FOR IMMEDIATE RELEASE**

Sable Resources Ltd – Commences Drilling on Baker Project

Vancouver, British Columbia, October 10, 2017 - Sable Resources Ltd. ("Sable" or the "Company") (TSXV: SAE) has commenced a diamond drill program on the Company's 100% owned Baker Project located in north-central British Columbia.

The drilling will test targets developed from a phase 1 work program announced August 1st, 2017 which included property wide stream sediment sampling and a high-resolution helicopter borne ZTEM™ ("Z-Axis Tipper Electromagnetic") geophysical survey, in addition to a deep 10.5 line-km induced polarization geophysical survey over a select portion of the central Baker system.

The drilling is anticipated to occur across a 4 kilometer length of highly prospective ground centered on the past producing Baker mine, and target coincident magnetic, induced polarization, and radiometric geophysical, and copper-gold geochemical anomalies within permissive geology for copper-gold porphyry deposits.

Drilling commenced on October 6th, and a second drill is being added to test as many targets as possible before the onset of winter conditions will force the program to terminate.

Bill Yeomans, P.Geo, is the Company's Qualified Person with respect to the Baker Project and has reviewed and approved this press release.

About Sable Resources Ltd.

Sable owns 142 square kilometers of mineral tenure and mining leases in the Toadoggone mining district, including the past-producing Baker and Shasta mines, and the 250-ton-per-day Baker mill and tailings facility.

We seek safe harbor
