumptions, beliefs, expectations and opinions of management, including but not limited to:

- all required third party contractual, regulatory and governmental approvals will be obtained for the exploration and development of the Company's properties;
- there being no significant disruptions affecting operations, whether relating to labor, supply, power, damage to equipment or other matter;
- permitting, exploration and development activities proceeding on a basis consistent with the Company's current expectations;
- expected trends and specific assumptions regarding commodity prices and currency exchange rates;
- prices for and availability of fuel, electricity, equipment and other key supplies remaining consistent with current levels; and
- the accuracy of the Company's current mineral resource estimates.

These Forward-looking Statements are made as of the date hereof and the Company disclaims any obligation to update any Forward-looking Statements, whether as a result of new information, future events or results or otherwise, except as required by law. There can be no assurance that Forward-looking Statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, investors should not place undue reliance on Forward-looking Statements.

Business of the Company

The Company is a Vancouver-based mineral exploration entity engaged in the acquisition and exploration of precious and base metals properties. The Company is targeting early- to mid-stage exploration projects in jurisdictions which are mining-friendly, with strong mining codes, and with excellent geological potential. The Company's exploration activities are currently focused in Serbia and Bulgaria.

Due to restrictions on travel and for the safety of our employees and contractors arising from the COVID-19 pandemic, the Company has curtailed certain operations for the time being, with the majority of corporate and operational staff working from home or remotely where possible. Personnel will return to the field and office once safe and cost effective to do so, with the cash position of the Company being preserved in the meantime.

In February 2021, Mr. Simon Ridgway resigned as Executive Chairman and a Director of the Company, and Andrei Kroupnik was appointed to the Board of Directors.

Property Review

Serbia - Overview

In mid-2016, the Company signed a strategic alliance with Fortuna Silver Mines Inc. (NYSE: FSM) (TSX: FVI) (“Fortuna”), for the purposes of generating gold and silver exploration projects in Serbia by targeting gold-silver epithermal systems associated with the Oligo-Miocene igneous belt within Serbia. This belt of rocks runs NW-SE across much of the country, and is under-explored for gold and silver, despite an abundance of freely available geological data. Much of this information was generated by the Yugoslav State, during the 1960s and 1970s, through phases of national-scale geological mapping and systematic exploration for lead and zinc.

The Company was granted five exploration licences, two of which comprise the Tlamino Project. Exploration drilling programs conducted at the Tlamino Project in 2018 and 2019 led to the drill-definition of a zone of continuous gold mineralization at the Barje Prospect at Tlamino measuring 700 metres by 250 metres. In January 2020, the Company established a maiden Mineral Resource Estimate for the Barje prospect (see “Mineral Resource Estimate” below).

The above programs were fully funded by Fortuna and directed by a joint Fortuna-Medgold technical committee pursuant to the terms of the Tlamino Option Agreement announced on March 7, 2017.

After a reassessment of previous exploration data, the Company relinquished the Crnook Licence further to which it then held four granted exploration licences, each covering approximately 100 square kilometres. These licences were located adjacent to the borders of North Macedonia and Bulgaria, in the southeast of Serbia, and include the Donje Tlamino and Surlica-Dukat licences, which comprise the Tlamino Project then optioned to Fortuna, and the adjacent Ljubata and Radovnica licences.

In October 2020, the Serbian Ministry of Mining and Energy issued new exploration licenses for the Donje Tlamino and Surlica Dukat properties that comprise the Tlamino Project. The licenses are each valid for three years and are renewable for terms of three and then two years. At the same time a new exploration license, Zuti Kamen, which covers an area of approximately 6 square kilometers adjoining the southern flank of Surlica Dukat, was also awarded on similar terms. The Radovnica licence was not renewed due to a shortfall in exploration expenditures arising out of inadequate geological merit, and the Ljubata license was relinquished, also on the grounds of inadequate geological merit.

The Tlamino Gold Project, Serbia

The Tlamino Gold Project is located in southern Serbia, and includes three prospects: Barje, Liska and Karamanica. Outcropping mineralization was first observed at the Barje Prospect by Yugoslav State agencies in the 1950s and 1960s when a short adit was opened but no drilling was carried out. The prospect was then held by private and public companies between approximately 2005 and 2012 during which time limited drilling failed to intersect significant mineralization.

The Company, with its Option partner Fortuna, carried out drilling at the Barje, Liska and Karamanica prospects in multiple phases between May 2018 and October 2019. A total of 33 diamond drill holes were completed at the Barje prospect over 4,991.5 metres, which identified gold and silver mineralization with lesser amounts of lead, zinc and copper. Drilling at the Liska prospect included 10 drill holes over 2,139.4 metres. While this drilling identified the presence of mineralization, the metal grades returned are not considered to be economically significant, or, where potentially economic, are currently interpreted to be isolated with a lack of demonstrated continuity. Drilling of 10 holes at the Karamanica prospect over 1,996.5 metres returned only weak mineralization associated variously with fault zones, dark carbonaceous schists, and the margins of porphyritic intrusions.

Preliminary Economic Assessment

On January 30, 2020, the Company announced a maiden Mineral Resource Estimate for the Barje Prospect and, in January 2021, the Company completed a Preliminary Economic Assessment (“PEA”) for the Barje Prospect. The purpose of this study was to confirm the self-standing economics of the Tlamino Project, and specifically its capacity to yield a marketable metal concentrate. Addison Mining Services Ltd. and Bara Consulting Ltd., both of the United Kingdom, were appointed as leaders of the PEA and metallurgical studies. Reach Partners Limited, also of the United

Kingdom, was engaged to provide guidance in the fields of concentrate specification and marketing terms. Unless otherwise stated, all tonnes referenced in the PEA summary set out below are metric, and ounces are troy ounce.

The highlights of the PEA are as follows:

- Based on simple open-pit mining methods and the production of a flotation concentrate via conventional processing techniques, the pre-tax NPV of the Project, at a discount rate of 8%, is US\$101M, its IRR 49%, and its operating margin 61%.
- The up-front capital cost of the Project is US\$74M (inclusive of a 15% contingency margin and further study and engineering costs) with payback achieved in two years.
- Life of mine C1 cash costs are US\$464/oz Au, and life of mine all-in sustaining costs (“AISC”) are US\$522/ounce Au.
- A gold price of US\$1500/oz and a silver price of US\$16.50/oz was used in the study. At an approximate spot gold price of US\$1,800/oz, the post-tax NPV of the Project, at a discount rate of 8%, is US\$139M, and its IRR 69%.

It is now the intention of the Company to pursue a program of infill drilling at Tlamino with the objective of upgrading the current Inferred Resource to the Indicated category, and the completion of a Pre-Feasibility Study thereafter.

The key financial metrics of the Project are summarized in Table 1.

Table 1: Barje PEA Key Financial Metrics

Metric	Value	Units
Revenue	458	US\$M
Operating Cost	181	US\$M
Peak Funding Requirement	37	US\$M
Project Capital Cost	74	US\$M
Free Cashflow	153	US\$M
LOM C1 Cash Cost	464	US\$/oz
LOM AISC	522	US\$/oz
Pre-Tax Project NPV8	101	US\$M
Post-Tax Project NPV8	86	US\$M
Pre-Tax Project IRR	49	%
Post-Tax Project IRR	46	%
Operating Margin	61	%
Payback Period	2	years

The PEA is preliminary in nature and is based on Inferred Mineral Resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as Mineral Reserves. As such there may be no certainty that the PEA will be realized. The study was undertaken by Addison Mining Services Ltd., Bara Consulting Ltd. and Reach Partners Limited, all of the United Kingdom. A Technical Report for the Project has been filed on <http://www.sedar.com>.

Basis of Preliminary Economic Assessment

Scoping-level design and preliminary economic analysis thereof was undertaken for the Barje deposit of the Tlamino Project. The Mineral Resource Estimate for Barje as announced on January 30, 2020 has been updated in accordance with the metallurgical testwork and mining parameters identified during the course of the current study. An updated

Inferred Mineral Resource of approximately 7.1 Mt at 2.5 g/t Au and 38 g/t Ag, containing approximately 570,000 oz of Au and 8.8 Moz of Ag is herein stated and has been used as a basis for the PEA.

Mining via open pit methods using a conventional truck and shovel fleet is contemplated, delivering approximately 600,000 tpa of two Run of Mine (“ROM”) material types - High-Grade Breccia (“HG_BX”) and Low-Grade Schist (“LG_Sch”) - to stockpile for processing, with a life-of-mine stripping ratio of approximately 4:1. On site mineral processing is via grinding and flotation to a bulk Au-Ag bearing sulphide concentrate for sale to potential offtake customers in Asia. Preliminary economic analysis has been performed in accordance with the preliminary mine design and schedule, metallurgical testing, and concentrate payability analysis developed in the study, and the estimates and analyses therein have been prepared to scoping level (+/-30%). Oxidized material from the Mineral Resource was not considered by the PEA, and the nearby prospects at Liska and Karamanica were similarly omitted. A preliminary site layout, subject to further study, permitting and land access is shown in Figure 1. Key project parameters are presented in Table 2.

Figure 1: Preliminary Site Layout, Barje (looking west)

Table 2: Summary of Project Parameters

Parameter	Value	Units
LOM Production Rate	710	ktpa
Waste Mining Rate	3,310	ktpa
LOM Average Strip Ratio	4:1	Waste t:ROM t
Average Mined Gold Grade	2.6	g/t
Total Mined Gold	390	koz
Total Mined Silver	4,022	koz
Cut-off Grade - HG_BX	0.6	g/t AuEq
Cut-off Grade - LG_Sch	1.14	g/t AuEq
LOM	8	years
Mining Cost - OPEX	2.30	US\$/t mined
Process Cost - OPEX	11.50	US\$/t processed
Base Case Au Price	1,500	US\$/oz
Base Case Ag Price	16.50	US\$/oz

Mining

The Barje deposit is relatively flat-lying and situated beneath shallow to medium-depth overburden. While mining via both open pit and underground techniques were initially considered, an open pit method was ultimately selected for the PEA on account of the overall low volume of waste and the generally low RQD of both waste and ore material. The PEA contemplates application of open pit mining methods using hydraulic excavators and wheel loaders charging articulated dump trucks for haulage of both waste and ROM material. Mining activities will be performed on a contractor basis, and include free-digging of weathered material, and drilling and blasting of fresh rock. Pre-production mining includes removal and stockpiling of topsoil is also assumed.

Mining is expected to be completed over four pit stages with an active life of mine (“**LOM**”) of approximately eight years, followed by a further two years of production from stockpile reclamation. Pit and schedule optimizations prioritize mining and processing of HG_BX material where possible, with LG_Sch material stockpiled and processed periodically throughout the LOM. Mining parameters are summarized in Table 3.

Table 3: Summary of Mining Parameters

LOM Summary	Total	Units
Total Rock	31.7	Mt
Total Waste	26.0	Mt
Total ROM	5.69	Mt
LOM Average Strip Ratio	4:1	Waste t:ROM t
Plant Feed (All)	5.69	Mt
	2.62	g/t Au
	38.9	g/t Ag
Plant Feed (HG_BX)	3.57	Mt
	3.43	Au g/t
	56.1	Ag g/t
Plant Feed (LG_Sch)	2.11	Mt
	1.25	Au g/t
	9.9	Ag g/t
LOM	8	years
Stockpile Reclaim	2	years
Total	10	years
Peak Production Total Rock	10.6	Mt/year
Peak Production Waste	10.0	Mt/year
Peak Production ROM	1.4	Mt/year
Average Production Total Rock	4.0	Mt/year
Average Production Waste	3.3	Mt/year
Average Production ROM	0.7	Mt/year

Processing

Test work on Barje samples reported by the Company on October 28, 2020 demonstrated the production of a flotation concentrate at a primary grind of 75 µm grading 48.9 g/t Au and 824 g/t Ag with recoveries to concentrate of 83.4% for gold and 82.4% for silver from a composite sample representing the HG_BX material. A second composite sample representing the LG_Sch material produced a flotation concentrate at a similar grind grading 24.4 g/t Au and 238 g/t Ag with recoveries to concentrate of 71.2% for gold and 79.2% for silver. Laboratory test work shows that the same grind size and flotation parameters are applicable to both rock types and can result in commercially viable concentrates. These results were incorporated into the PEA and were used in re-assessment of the Mineral Resource Estimate.

A flowsheet contemplating crushing, grinding, and rougher plus cleaner flotation to a bulk Au-Ag concentrate has been developed based on the metallurgical test program. It is envisaged that the two ROM material types be processed in the same concentrator but at different times, i.e. on a campaign basis, in order to maximize revenue from the HG material.

The PEA provides that ROM material is hauled by trucks and tipped on a storage and blending stockpile. Ball milling with feed prepared by three-stage crushing and screening is further assumed as it is deemed to represent a robust option for this material type. A rougher flotation stage followed by two stages of cleaner flotation are sufficient to produce acceptable concentrate of the previously reported specification. Concentrates are dewatered by means of a pressure filter, with concentrate filter cake stored and blended before transport by road and sea for processing at toll facilities in Asia.

Tailings are densified in a high-rate thickener before final dewatering by means of a pressure filter before storage in a dry-stack type Tailings Storage Facility (“TSF”), thus improving the geotechnical properties of the TSF and maximizing recycling of process water. Key processing parameters are presented in Table 4.

Table 4: Summary of Mineral Processing Parameters

Parameter	Value	Units
Flotation Throughput	600	ktpa
Au Recovery HG_BX	85.8	%
Ag Recovery HG_BX	84.3	%
Au Recovery LG_Sch	76.5	%
Ag Recovery LG_Sch	84.3	%

Au grade HG conc	49	g/t
Ag grade HG conc	824	g/t
Au grade LG conc	24	g/t
Ag grade LG conc	238	g/t
Recovered Au	390	koz
Recovered Ag	4,022	koz
Payability – HG conc	75	%
Payability – LG conc	40	%
Flotation Process Costs - OPEX	11.50	US\$/processed t
G&A	5.80	US\$/processed t
Concentrate Transport Cost	3.24	US\$/processed t

Capital Costs

The Project is well-served by existing infrastructure including sealed roads and a high voltage power line adjacent to the property. Capital costs for mine development, mine infrastructure, processing plant, and surface infrastructure including mine offices, control, plant building, common workshop and stores, changehouse, water, powerline and substation, and earthworks including tailings, roads and platforms were estimated based on current designs and quotes from recent comparable projects by Bara Consulting.

Plant capital provides for the design and construction of a 600,000 tpa flotation plant including crushing, grinding, froth flotation, concentrate and tailings handling facilities including filtration of tailings for dry stacking. Infrastructure includes for mine support infrastructure, plant infrastructure, dry stack tailings storage facility, power (including backup 35 kV line), water and internal roads. A summary is presented in Table 5. Estimates for closure were also assessed during the ESIA review process.

Table 5: Capital Cost Estimates

Description	Value	Units	Cost
Mine Development	3.25	Mt	US\$7.5M
Process Plant	600,000	tpa	US\$34.6M
Surface Infrastructure			US\$14.0M
Indirect Costs	15	%	US\$8.4M
Contingency	15	%	US\$9.7M
Total			US\$74.2M

Operating Costs

A high-level breakdown of operating costs was developed based on current designs and quotes from recent similar projects by Bara Consulting. Mine operating costs include ore mining and waste mining at US\$2.30/t, plus a stockpile reclaim cost for LG material of US\$1/t equating to US\$0.50/ROM tonne. Process costs include crushing, grinding, flotation, concentrate handling and tailings handling (including filtration) for 600,000 tpa flotation feed. G&A includes on-mine administration and general costs. Concentrate transport is costed for delivery of concentrate CIF to customers in China. Details are presented in Table 6 below.

Table 6: Operating Cost Estimates

Description	Units	Cost/Unit
<i>Mining</i>		
Mining Cost - ROM	t	US\$2.80
Mining Cost - Waste	t	US\$2.30
<i>Processing</i>		
Processing	t	US\$11.50
Conc Transport (Per ROM t)	t	US\$3.24
G&A	t	US\$5.80

Economics and Sensitivities

The post-tax NPV of the Project, at a discount rate of 8%, is US\$86M, with an IRR of 46%, and an operating margin of 61%. Up-front capital is US\$74M with payback achieved in two years. Life of mine C1 cash costs are US\$464/oz Au, and life of mine AISC are US\$522/oz Au. Sensitivity analysis of key capital and operating cost parameters, and gold price indicates significant upside potential to the project are shown in Figure 2. The Project was demonstrated to be most sensitive to variance in gold price, and least sensitive to variances in capital cost. Specific post-tax NPV and IRR sensitivity ranges are presented in Table 7.

Table 7: NPV and IRR sensitivities, Barje Prospect

Variance	Gold Price US\$/oz	NPV (8%)	IRR	Capital Cost (US\$M)	NPV (8%)	IRR	Operating Cost US\$/t	NPV (8%)	IRR
-30%	1050	10	12	52	102	72	24	118	63

Figure 2: Post-Tax NPV and IRR Sensitivity, Barje Deposit

Mineral Resources

Mineral Resources, reported in accordance with National Instrument 43-101, *Standards of Disclosure for Mineral Projects*, (“NI 43-101”) and the Canadian Institute of Mining, Metallurgy and Petroleum (CIM) Definition Standards, have been re-estimated for the Barje prospect of the Tlamino Project incorporating updated metallurgical testwork and mining parameters identified during the PEA. No Mineral Resources for other prospects within the Tlamino Project (Liska, Karamanica) have as yet been declared.

The estimated Mineral Resource for Barje, using various cut-off grades for their respective material types, is approximately 7.1 Mt at 2.5 g/t Au and 38 g/t Ag in the Inferred category, and containing 570,000 oz of Au and 8.8

Moz of Ag. This equates to approximately 2.9 g/t AuEq or 670,000 oz AuEq. It is the opinion of the Qualified Person for the Mineral Resource Estimate that all elements included in the Au Equivalent calculation (gold and silver) have a reasonable prospect of being recovered and sold.

The updated Mineral Resource Estimate has an effective date of January 7, 2021 and supersedes the previous initial Mineral Resource Estimate announced on January 30, 2020; there has, however, been no material change to the estimate in terms of tonnage, grade and contained metal. See Table 8 for further information relating to the updated Mineral Resource Estimate. A north-south cross-section illustrating the optimized Barje pit and block model is shown in Figure 3.

Figure 3: North-south cross-section illustrating the optimized Barje pit and block model

No estimates of Mineral Reserves have been completed. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.

The Mineral Resources extend from surface to a depth of approximately 110 metres, are laterally extensive over an area of approximately 600 metres from east to west and approximately 350 metres north to south. The thickness of resource mineralization ranges from approximately 10 to 40 metres with some isolated thinner areas. It is closed by bounding faults to the north and south and by drilling to the east and west. There remains some possibility of identifying additional mineralization via infill drilling in areas where the model is currently interpreted to pinch and in which data are sparse, and in the northwest corner of the area of mineralization.

Table 8: Mineral Resource Estimate, Barje Prospect

Tonnes	Density	AuEq		Au		Ag	
		g/t	Contained oz	g/t	Contained oz	g/t	Contained oz
		<i>Total Inferred Resources</i>					
7,100,000	2.7	2.9	670,000	2.5	570,000	38	8,800,000
Including							
<i>High Grade Breccia</i>							
3,200,000	2.8	4.7	470,000	3.9	400,000	65	6,700,000
<i>Low Grade Schist</i>							
2,400,000	2.7	1.2	96,000	1.1	88,000	8.4	650,000
<i>Partially Oxidized Material</i>							
1,500,000	2.5	2.1	100,000	1.7	87,000	29	1,400,000

Notes to the Mineral Resource Estimate:

1. The independent Qualified Person for the Mineral Resource Estimate, as defined by NI 43-101, is Mr. Richard Siddle, MSc, MAIG, of Addison Mining Services Ltd since November 2014. The effective date of the Mineral Resource Estimate is January 07 2021.
2. These Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred Resources in this Mineral Resource Estimate are uncertain in nature and there has been insufficient exploration to define these Inferred Resources as Indicated or Measured, however it is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. Additional drilling is however required to increase the confidence in the Mineral Resource; increased levels of information brought about by further drilling may serve to either increase or decrease the Mineral Resources.
3. Mineral Resources reported in the above table are presented as undiluted and in-situ for an open-pit scenario and are considered to have reasonable prospects for economic extraction. The Mineral Resources constrained by open pit optimization.
4. Break even cut-off grades were estimated for each material type of 0.6 g/t, 0.8g/t and 0.5 g/t AuEq for the High Grade Breccia, Low Grade Schist and Partially Oxidized materials respectively, these cut-off grades were used in Resource Reporting. The cut-off grades were calculated on the basis of the following assumptions: a gold price of US\$1500/oz, a silver price of US\$16.5/oz, mining costs of US\$2.3/t, processing costs including tailings disposal of US\$10/t for sulphide rock and US\$12/t for oxide, G&A costs of US\$4/ROMt and transport costs of US\$2/ROMt.
5. Per metallurgical test work completed to date, recovery to concentrate after flotation of 85.8% for gold and 84.3% for silver were used for the High Grade Breccia material with 75% payability. For the Low Grade Schist recoveries used were 76.5% for gold and 82.7% for silver with 60% payability. For the Partially Oxidized material 80% recovery via leaching for gold and silver was assumed with 98% payability. 5% gross royalty was applied to both metals.
6. Geological and block models for the Mineral Resource Estimate used data from 33 surface drillholes performed by Medgold in 2018 and 2019; data from four drillholes completed by Avala Resources Ltd., a prior operator, were used to constrain the model though they did not intercept significant mineralization. The drill database was validated prior to resource estimation and QA/QC checks were made using industry-standard control charts for blanks, core duplicates and commercial certified reference material inserted into assay batches by Medgold and by comparison of umpire assays performed at a second laboratory. No QA/QC was possible on the data relating to the drilling by Avala.
7. The geological model as applied to the Mineral Resource Estimate comprises two mineralized domains, a shallowly inclined high-grade hydrothermal breccia unit and a lower-grade schist unit immediately overlying the hydrothermal breccia. Individual wireframes were created for each domain. Weathering domains of fresh and partially oxidized material were defined within the two mineralized domains.
8. The block model was prepared using Micromine version 2020, Services Pack 1, A 10 m x 10 m x 4 m block model was created with sub-blocks of minimum 2 m x 2 m x 2 m on domain boundaries. Grade estimation from drillhole data was carried out for Au, Ag, As, Cu, Pb, Zn, Fe, S using Ordinary Kriging and was validated by comparison of input and output statistics, kriging neighbourhood analysis and by inspection of the assay data and block model in cross section. A gold equivalent (AuEq) grade was calculated for each block using the formula $AuEq = ((Ag \text{ g/t}) \times 0.011)) + (Au \text{ g/t})$ for the High Grade Breccia and Partially Oxidized materials and $AuEq = ((Ag \text{ g/t}) \times 0.012)) + (Au \text{ g/t})$ for the Low Grade Schist.
9. Bulk density values were calculated for each block of the model based on a broad linear relationship observed between 152 measured bulk density values within the mineralized domains and the assayed values of As, Cu, Fe, S, Pb and Zn. Blocks within the partially oxidized material were assigned a single bulk density value of 2.54 g/cm³.
10. Estimates in the above table have been rounded to two significant figures.
11. CIM Definition Standards for Mineral Resources have been followed.

12. The independent Qualified Person for Resources is not aware of any additional known environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues that could materially affect the Mineral Resource Estimate.

Fortuna Agreements

Pursuant to the Tlamino Option Agreement signed in March 2017, as amended, Fortuna exercised its option to acquire an initial 51% interest in the Tlamino Project having spent a minimum of US\$3.0 million on exploration of the Tlamino Project prior to the third anniversary of the date of the Option Agreement.

In December 2020, the Company entered into a definitive agreement with Fortuna whereby the Company was granted an exclusive option (the “Option”) to purchase Fortuna’s 51% interest in the Tlamino Project for a cash consideration of US\$3.468 million. The Option is valid for three years and is exercisable upon the earlier of (i) the expiry of the term of the Option, (ii) the date of completion of a sale by the Company of a 100% interest in the Tlamino Project to a third party, or (iii) the date of completion of a merger between the Company and a third party.

Should the Company not complete a sale of the Tlamino Project or corporate merger within the term of the Option, the Company will transfer its undivided 49% interest in the Tlamino Project to Fortuna for no consideration, such that Fortuna will then hold an undivided 100% interest in the Tlamino Project.

If the Company completes a sale of the Tlamino Project or corporate merger as described above and receives consideration attributable to the Project in excess of US\$13 per ounce of the Tlamino Project’s inferred mineral resource, the Company will pay to Fortuna an asset sale bonus equal to 10.2% of any amount in excess of US\$13 per ounce, less all the Company’s costs related to the sale or corporate merger.

At the time of signing of the definitive agreement, the Company and Fortuna had one common director.

Zlogosh Property, Bulgaria

In April 2020, the Company entered into an exclusive Letter Agreement with Gecon EOOD with respect to an Exploration License application made by Gecon at Zlogosh (“Zlogosh”, the “Zlogosh Property”), Kyustendil Oblast, western Bulgaria. The main mineralized targets at Zlogosh are situated approximately 40 kilometres by road from the Company’s Tlamino Project in Serbia, with which they appear to share considerable geological similarity.

Work by previous operators at Zlogosh identified multiple gold-in-soil anomalies including a 1,350 metre by 600 metre anomaly named the Zdravkov Dol target. Results from limited trench sampling at Zdravkov Dol returned intervals including 4.70 g/t Au over 10.0 metres and 2.21 g/t Au over 8.0 metres. Other gold-in-soil targets include Kretsul, which returned 5.61 g/t Au over 4.0 metres in trench sampling, and Dobri Dol which returned 3.04 g/t Au over 10.0 metres and 8.64 g/t Au over 5.0 metres in trenching. The location of mineralized targets at Zlogosh is shown in Figure 2. Reported soil and trench sample results within the Zlogosh Property are the work of previous operators; this work has not been verified by the Qualified Person. Details of sample collection, preparation and analysis are not known, and no QAQC data have been reviewed for the reported work. Similarity of geology between the Zlogosh Property and the Tlamino Project is not evidence for similarity of mineralization.

Subject to satisfactory completion of due diligence and completion of permitting, the Company is planning to conduct drilling and other exploration activities at Zlogosh to test a conceptual exploration target of a similar or greater order than that seen at the Tlamino Project (see the Company’s news release dated January 30, 2020). Extensive historical datasets of stream sediment, soil and rock samples are available for Zlogosh, and the Company intends to apply its understanding gained at Tlamino to these similar and highly prospective targets. The Company remains committed to the advancement of the Tlamino Project in parallel with activities at Zlogosh.

Under the terms of the Letter Agreement, the Company has the right to complete certain due diligence activities regarding Zlogosh which, if satisfactory, give the Company the right to enter into an option agreement with Gecon EOOD. Certain site and administrative aspects of the aforementioned due diligence activities are on hold due to restrictions brought about by the COVID-19 pandemic and are duly provided for under the terms of the Letter Agreement. The Letter Agreement provides that said option agreement will allow the Company to earn an initial 51% interest in Gecon EOOD by financing approximately €330,000 in permitting and permitting-related expenditures, followed by a second option to earn a further 44% interest in Gecon EOOD by incurring approximately €650,000 in exploration expenditures. The remaining 5% interest in Gecon EOOD may be purchased by the Company for €200,000

in cash on the third anniversary of the Zlogosh Exploration License once awarded or, at the election of the residual shareholder, for €200,000 in shares of the Company subsequent to the attainment of exploration expenditures to the value of €1,000,000. Gecon EOOD is a private company incorporated under the laws of the Republic of Bulgaria.

Qualified Persons

Mr. Thomas Sant, FGS, CGeol, EurGeol, is the Company's Qualified Person as defined by National Instrument 43-101, and has approved the disclosure of the technical information in this Interim MD&A.

The independent Qualified Persons as defined by NI 43-101 regarding the PEA summary technical information included in this Interim MD&A are Mr. Richard Siddle, MAIG, of Addison Mining Services Ltd for Mineral Resources; Dr. Matthew Randall, FIMMM, of Axe Valley Mining Consultants Ltd for Mining; Mr. Ian Jackson, FIMMM, of Bara Consulting for Mineral Processing, and Dr. Andrew Bamber, MCIM, of Bara Consulting Ltd for Economic Analysis.

Quarterly Information

The following table provides information for the eight fiscal quarters ended March 31, 2021:

	Mar. 31, 2021 (\$)	Dec. 31, 2020 (\$)	Sep. 30, 2020 (\$)	June 30, 2020 (\$)	Mar. 31, 2020 (\$)	Dec. 31, 2019 (\$)	Sep. 30, 2019 (\$)	June 30, 2019 (\$)
Exploration expenditures	195,667	252,523	367,993	218,019	76,917	125,001	32,762	28,489
General and administrative expenses	140,391	127,913	114,944	148,183	143,412	239,565	180,044	211,948
Loss for the period	(335,315)	(379,650)	(482,937)	(366,164)	(219,422)	(363,035)	(211,231)	(234,556)
Basic and diluted loss per share	(0.00)	(0.00)	(0.01)	(0.00)	(0.00)	(0.00)	(0.00)	(0.00)

Exploration expenditures for the first four quarters presented were lower than the four most recently completed quarters due to Tlamino Project exploration funding from Fortuna ceasing during the quarter ended March 31, 2020. General and administrative expenses for the quarter ended December 31, 2019 was higher than other quarters presented due to more legal services being used for corporate restructuring activities.

Results of Operations

Quarter ended March 31, 2021

For the quarter ended March 31, 2021, the Company had a net loss of \$335,315 compared to a net loss of \$219,422 for the quarter ended March 31, 2020, an increase of \$115,893. This increase is primarily due to exploration costs of \$195,667 during the current quarter compared to \$76,917 for the comparative quarter, an increase of \$118,750. Exploration costs for the comparative quarter were less than the current quarter due to expense recoveries relating to the Tlamino Project.

General and administrative expenses totaled \$140,391 for the current quarter compared to \$143,412 for the comparative quarter, an increase of \$3,021. During the current quarter, there was a notable cost increase of \$23,076 in shareholder communications which was due to the Company using more promotional services, and a share-based payment expense of \$12,131 whereas there was no such expense for the comparative quarter. The share-based payments expense relates to the granting of stock options during the current quarter. Notable cost decreases in the current quarter were \$20,425 in legal and accounting, \$13,450 in salaries and benefits, and \$7,000 in management fees. Legal and accounting fees for the current quarter were minimal while the comparative quarter required more legal services for corporate restructuring activities. Salaries and benefits costs were lower due to the Company's portion of shared personnel costs being reduced. Management fees were reduced as a result of services by Mill Street Services Ltd., a company controlled by the former Chairman of the Company, ending early in the current quarter.

Liquidity and Capital Resources

The Company's cash and cash equivalent resource as at March 31, 2021 was \$885,180 compared to \$1,287,143 as at December 31, 2020. As at March 31, 2021, the Company had current assets totaling \$895,856 and current liabilities totaling \$62,107, for working capital of \$833,749.

From 2017 until February 2020, the Company's operations on the Tlamino Project were largely funded by Fortuna. In July 2020, the Company completed a private placement financing for gross proceeds of \$2,000,000. These proceeds continue to be used to fund exploration work and general working capital requirements.

The Company expects its current capital resources to be sufficient to cover its corporate operating costs but not potential future mineral property acquisitions or significant exploration expenditures through the next twelve months. As such, the Company will seek to raise additional capital and believes it will be able to do so, but recognizes the uncertainty attached thereto. Actual funding requirements may vary from those planned due to a number of factors, including the progress of property acquisition and exploration activity.

Related Party Transactions

See Note 9 of the condensed interim consolidated financial statements for the three months ended March 31, 2021 for details of other related party transactions which occurred in the normal course of business.

Other Data

Additional information related to the Company is available for viewing at www.sedar.com.

Share Position and Outstanding Options and Warrants

As at the date of this Interim MD&A, the Company's outstanding share position is 134,789,032 common shares and the following stock options and share purchase warrants are outstanding:

No. of options	Exercise price	Expiry date
80,000	\$0.15	February 23, 2024
500,000	\$0.11	June 18, 2024
60,000	\$0.15	June 28, 2026
100,000	\$0.20	July 24, 2027
500,000	\$0.15	January 15, 2029
40,000	\$0.15	June 2, 2029
6,485,000	\$0.10	March 1, 2031
7,765,000		

No. of warrants	Exercise price	Expiry date
40,870,000	\$0.10	July 14, 2023

Accounting Policies and Basis of Presentation

The Company's significant accounting policies and future changes in accounting policies are presented in the audited consolidated financial statements for the year ended December 31, 2020.

Risks and Uncertainties

Global Pandemic

The Company faces risks related to health epidemics and other outbreaks of communicable diseases, which could significantly disrupt its operations and may materially and adversely affect its business and financial conditions. The Company's business could be adversely impacted by the effects of the COVID-19 coronavirus which was declared a global pandemic by the World Health Organization in March 2020.

The international governmental restrictions imposed due to COVID-19 have led to significant restrictions on travel, temporary business closures, quarantines, global stock market volatility and a general reduction in consumer activity. Such public health restrictions can result in operating and supply chain delays and disruptions, global stock market and financial market volatility, declining trade and market sentiment, reduced movement of people and labour shortages, and travel and shipping disruption and shutdowns, all of which could affect commodity prices, interest rates, credit ratings, credit risk and inflation.

Mineral Property Exploration and Mining Risks

The business of mineral deposit exploration and extraction involves a high degree of risk. Few properties that are explored ultimately become producing mines. At present, none of the Company's properties has a known commercial ore deposit. The main operating risks include securing adequate funding to maintain and advance exploration

properties; ensuring ownership of and access to mineral properties by confirmation that option agreements, claims and leases are in good standing; and obtaining permits for drilling and other exploration activities.

Joint Venture Funding Risk

The Company's strategy includes seeking partners through joint ventures to fund exploration and project development. The main risk of this strategy is that funding partners may not be able to raise sufficient capital in order to satisfy exploration and other expenditure terms in a particular joint venture agreement. As a result, exploration and development of one or more of the Company's property interests may be delayed depending on whether the Company can find a partner or has enough capital resources to fund the exploration and development on its own.

Commodity Price Risk

The Company is exposed to commodity price risk. Declines in the market price of gold, base metals and other minerals may adversely affect the Company's ability to raise capital or attract joint venture partners in order to fund its ongoing operations. Commodity price declines could also reduce the amount the Company would receive on the disposition of one of its mineral properties to a third party.

Financing and Share Price Fluctuation Risks

The Company has limited financial resources, has no source of operating cash flow and has no assurance that additional funding will be available to it for further exploration and development of its projects. Further exploration and development of one or more of the Company's projects may be dependent upon the Company's ability to obtain financing through equity or debt financing or other means. Failure to obtain this financing could result in delay or indefinite postponement of further exploration and development of its projects which could result in the loss of one or more of its properties.

Securities markets have at times in the past experienced a high degree of price and volume volatility, and the market price of securities of many companies, particularly those considered to be exploration stage companies such as the Company, have experienced wide fluctuations in share prices which have not necessarily been related to their operating performance, underlying asset values or prospects. There can be no assurance that these kinds of share price fluctuations will not occur in the future, and if they do occur, how severe the impact may be on the Company's ability to raise additional funds through equity issues and corresponding effect on the Company's financial position.

Political, Regulatory and Currency Risks

The Company's mineral properties are located in economically stressed, but politically stable European countries and consequently may be subject to a higher level of risk compared to less economically stressed countries. Operations, the status of mineral property rights, title to the properties and the recoverability of amounts shown for mineral properties in such nations can be affected by changing economic, regulatory and political situations. The Company's equity financings are sourced in Canadian dollars but for the most part it incurs its exploration expenditures in British pound sterling, Euros, and Serbian dinars. At this time there are no currency hedges in place. Therefore, a weakening of the Canadian dollar against the British pound sterling, Euro, or Serbian dinar could have an adverse impact on the amount of exploration conducted.

Insured and Uninsured Risks

In the course of exploration, development and production of mineral properties, the Company is subject to a number of hazards and risks in general, including adverse environmental conditions, operational accidents, labor disputes, unusual or unexpected geological conditions, changes in the regulatory environment and natural phenomena such as inclement weather conditions, floods, and earthquakes. Such occurrences could result in damage to the Company's properties or facilities and equipment, personal injury or death, environmental damage to properties of the Company or others, delays, monetary losses and possible legal liability.

Although the Company may maintain insurance to protect against certain risks in such amounts as it considers reasonable, its insurance may not cover all the potential risks associated with its operations. The Company may also be unable to maintain insurance to cover these risks at economically feasible premiums or for other reasons. Should

such liabilities arise, they could reduce or eliminate future profitability and result in increased costs, have a material adverse effect on the Company's results and a decline in the value of the securities of the Company.

Environmental and Social Risks

The activities of the Company are subject to environmental regulations issued and enforced by government agencies. Environmental legislation is evolving in a manner that will require stricter standards and enforcement and involve increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects, and a heightened degree of responsibility for companies and their officers, directors and employees. There can be no assurance that future changes in environmental regulation, if any, will not adversely affect the Company's operations. Environmental hazards may exist on properties in which the Company holds interests which are unknown to the Company at present. Social risks are not considered significant in the Company's areas of operations.

Competition

The Company will compete with many companies and individuals that have substantially greater financial and technical resources than the Company for the acquisition and development of its projects as well as for the recruitment and retention of qualified employees.
